

TITLE OF THE INVENTION
Amidopyrazole Derivative

TECHNICAL FIELD

[0001]

This invention relates to a pyrazole derivative which has platelet coagulation-inhibiting action.

BACKGROUND ART

[0002]

Platelets play an important role in deterring hemorrhage by way of coagulating and forming thrombus once the blood vessel is damaged. Platelets, however, are prone to aggregate and trigger thrombus and embolus when vascular endothelium is injured or the blood vessel is narrowed as in the case of arteriosclerosis, and thus are known to be responsible for the occurrence of ischemic diseases such as myocardial infarction, angina pectoris, ischemic cerebrovascular disorder and peripheral vascular disease. For such reasons, platelet coagulation inhibitors are administered for prevention and treatment of such ischemic diseases. Aspirin, among other things, has been used as a platelet coagulation inhibitor, and the effects of aspirin have been demonstrated by APT (Antiplatelet Trialists' Collaboration) in which clinical test results obtained by administering aspirin to 1,000,000 patients had been subjected to metaanalysis (See Non-patent Document 1). Aspirin, however, is known to cause side effects such as hemorrhage in gastrointestinal tract and the like, namely, the so-called "aspirin-induced

ulcer", and the side effect is not dose-dependent and occurs at a rate of about 1 per 100 patients (See Non-patent Document 2).

[0003]

The inhibitory effect of aspirin on platelet coagulation is known to be based on the activity to inhibit cyclooxygenase. Cyclooxygenases include cyclooxygenase-1 (COX-1) and cyclooxygenase-2 (COX-2), and aspirin specifically inhibits COX-1 at a low dose resulting in the platelet coagulation. The inhibition of COX-1 also causes the aspirin-induced ulcer (See Non-patent Documents 3 and 4). In addition, nonsteroidal antiinflammatory drugs are known to exhibit antiinflammatory action by selectively inhibiting COX-2.

[0004]

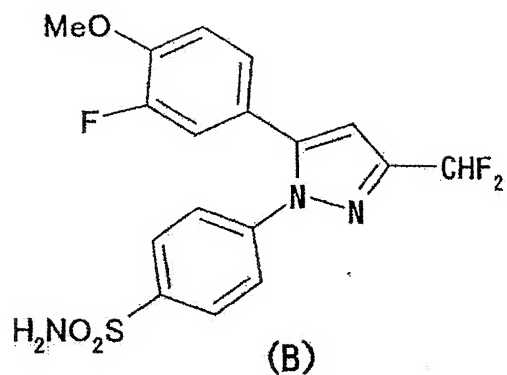

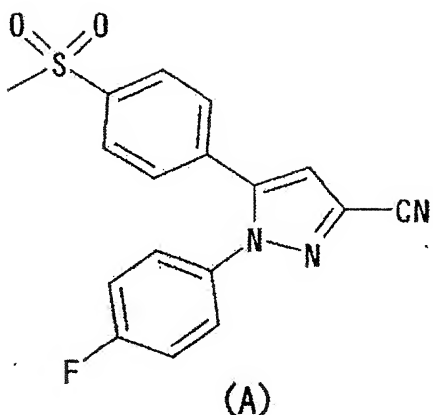

As described above, despite usefulness of the aspirin as a platelet coagulation inhibitor, it causes a gastrointestinal dysfunction as its side effect due to the COX-1-inhibiting action which is the action mechanism of inhibition of platelet coagulation, and there is a strong demand for new platelet coagulation inhibitors with no COX-1-inhibiting activity.

[0005]

In the meanwhile, as pyrazole derivatives having antithrombotic activity have been known compound (A) (see Patent Document 1 and Non-patent Document 5) and compound (B) (see Patent Document 2).

[DISCLOSURE OF THE INVENTION]

[PROBLEM TO BE SOLVED BY THE INVENTION]

[0008]

Compound (A), however, exhibits IC_{50} value of $5.3 \times 10^{-6} M$ against collagen-induced platelet coagulation with even stronger inhibitory activity against COX-2 (IC_{50} , $2.4 \times 10^{-7} M$). The situation is similar for Compound (B). The platelet coagulation inhibitory activity of compound

(B) is not so potent compared with its inhibitory activity against COX-2. As described above, inhibition of COX-2 may lead to an antiinflammatory action, and the inhibition of COX-2 is not necessarily favorable as a platelet coagulation inhibitor. In view of the situation as described above, an object of the present invention is to provide a strong inhibitor for platelet coagulation which does not inhibit COX-1 nor COX-2.

[MEANS TO SOLVE THE PROBLEM]

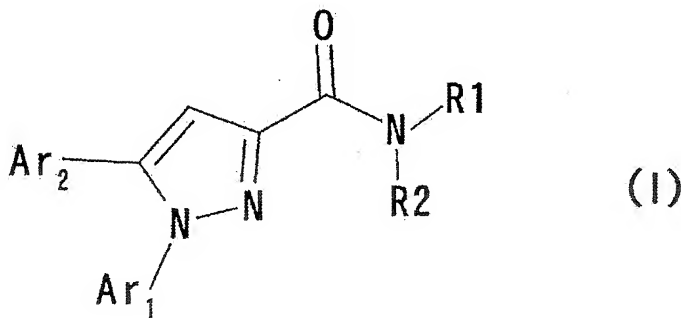

[0009]

The present inventors have made an extensive study in search of such platelet coagulation inhibitor, and found that a pyrazole derivative represented by the following general formula (I) exhibits strong platelet coagulation inhibitory activity without inhibiting COX-1 and COX-2 to complete the invention.

The present invention provides a compound represented by general formula (I):

[0010]

[Chem 2]

[0011]

wherein Ar₁ and Ar₂ independently represent a 5- or 6-membered aromatic

heterocyclic group optionally substituted with 1 to 3 substituents, or a phenyl group optionally substituted with 1 to 3 substituents, with the proviso that, when Ar₁ is a 5- or 6-membered aromatic heterocyclic group substituted with 1 to 3 substituents, Ar₂ is a 5- or 6-membered aromatic heterocyclic group optionally substituted with 1 to 3 substituents, and when Ar₁ is an unsubstituted 5- or 6-membered aromatic heterocyclic group, Ar₂ is a 5- or 6-membered aromatic heterocyclic group substituted with 1 to 3 substituents or a phenyl group substituted with a carbamoyl group having 1 or 2 substituents or with a lower alkyl group having 1 or 2 substituents, and when Ar₁ is a phenyl group optionally substituted with 1 to 3 substituents, Ar₂ is a 5- or 6-membered aromatic heterocyclic group substituted with 1 to 3 substituents;

R₁ represents a lower acyl group, a lower alkoxy carbonyl group, a lower alkoxy group, a lower alkyl group optionally substituted with 1 or 2 substituents, a carbamoyl group optionally substituted with 1 or 2 substituents, an oxamoyl group optionally substituted with 1 or 2 substituents, an amino group optionally substituted with 1 or 2 substituents, a 4- to 7-membered alicyclic heterocyclic group optionally substituted with 1 or 2 substituents, a phenyl group optionally substituted with 1 to 3 substituents, or a 5- or 6-membered aromatic heterocyclic group optionally substituted with 1 to 3 substituents; and

R₂ represents a hydrogen atom or a lower alkyl group optionally substituted with 1 or 2 substituents; or
a salt thereof, or a solvate thereof.

[0012]

This invention also provides a drug comprising the compound represented by the general formula (I), a salt thereof, or a solvate thereof.

[0013]

This invention also provides a prophylactic and/or therapeutic composition for an ischemic disease comprising the compound represented by the general formula (I), a salt thereof, or a solvate thereof.

[EFFECTS OF THE INVENTION]

[0014]

The compound (I) of the present invention, the salt or the solvate thereof, or the solvate of such salt potentially inhibit platelet coagulation, and hence, accordingly, also inhibits thrombogenesis without inhibiting COX-1 and COX-2. Therefore, it is useful as a prophylactic and/or therapeutic agent for ischemic diseases caused by thrombus or embolus such as myocardial infarction, angina pectoris (chronic stable angina, unstable angina, etc.), ischemic cerebrovascular disorder (transient ischemic attack (TIA), cerebral infarction, etc.), peripheral vascular disease, embolism after replacement with an artificial vessel, thrombotic embolism after coronary artery intervention (coronary artery bypass grafting (CAGB), percutaneous transluminal coronary angioplasty (PTCA), stent placement, etc.), diabetic retinopathy and nephropathy, and embolism after replacement with an artificial heart valve, and is also useful as a prophylactic and/or therapeutic agent for thrombus and embolus associated with vascular operation, blood extracorporeal circulation, and the like.

[BEST MODE FOR CARRYING OUT THE INVENTION]

[0015]

Next, the substituents in the general formula (I) as described above are described.

[0016]

The aromatic heterocyclic groups represented by Ar_1 and Ar_2 are independently a 5- or 6-membered aromatic heterocyclic group, and examples of such groups include pyridyl group, pyridazinyl group, pyrimidinyl group, pyrazinyl group, furyl group, thienyl group, pyrrolyl group, pyrazolyl group, imidazolyl group, triazolyl group, oxazolyl group, isoxazolyl group, thiazolyl group, pyrazolyl group, and thiadiazolyl group.

Examples of substituents in the aromatic heterocyclic groups and the phenyl group represented by Ar_1 and Ar_2 are (1) a lower alkyl group optionally substituted with 1 or 2 substituents, (2) a halogeno group, (3) hydroxyl group, (4) cyano group, (5) an optionally substituted lower alkoxy group, (6) an aralkyloxy group, (7) a lower alkylthio group, (8) a lower alkoxy carbonyl group, (9) carboxyl group, (10) a lower alkylsulfonyl group, (11) an amino group optionally substituted with 1 or 2 substituents, (12) a carbamoyl group optionally substituted with 1 or 2 substituents, (13) an aminosulfonyl group optionally substituted with 1 or 2 lower alkyl groups, (14) a 4- to 7-membered alicyclic heterocyclic group optionally substituted with 1 or 2 substituents, (15) an optionally substituted lower alkenyl group, (16) an optionally substituted lower alkynyl group, and (17) an optionally substituted lower alkanoyl group, as described below.

[0017]

(1) The lower alkyl group optionally substituted with 1 or 2 substituents which is the substituent of the aromatic heterocyclic group or the phenyl group means a straight, branched, or cyclic C₁₋₆ alkyl group which is optionally substituted with one group or the same or different two groups selected from the group consisting of (a) hydroxyl group, (b) halogeno groups, (c) straight, branched, or cyclic C₁₋₆ alkoxy groups, (d) amino groups optionally substituted with 1 or 2 substituents, (e) carbamoyl groups optionally substituted with C₁₋₆ alkyl group, (f) alkoxycarbonyl groups containing 2 to 7 carbon atoms in total, (g) carboxyl group, and (h) alicyclic-carbonyl groups. The cyclic alkyl group contains 3 to 6 carbon atoms.

[0018]

Examples of the halogeno groups (b) include fluoro group, chloro group, and bromo group. Examples of the C₁₋₆ alkoxy group (c) include methoxy group, ethoxy group, propoxy group, isopropoxy group, butoxy group, isobutoxy group, pentoxy group, and cyclopentyloxy group.

[0019]

Examples of the amino groups optionally substituted with 1 or 2 substituents (d) include, in addition to unsubstituted amino group, aminos group substituted with 1 or 2 substituents selected from (i) straight, branched, or cyclic C₁₋₆ alkyl groups, (ii) C₂₋₇ alkanoyl groups, (iii) arylcarbonyl groups, (iv) aliphatic heterocyclic-carbonyl groups, (v) alkoxycarbonyl groups containing 2 to 7 carbon atoms in total, (vi) aryloxycarbonyl groups, (vii) carbamoyls groups optionally substituted with a straight, branched or cyclic C₁₋₆ alkyl group or an alicyclic heterocyclic group, (viii) hydroxyl group, (ix) straight,

branched or cyclic C₁₋₆ alkoxy groups, (x) straight, branched or cyclic C₁₋₆ alkylsulfonyl groups, and (xi) arylsulfonyl groups.

[0020]

Examples of the C₁₋₆ alkyl group (i) include methyl group, ethyl group, propyl group, isopropyl group, primary, secondary, or tertiary butyl group, pentyl group, hexyl group, cyclopropyl group, cyclobutyl group, cyclopentyl group, cyclohexyl group, cyclopropylmethyl group, and cyclopentylmethyl group. Examples of the C₂₋₇ alkanoyl group (ii) include acetyl group, propionyl group, butyl group, butanoyl group, and pentanoyl group. Examples of the arylcarbonyl group (iii) include arylcarbonyl groups containing 7 to 15 carbon atoms in total such as benzoyl group and naphthylcarbonyl group. Examples of the aliphatic heterocyclic-carbonyl group (iv) include 4- to 7-membered aliphatic heterocyclic-carbonyl groups such as azetidinecarbonyl group, pyrrolidinecarbonyl group, piperidinecarbonyl group, piperazinecarbonyl group, hexahydropyridazinecarbonyl group, tetrahydropyrimidinecarbonyl group, pyrazolidinecarbonyl group, imidazolidinecarbonyl group, homopiperazinecarbonyl group, morpholinecarbonyl group, and thiomorpholinecarbonyl group.

[0021]

Examples of the alkoxycarbonyl group containing 2 to 7 carbon atoms in total (v) include methoxycarbonyl group, ethoxycarbonyl group, propoxycarbonyl group, and butoxycarbonyl group. Examples of the aryloxy carbonyl group (vi) include C₆₋₁₄ aryloxy carbonyl groups such as phenyloxy carbonyl group and naphthyloxy carbonyl group.

[0022]

Examples of the carbamoyl group optionally substituted with an alkyl group or an alicyclic heterocyclic group include, in addition to unsubstituted carbamoyl group, methylcarbamoyl group, ethylcarbamoyl group, propylcarbamoyl group, isopropylcarbamoyl group, primary, secondary, or tertiarybutylcarbamoyl group, pentylcarbamoyl group, hexylcarbamoyl group, cyclopropylcarbamoyl group, cyclobutylcarbamoyl group, cyclopentylcarbamoyl group, cyclohexylcarbamoyl group, cyclopropylmethylcarbamoyl group, cyclopentylmethylcarbamoyl group, dimethylcarbamoyl group, methylethylcarbamoyl group, diethylcarbamoyl group, methylpropylcarbamoyl group, methylisopropylcarbamoyl group, methylcyclopropylcarbamoyl group, methylcyclopropylmethylcarbamoyl group, as well as 4- to 7-membered alicyclic heterocyclic carbamoyl groups such as azetidine carbamoyl group, pyrrolidine carbamoyl group, piperidine carbamoyl group, piperazine carbamoyl group, hexahydropyridazine carbamoyl group, tetrahydropyrimidine carbamoyl group, pyrazolidine carbamoyl group, imidazolidine carbamoyl group, homopiperazine carbamoyl group, morpholine carbamoyl group, and thiomorpholine carbamoyl group. Examples of the alkoxy group (ix) include methoxy group, ethoxy group, propoxy group, isopropoxy group, butoxy group, isobutoxy group, pentoxy group, and cyclopentyloxy group. Examples of the alkylsulfonyl group (x) include methylsulfonyl group, ethylsulfonyl group, propylsulfonyl group, isopropylsulfonyl group, butylsulfonyl group, isobutylsulfonyl group, pentylsulfonyl group, and cyclopentylsulfonyl group. Examples of the arylsulfonyl group (xi) include C₆₋₁₄ arylsulfonyl groups such as phenylsulfonyl group, p-toluene sulfonyl group, and naphthylsulfonyl group.

[0023]

Examples of the alkyl group which is optionally substituted with the groups (i) to (xi) include methyl group, ethyl group, propyl group, isopropyl group, primary, secondary, or tertiary butyl group, pentyl group, hexyl group, cyclopropyl group, cyclobutyl group, cyclopentyl group, cyclohexyl group, cyclopropylmethyl group, and cyclopentylmethyl group.

[0024]

Examples of substituents (1) include methyl group, ethyl group, propyl group, isopropyl group, primary, secondary, or tertiary butyl group, pentyl group, hexyl group, cyclopropyl group, cyclobutyl group, cyclopentyl group, cyclohexyl group, cyclopropylmethyl group, cyclopentylmethyl group, hydroxymethyl group, 2-hydroxyethyl group, 3-hydroxypropyl group, 2-hydroxypropyl group, 2-fluoroethyl group, 3-fluoropropyl group, 2-fluoropropyl group, 2-fluorocyclopropyl group, 2-chloroethyl group, 3-chloropropyl group, 2-chloropropyl group, trifluoromethyl group, methoxymethyl group, ethoxymethyl group, propoxymethyl group, isopropoxymethyl group, 2-methoxyethyl group, 3-methoxypropyl group, aminomethyl group, 2-aminoethyl group, 1-aminoethyl group, 3-aminopropyl group, 2-aminopropyl group, methylaminomethyl group, 2-(methylamino)ethyl group, 1-(methylamino)ethyl group, 3-(methylamino)propyl group, 2-(methylamino)propyl group, dimethylaminomethyl group, 2-(dimethylamino)ethyl group, 1-(dimethylamino)ethyl group, 3-(dimethylamino)propyl group, 2-(dimethylamino)propyl group, 2-(methylethylamino)ethyl group, 1-(methylethylamino)ethyl group, 1-aminocyclopropyl group, 1-(methylamino)cyclopropyl group,

1-(ethylamino)cyclopropyl group, 1-(dimethylamino)cyclopropyl group, 1-(diethylamino)cyclopropyl group, 1-(methylethylamino)cyclopropyl group, acetylaminomethyl group, 2-acetylaminomethyl group, propionylaminomethyl group, 2-propionylaminomethyl group, benzoylaminomethyl group, 2-(benzoylamino)ethyl group, pyrrolidinecarbonylaminomethyl group, piperidinecarbonylaminomethyl group, 2-(pyrrolidinecarbonylamino)ethyl group, 2-(piperidinecarbonylamino)ethyl group, methoxycarbonylaminomethyl group, ethoxycarbonylaminomethyl group, 2-(methoxycarbonylamino)ethyl group, 2-(ethoxycarbonylamino)ethyl group, phenyloxycarbonylaminomethyl group, 2-(phenyloxycarbonyl)ethyl group, carbamoylaminomethyl group, N-methylcarbamoylaminomethyl group, N-ethylcarbamoylaminomethyl group, 2-(carbamoylamino)ethyl group, 2-(N-methylcarbamoylamino)ethyl group, 2-(N-ethylcarbamoylamino)ethyl group, hydroxyaminomethyl group, 2-(hydroxyamino)ethyl group, methoxyaminomethyl group, 2-(methoxyamino)ethyl group, 2-(ethoxy amino)ethyl group, N-methyl-N-methoxyaminomethyl group, 2-(N-methyl-N-methoxyamino)ethyl group, methylsulfonylaminomethyl group, ethylsulfonylaminomethyl group, 2-(methylsulfonylamino)ethyl group, 2-(ethylsulfonylamino)ethyl group, phenylsulfonylaminomethyl group, p-toluene sulfonylaminomethyl group, 2-(phenylsulfonylamino)ethyl group, 2-(p-toluenesulfonylamino)ethyl group, carbamoylmethyl group, methylcarbamoylmethyl group, 2-carbamoyl ethyl group, 2-(methylcarbamoyl)ethyl group, methoxycarbonylmethyl group, methoxycarbonyl ethyl group,

carboxymethyl group, carboxyethyl group, pyrrolidinecarbonylmethyl group, and pyrrolidinecarbonylethyl group.

[0025]

Examples of the halogeno groups (2) include fluoro group, chloro group, and bromo group.

[0026]

Examples of the optionally substituted lower alkoxy group (5) include straight, branched or cyclic C₁₋₆ alkoxy groups optionally substituted with 1 or 2 substituents selected from carbamoyl group, lower alkoxycarbonyl groups, carboxyl group, and alicyclic heterocyclic carbonyl groups. Examples of the lower alkoxycarbonyl groups are as mentioned above in (v). Examples of the alicyclic heterocyclic carbonyl groups are as mentioned above in (iv). Examples of substituents (5) include methoxy group, ethoxy group, propoxy group, isopropoxy group, butoxy group, isobutoxy group, pentoxy group, cyclopentyloxy group, carbamoylmethoxy group, carbamoylethoxy group, methoxycarbonylmethoxy group, methoxycarbonylethoxy group, ethoxycarbonylmethoxy group, ethoxycarbonylethoxy group, carboxymethoxy group, carboxyethoxy group, pyrrolidinecarbonylmethoxy group, and pyrrolidinecarbonylethoxy group.

[0027]

The aralkyloxy group (6) is a group consisting of a C₆₋₂₀ aryl group and a straight, branched or cyclic C₁₋₆ alkoxy group, and examples of the aralkyloxy groups include benzyloxy group and phenethyloxy group.

The lower alkylthio group (7) means a straight, branched or cyclic C₁₋₆ alkylthio group, and examples thereof include methylthio group,

ethylthio group, propylthio group, isopropylthio group, butylthio group, isobutylthio group, pentylthio group, and cyclopentylthio group.

The lower alkoxy carbonyl group (8) means an alkoxy carbonyl group containing 2 to 7 carbon atoms in total, and examples include methoxy carbonyl group, ethoxy carbonyl group, propoxy carbonyl group, and butoxy carbonyl group.

The lower alkylsulfonyl group (10) means a straight, branched or cyclic C₁₋₆ alkylsulfonyl group, and examples thereof include methanesulfonyl group, ethanesulfonyl group, and trifluoromethanesulfonyl group.

[0028]

The amino group optionally substituted with 1 or 2 substituents (11) means, in addition to unsubstituted amino group, amino groups substituted with 1 or 2 of the lower alkyl groups as described above, lower alkanoylamino groups, lower alkoxy carbonylamino groups, or ureido group optionally substituted with 1 or 2 of the lower alkyl groups as described above. Examples of the amino group substituted with 1 or 2 of the lower alkyl groups as described above include methylamino group, ethylamino group, propylamino group, isopropylamino group, cyclopropylamino group, butylamino group, isobutylamino group, cyclopentylmethylamino group, dimethylamino group, diethylamino group, dipropylamino group, dibutylamino group, N-methyl-N-ethylamino group, N-ethyl-N-propylamino group, and N-methyl-N-cyclopentylmethylamino group. The lower alkanoylamino group means an amino group substituted with a straight or branched C₂₋₆ alkanoyl group, and examples thereof include acetylamino group and propionylamino group. The lower

alkoxycarbonylamino group means an amino group substituted a straight or branched C₂₋₆ lower alkoxycarbonyl group, and examples thereof include methoxycarbonylamino group and ethoxycarbonylamino group. Examples of the ureido group optionally substituted with 1 or 2 of the lower alkyl groups include aminocarbonylamino group, N1-methylaminocarbonylamino group, N1-ethylaminocarbonylamino group, N3-methylaminocarbonylamino group, N1,N1-dimethylaminocarbonylamino group, N1,N3-dimethylaminocarbonylamino group, and N1-methyl-N3-ethylaminocarbonylamino group.

[0029]

Examples of the carbamoyl group optionally substituted with 1 or 2 substituents (12) include, in addition to unsubstituted carbamoyl group, carbamoyl groups substituted with 1 or 2 of the lower alkyl groups as described above, and examples thereof include methylcarbamoyl group, ethylcarbamoyl group, dimethylcarbamoyl group, and methylethylcarbamoyl group.

[0030]

The aminosulfonyl group optionally substituted with 1 or 2 substituents (13) means, in addition to unsubstituted aminosulfonyl group, aminosulfonyl group substituted with 1 or 2 of the lower alkyl groups as described above, and examples thereof include methylaminosulfonyl group, ethylaminosulfonyl group, propylaminosulfonyl group, isopropylaminosulfonyl group, primary, secondary, or tertiary butylaminosulfonyl group, cyclopropylaminosulfonyl group, cyclobutylaminosulfonyl group, cyclopentylaminosulfonyl group, cyclohexylaminosulfonyl group,

cyclopentylmethylaminosulfonyl group, dimethylaminosulfonyl group, and diethylaminosulfonyl group.

[0031]

Examples of the 4- to 7-membered aliphatic heterocyclic group in the 4- to 7-membered alicyclic heterocyclic group optionally substituted with 1 or 2 substituents (14) include azetidiny group, pyrrolidinyl group, piperidinyl group, piperadinyl group, hexahydropyridazinyl group, tetrahydropyrimidinyl group, pyrazolidinyl group, imidazolidinyl group, homopiperadinyl group, morpholinyl group, and thiomorpholinyl group.

These groups may be substituted with a substituent such as hydroxyl group, oxo group, carboxyl group, sulfo group, cyano group, and nitro group, as well as the halogeno group, the lower alkoxy group, the alkylsulfonyl group, the alkyl group optionally substituted with 1 or 2 substituents, the amino group optionally substituted with 1 or 2 substituents, the carbamoyl group optionally substituted with 1 or 2 substituents, the lower acyl group, or the aminosulfonyl group optionally substituted with 1 or 2 substituents as described above.

[0032]

The optionally substituted lower alkenyl group (15) includes a straight, branched or cyclic C_{2-6} alkenyl group optionally substituted with 1 or 2 substituents selected from carbamoyl group, lower alkoxy carbonyl groups, carboxyl group, and alicyclic heterocyclic carbonyl groups. Examples of the lower alkoxy carbonyl groups include those mentioned above in (v). Exemplary alicyclic heterocyclic carbonyl groups are as mentioned above for (iv). Examples of the group (15) include vinyl group, 2-propenyl group, 2-butenyl group, 3-butenyl

group, pentenyl group, cyclopentenyl group, carbamoylvinyl group, carbamoylpropenyl group, methoxycarbonylvinyl group, methoxycarbonylpropenyl group, ethoxycarbonylvinyl group, ethoxycarbonylpropenyl group, carboxyvinyl group, carboxypropenyl group, pyrrolidinecarbonylvinyl group, and pyrrolidinecarbonylpropenyl group.

[0033]

The optionally substituted lower alkynyl group (16) includes a straight, branched or cyclic C_{2-6} alkynyl group optionally substituted with 1 or 2 substituents selected from carbamoyl group, lower alkoxy carbonyl groups, carboxyl group, and alicyclic heterocyclic carbonyl groups. Examples of the lower alkoxy carbonyl groups include those mentioned above in (v). Examples of the alicyclic heterocyclic carbonyl groups include those mentioned above in (iv). Examples of the group (16) include ethynyl group, 2-propynyl group, carbamoylethynyl group, carbamoylpropynyl group, methoxycarbonylethynyl group, methoxycarbonylpropynyl group, ethoxycarbonylethynyl group, ethoxycarbonylpropynyl group, carboxyethynyl group, carboxypropynyl group, pyrrolidinecarbonylethynyl group, and pyrrolidinecarbonylpropynyl group.

[0034]

The optionally substituted lower alkanoyl group (17) includes a straight, branched or cyclic C_{2-7} alkanoyl group optionally substituted with 1 or 2 substituents selected from carbamoyl group, lower alkoxy carbonyl groups, carboxyl group, and alicyclic heterocyclic carbonyl groups. Examples of the lower alkoxy carbonyl groups include

those mentioned above in (v). Examples of the alicyclic heterocyclic carbonyl groups include those mentioned above in (iv). Examples of the group (17) include acetyl group, propionyl group, butylyl group, pentanoyl group, cyclopropylcarbonyl group, cyclobutylcarbonyl group, cyclopentylcarbonyl group, carbamoylacetyl group, carbamoylpropionyl group, methoxycarbonylacetyl group, methoxycarbonylpropanoyl group, ethoxycarbonylacetyl group, ethoxycarbonylpropanoyl group, carboxyacetyl group, carboxypropanoyl group, pyrrolidinecarbonylacetyl group, and pyrrolidinecarbonylpropanoyl group.

[0035]

The substituent of the aromatic heterocyclic group or the phenyl group, Ar_1 , is preferably located at para position to the pyrazole ring.

[0036]

In the compound (I) of the present invention, when Ar_1 is a 5- or 6-membered aromatic heterocyclic group having 1 to 3 substituents, Ar_2 is a 5- or 6-membered aromatic heterocyclic group optionally substituted with 1 to 3 substituents; and when Ar_1 is an unsubstituted 5- or 6-membered aromatic heterocyclic group, Ar_2 is a 5- or 6-membered aromatic heterocyclic group substituted with 1 to 3 substituents, or phenyl group having carbamoyl group substituted with 1 or 2 substituents or having a lower alkyl group substituted with 1 or 2 substituents; and when Ar_1 is phenyl group optionally substituted with 1 to 3 substituents, Ar_2 is a 5- or 6-membered aromatic heterocyclic group substituted with 1 to 3 substituents.

[0037]

Next, substituents R1 and R2 are described.

[0038]

The lower acyl group means an acyl group having a straight, branched or cyclic C₁₋₆ alkyl group, and examples thereof include formyl group, acetyl group, propionyl group, primary and secondary butyl group, pivaloyl group, cyclopropylcarbonyl group, cyclobutylcarbonyl group, cyclopentylcarbonyl group, cyclohexylcarbonyl group, cyclopropylmethylcarbonyl group, cyclobutylmethylcarbonyl group, and cyclopentylmethylcarbonyl group.

[0039]

The lower alkoxycarbonyl group means an alkoxycarbonyl group having a straight, branched or cyclic C₁₋₆ alkyl group, and examples thereof include methoxycarbonyl group, ethoxycarbonyl group, propoxycarbonyl group, isopropoxycarbonyl group, primary, secondary, or tertiary butoxycarbonyl group, cyclobutyloxycarbonyl group, cyclopentyloxycarbonyl group, cyclohexyloxycarbonyl group, and cyclopentylmethyloxycarbonyl group.

[0040]

The lower alkoxy group means a straight, branched or cyclic C₁₋₆ alkoxy group, examples of which include methoxy group, ethoxy group, propoxy group, isopropoxy group, butoxy group, isobutoxy group, pentoxy group, and cyclopentyloxy group.

[0041]

The lower alkyl group optionally substituted with 1 or 2 substituents means a straight, branched or cyclic C₁₋₆ alkyl group which is optionally substituted with one group or the same or different two groups selected from hydroxyl group, halogeno groups, carboxyl group,

sulfo group, straight, branched or cyclic C₁₋₃ alkoxy groups, alkoxycarbonyl groups having a straight, branched or cyclic C₁₋₃ alkyl group, amino groups optionally substituted with 1 or 2 straight, branched or cyclic C₁₋₃ alkyl groups, 4- to 7-membered aliphatic heterocyclic groups optionally substituted with 1 or 2 substituents, carbamoyl groups optionally substituted with 1 or 2 straight, branched or cyclic C₁₋₃ alkyl groups, ureido groups optionally substituted with 1 or 2 straight, branched or cyclic C₁₋₃ alkyl groups, phenyl groups optionally substituted with 1 to 3 substituents, 5- or 6-membered aromatic heterocyclic groups optionally substituted with 1 to 3 substituents, and C₃₋₆ cyclic alkyl groups. The cyclic alkyl group contains 3 to 6 carbon atoms.

[0042]

Examples of such groups include methyl group, ethyl group, propyl group, isopropyl group, primary, secondary, or tertiary butyl group, pentyl group, neopentyl group, hexyl group, cyclopropyl group, cyclobutyl group, cyclopentyl group, cyclohexyl group, bicyclo[2.2.1]pentyl group, cyclopropylmethyl group, cyclopentylmethyl group, hydroxymethyl group, 2-hydroxyethyl group, 3-hydroxypropyl group, 2-hydroxypropyl group, 1-hydroxymethyl cyclopentyl group, 1-hydroxymethyl cyclohexyl group, 2-fluoroethyl group, 3-fluoropropyl group, 2-fluoropropyl group, 2-fluorocyclopropyl group, 3-fluorocyclopentyl group, 4-fluorocyclohexyl group, 4,4-difluorocyclohexyl group, 2-chloroethyl group, 3-chloropropyl group, 2-chloropropyl group, trifluoromethyl group, carboxymethyl group, 2-carboxyethyl group, 3-carboxypropyl group, 2-carboxypropyl group, sulfomethyl group,

2-sulfoethyl group, 1-sulfoethyl group, 3-sulfopropyl group,
 2-sulfopropyl group, methoxymethyl group, ethoxymethyl group,
 propoxymethyl group, isopropoxymethyl group, 2-methoxyethyl group,
 3-methoxypropyl group, 3-methoxycyclopropyl group, 3-methoxy
 cyclopentyl group, 4-methoxycyclohexyl group, methoxycarbonylmethyl
 group, ethoxycarbonylmethyl group, propoxycarbonylmethyl group,
 2-methoxycarbonylethyl group, 2-ethoxycarbonylethyl group,
 2-propoxycarbonylethyl group, aminomethyl group, 2-aminoethyl group,
 1-aminoethyl group, 3-aminopropyl group, 2-aminopropyl group,
 methylaminomethyl group, 2-(methylamino)ethyl group,
 1-(methylamino)ethyl group, 3-(methylamino)propyl group,
 2-(methylamino)propyl group, dimethylaminomethyl group,
 2-(dimethylamino)ethyl group, 1-(dimethylamino)ethyl group,
 3-(dimethylamino)propyl group, 2-(dimethylamino)propyl group,
 2-(methylethylamino)ethyl group, 1-(methylethylamino)ethyl group,
 tetrahydrofuryl group, tetrahydropyranyl group, pyrrolidinyl group,
 1-methylpyrrolidinyl group, 1-ethylpyrrolidinyl group, piperidino
 group, piperadino group, N-methylpiperazino group, carbamoylmethyl
 group, methylcarbamoylmethyl group, ethylcarbamoylmethyl group,
 dimethylcarbamoylmethyl group, methylethylcarbamoylmethyl group,
 carbamoylethyl group, methylcarbamoyoylethyl group,
 ethylcarbamoyoylethyl group, dimethylcarbamoyoylethyl group,
 methylethylcarbamoyoylethyl group, carbamoylpropyl group, 2-carbamoyl
 cyclopropyl group, ureidomethyl group, N3-methylureidomethyl group,
 N3-ethylureidomethyl group, N3,N3-dimethylureidomethyl group,
 N3-methyl-N3-ethylureidomethyl group, 2-(ureido)ethyl group,
 2-(N3-methylureido)ethyl group, 2-(N3-ethylureido)ethyl group,

[0043]

The carbamoyl group optionally substituted with 1 or 2 substituents means a carbamoyl group optionally substituted with 1 or 2 straight, branched, or cyclic C₁₋₆ alkyl groups, and examples thereof include, in addition to unsubstituted carbamoyl group, methylcarbamoyl group, ethylcarbamoyl group, propylcarbamoyl group, isopropylcarbamoyl group, primary, secondary, or tertiary butylcarbamoyl group, pentylcarbamoyl group, hexylcarbamoyl group,

cyclopropylcarbamoyl group, cyclobutylcarbamoyl group, cyclopentylcarbamoyl group, cyclohexylcarbamoyl group, cyclopropylmethylcarbamoyl group, cyclopentylmethylcarbamoyl group, dimethylcarbamoyl group, methylethylcarbamoyl group, diethylcarbamoyl group, methylpropylcarbamoyl group, methylisopropylcarbamoyl group, methylcyclopropylcarbamoyl group, and methylcyclopropylmethylcarbamoyl group.

[0044]

The oxamoyl group optionally substituted with 1 or 2 substituents means an oxamoyl group optionally substituted with 1 or 2 straight, branched or cyclic C₁₋₆ alkyl groups, and examples thereof include, in addition to unsubstituted oxamoyl group, methyloxamoyl group, ethyloxamoyl group, propyloxamoyl group, isopropyloxamoyl group, primary, secondary, or tertiary butyloxamoyl group, pentyloxamoyl group, hexyloxamoyl group, cyclopropyloxamoyl group, cyclobutyloxamoyl group, cyclopentyloxamoyl group, cyclohexyloxamoyl group, cyclopropylmethyloxamoyl group, cyclopentylmethyloxamoyl group, dimethyloxamoyl group, methylethyloxamoyl group, diethyloxamoyl group, methylpropyloxamoyl group, methylisopropyloxamoyl group, methyl cyclopropyloxamoyl group, and methyl cyclopropylmethyloxamoyl group.

[0045]

The amino group optionally substituted with 1 or 2 substituents means an amino group optionally substituted with 1 or 2 straight, branched or cyclic C₁₋₆ alkyl groups, and examples thereof include, in addition to unsubstituted amino group, methylamino group, ethylamino group, propylamino group, isopropylamino group, primary, secondary,

or tertiary butylamino group, pentylamino group, hexylamino group, cyclopropylamino group, cyclobutylamino group, cyclopentylamino group, cyclohexylamino group, cyclopropylmethylamino group, cyclopentylmethylamino group, dimethylamino group, methylethylamino group, diethylamino group, methylpropylamino group, methylisopropylamino group, methyl cyclopropylamino group, methyl cyclopropylmethylamino group, and methyl tertiarybutoxycarbonylamino group.

[0046]

Examples of the 4- to 7-membered aliphatic heterocyclic group which is optionally substituted with 1 or 2 substituents include azetidiny group, pyrrolidinyl group, piperidinyl group, piperadiny group, hexahydropyridazinyl group, hexahydropyrimidinyl group, pyrazolidinyl group, imidazolidinyl group, homopiperadiny group, morpholinyl group, and thiomorpholinyl group.

These groups may be substituted with a substituent such as hydroxyl group, oxo group, carboxyl group, sulfo group, cyano group, nitro group, or with the halogeno group, the lower alkoxy group, the alkylsulfonyl group, the alkyl group optionally substituted with 1 or 2 substituents, the amino group optionally substituted with 1 or 2 substituents, the carbamoyl group optionally substituted with 1 or 2 substituents, the lower acyl group, or the aminosulfonyl group optionally substituted with 1 or 2 substituents as described above.

[0047]

Examples of the phenyl group optionally substituted with 1 to 3 substituents are the groups as mentioned above for Ar₁ and Ar₂, and examples of the 5- or 6-membered aromatic heterocyclic group optionally

substituted with 1 to 3 substituent are the groups as mentioned above for Ar₁ and Ar₂.

[0048]

Next, compounds (I) of the present invention are described in further detail.

[0049]

Examples of the preferable aromatic heterocyclic group optionally substituted with 1 to 3 substituents represented by Ar₁ and Ar₂ in general formula (I) include pyridyl, pyridazinyl, pyrimidinyl, pyrazinyl, thiadiazolyl, 1H-pyrrolyl group, 1H-imidazolyl group and 1H-pyrazolyl group optionally substituted with 1 to 3 substituents selected from C₁₋₆ alkyl groups, hydroxy C₁₋₆ alkyl groups, halogeno C₁₋₆ alkyl groups, amino C₁₋₆ alkyl groups, mono- or di(C₁₋₆ alkyl)amino C₁₋₆ alkyl groups, C₂₋₇ alkanoylamino C₁₋₆ alkyl groups, C₆₋₁₄ arylcarbonylamino C₁₋₆ alkyl groups, alicyclic heterocyclic carbonylamino C₁₋₆ alkyl groups, C₁₋₆ alkoxy carbonylamino C₁₋₆ alkyl groups, C₆₋₁₄ aryloxy carbonylamino C₁₋₆ alkyl groups, carbamoylamino C₁₋₆ alkyl groups, C₁₋₆ alkyl carbamoylamino C₁₋₆ alkyl groups, alicyclic heterocyclic carbamoylamino C₁₋₆ alkyl groups, hydroxyamino C₁₋₆ alkyl groups, C₁₋₆ alkoxyamino C₁₋₆ alkyl groups, C₁₋₆ alkylsulfonylamino C₁₋₆ alkyl groups, C₆₋₁₄ arylsulfonylamino C₁₋₆ alkyl groups, carbamoyl C₁₋₆ alkyl groups, C₁₋₆ alkyl carbamoyl C₁₋₆ alkyl groups, C₁₋₆ alkoxy carbonyl C₁₋₆ alkyl groups, carboxy C₁₋₆ alkyl groups, alicyclic heterocyclic carbonyl C₁₋₆ alkyl groups, halogeno groups, hydroxy group, cyano group, C₁₋₆ alkoxy groups, carbamoyl C₁₋₆ alkoxy groups, C₁₋₆ alkoxy carbonyl C₁₋₆ alkoxy groups, carboxy C₁₋₆ alkoxy groups, alicyclic heterocyclic carbonyl C₁₋₆ alkoxy groups, C₆₋₁₄ aralkyloxy groups, C₁₋₆ alkylthio groups,

C₁₋₆ alkoxy carbonyl groups, carboxyl group, C₁₋₆ alkylsulfonyl groups, amino group, mono- or di(C₁₋₆ alkyl)amino groups, C₂₋₇ alkanoylamino groups, C₁₋₆ alkoxy carbonylamino groups, C₁₋₆ alkylureido groups, carbamoyl group, C₁₋₆ alkylcarbamoyl groups, aminosulfonyl group, C₁₋₆ alkylaminosulfonyl groups, aliphatic heterocyclic groups, C₂₋₆ alkenyl groups, C₂₋₆ alkynyl groups, and C₂₋₇ alkanoyl groups.

[0050]

More preferable examples of the aromatic heterocyclic group include 2-pyridyl group, 3-pyridyl group, 6-methoxy-3-pyridyl group, 5-methoxy-2-pyridyl group, 4-methyl-2-pyridyl group, 5-methyl-2-pyridyl group, 6-methyl-3-pyridyl group, 6-hydroxy-3-pyridyl group, 6-cyano-3-pyridyl group, 6-carbamoyl-3-pyridyl group, 4-carbamoyl-2-pyridyl group, 5-carbamoyl-2-pyridyl group, 4-hydroxymethyl-2-pyridyl group, 5-hydroxy-2-pyridyl group, 5-cyano-2-pyridyl group, 5-carboxyl-2-pyridyl group, 5-hydroxymethyl-2-pyridyl group, 5-aminomethyl-2-pyridyl group, 5-chloro-2-pyridyl group, 5-amino-2-pyridyl group, 5-dimethylamino-2-pyridyl group, 5-fluoro-2-pyridyl group, 4-methoxy-2-pyridyl group, 5-formyl-2-pyridyl group, 5-acetyl-2-pyridyl group, 5-ethynyl-2-pyridyl group, 5-(1-hydroxyethyl)-2-pyridyl group, 5-(2-methoxycarbonyl vinylene)-2-pyridyl group, 5-(2-methoxycarbonylethyl)-2-pyridyl group, 5-(2-carbamoylethyl)-2-pyridyl group, 5-(methylamino)methyl-2-pyridyl group, 5-(methanesulfonylamino)methyl-2-pyridyl group, 5-(acetylamino)methyl-2-pyridyl group, 5-(methoxycarbonylamino)methyl-2-pyridyl group, 5-(phenoxy-

carbonylamino)methyl-2-pyridyl group, 5-(cyclopentanecarbonylamino)methyl-2-pyridyl group,
 5-([3-(tetrahydro-2H-pyran-4-yl)ureido]methyl)-2-pyridyl group,
 5-(morpholinocarbonylamino)methyl-2-pyridyl group,
 5-(carbamoylmethoxy)-2-pyridyl group, 3-pyridazinyl group,
 6-methoxy-3-pyridazinyl group, 6-methyl-3-pyridazinyl group,
 2-pyrazinyl group, 5-methoxy-2-pyrazinyl group, 5-methyl-2-pyrazinyl group,
 5-amino-2-pyrazinyl group, 2-pyrimidyl group, 4-pyrimidyl group,
 5-methoxy-1,3,4-thiadiazole-2-yl group, 1H-pyrrole-2-yl group,
 1-methyl-1H-pyrrole-2-yl group, 1H-pyrrole-3-yl group,
 1-methyl-1H-pyrrole-3-yl group, 1H-pyrrole-1-yl group,
 1-methyl-1H-imidazole-4-yl group, and 1H-pyrazole-3-yl group.

[0051]

Preferable examples of the phenyl group optionally substituted with 1 to 3 substituents represented by Ar₁ and Ar₂ in general formula (I) include phenyl groups optionally substituted with 1 to 3 substituents selected from C₁₋₆ alkyl groups, hydroxy C₁₋₆ alkyl groups, halogeno C₁₋₆ alkyl groups, amino C₁₋₆ alkyl groups, mono- or di(C₁₋₆ alkyl)amino C₁₋₆ alkyl groups, C₂₋₇ alkanoylamino C₁₋₆ alkyl groups, C₆₋₁₄ arylcarbonylamino C₁₋₆ alkyl groups, alicyclic heterocyclic carbonylamino C₁₋₆ alkyl groups, C₁₋₆ alkoxy carbonylamino C₁₋₆ alkyl groups, C₆₋₁₄ aryloxy carbonylamino C₁₋₆ alkyl groups, carbamoylamino C₁₋₆ alkyl groups, C₁₋₆ alkyl carbamoylamino C₁₋₆ alkyl groups, alicyclic heterocyclic carbamoylamino C₁₋₆ alkyl groups, hydroxyamino C₁₋₆ alkyl groups, C₁₋₆ alkoxyamino C₁₋₆ alkyl groups, C₁₋₆ alkylsulfonylamino C₁₋₆ alkyl groups, C₆₋₁₄ arylsulfonylamino C₁₋₆ alkyl groups, carbamoyl C₁₋₆ alkyl groups, C₁₋₆ alkyl carbamoyl C₁₋₆ alkyl groups, C₁₋₆ alkoxy carbonyl

C₁₋₆ alkyl groups, carboxy C₁₋₆ alkyl groups, alicyclic heterocyclic carbonyl C₁₋₆ alkyl groups, halogeno groups, hydroxy group, cyano group, C₁₋₆ alkoxy groups, carbamoyl C₁₋₆ alkoxy groups, C₁₋₆ alkoxycarbonyl C₁₋₆ alkoxy groups, carboxy C₁₋₆ alkoxy groups, alicyclic heterocyclic carbonyl C₁₋₆ alkoxy groups, C₆₋₁₄ aralkyloxy groups, C₁₋₆ alkylthio groups, C₁₋₆ alkoxycarbonyl groups, carboxyl group, C₁₋₆ alkylsulfonyl groups, amino group, mono- or di(C₁₋₆ alkyl)amino groups, C₂₋₇ alkanoylamino groups, C₁₋₆ alkoxycarbonylamino groups, C₁₋₆ alkylureido groups, carbamoyl group, C₁₋₆ alkylcarbamoyl groups, aminosulfonyl group, C₁₋₆ alkylaminosulfonyl groups, aliphatic heterocyclic groups, C₂₋₆ alkenyl groups, C₂₋₆ alkynyl groups, and C₂₋₇ alkanoyl groups. More preferable examples of the phenyl group include phenyl group, 4-methylphenyl group, 4-ethylphenyl group, 4-N,N-dimethylaminophenyl group, 3-N,N-dimethylaminophenyl group, 4-cyanophenyl group, and 4-carbamoylphenyl group.

[0052]

The groups represented by R₁ in general formula (I) include C₁₋₆ alkyl groups, C₁₋₆ alkoxy-C₁₋₆ alkyl groups, carbamoyl-C₁₋₆ alkyl groups, hydroxy-C₁₋₆ alkyl groups, halogeno-C₃₋₆ cycloalkyl groups, carboxy-C₁₋₆ alkyl groups, amino-C₃₋₆ cycloalkyl groups, N-C₁₋₆ alkylamino-C₃₋₆ cycloalkyl groups, N,N-di(C₁₋₆ alkyl)amino-C₃₋₆ cycloalkyl groups, N,N-di(C₁₋₆ alkyl)amino-C₁₋₆ alkyl-C₃₋₆ cycloalkyl groups, hydroxy C₁₋₆ alkyl-C₃₋₆ cycloalkyl groups, propargyl-C₃₋₆ cycloalkyl groups, carbamoyl-C₃₋₆ cycloalkyl groups, ε-amino caprolactam group, C₃₋₆ cycloalkyl-C₁₋₆ alkyl groups, azetidiny group, N-C₁₋₆ alkyl azetidiny groups, pyrrolidiny group, N-C₁₋₆ alkylpyrrolidiny groups, pyrrolidiny-C₁₋₆ alkyl groups, N-C₁₋₆ alkyl-pyrrolidiny-C₁₋₆ alkyl

groups, tetrahydrofuranyl group, tetrahydropyranyl group, tetrahydrofuran-C₁₋₆ alkyl groups, phenyl group, C₁₋₆ alkoxy-phenyl groups, halogenophenyl groups, cyanophenyl group, phenyl C₁₋₆ alkyl groups, pyridyl group, and pyridyl-C₁₋₆ alkyl group.

[0053]

Examples of more preferable groups for R₁ include methyl group, ethyl group, n-propyl group, isopropyl group, isobutyl group, t-butyl group, (2-hydroxy-1,1-dimethyl)ethyl group, aminocyclopropyl group, N,N-dimethylaminocyclopropyl group, N-methylazetidiny group, pyrrolidiny group, N-methylpyrrolidiny group, N,N-dimethylamino-t-butyl group, 1-(N,N-dimethylaminomethyl)-1-cyclopentyl group, 1-methyl-1-(N-methylpyrrolidiny) group, pyrrolidinyethyl group, methoxy-t-butyl group, tetrahydrofuryl group, tetrahydropyranyl group, 1-hydroxymethyl-1-cyclopentyl group, 1-hydroxymethyl-1-cyclohexyl group, tetrahydrofurylmethyl group, fluorocyclopropyl group, 1-carbamoyl-1-methylethyl group, 1-carbamoyl-1-cyclopentyl group, 2-carbamoyl-1-cyclopentyl group, 2-carbamoyl-1-cyclohexyl group, 1-carbamoyl-2,2-dimethylpropyl group, ε-caprolactam-2-yl group, cyclopropyl group, cyclobutyl group, cyclohexyl group, bicycloheptyl group, cyclohexylmethyl group, neopentyl group, 1-propargyl-1-cyclohexyl group, phenyl group, pyridyl group, methoxypyridyl group, fluoropyridyl group, methoxyphenyl group, fluorophenyl group, benzyl group, 1-cyanobenzyl group, 1,1-dimethylbenzyl group, pyridylmethyl group, methoxy group, cyanomethyl group, piperidino group, (2-fluoro-1,1-dimethyl)ethyl group, and (2-fluoro-1-fluoromethyl-1-methyl)ethyl group.

[0054]

The groups represented by R₂ include a hydrogen atom, a C₁₋₆ alkyl group, a carboxy C₁₋₆ alkyl group, a C₁₋₆ alkoxy carbonyl-C₁₋₆ alkyl group, and a carbamoyl C₁₋₆ alkyl group. More preferable examples of R₂ include a hydrogen atom, carbamoylmethyl group, carboxymethyl group, methyl group, ethyl group, n-propyl group, isopropyl group, and isobutyl group.

[0055]

With regard to the salt of the compound (I) of the present invention, not all the compounds of the present invention form a salt. However, when the compound (I) has carboxyl group, amino group, or the like, and/or when Ar₁ or Ar₂ is pyridine ring or the like, the compound can form a salt, and in some case, the salt may also form a solvate. The term "salt" as used herein may be exemplified by a salt with an inorganic acid such as hydrochloric acid, hydrobromic acid, sulfuric acid, or nitric acid, a salt with an organic acid such as methanesulfonic acid, p-toluenesulfonic acid, fumaric acid, or trifluoroacetic acid, and a salt with an alkaline metal or an alkaline earth metal ion such as sodium, potassium, or calcium ion.

[0056]

The solvate of the present compound (I) and the solvate of a salt of the present compound (I) include those formed by addition of the solvent used in the precipitation of the crystal, and also, those formed by absorbing moisture in the air. Examples of the solvent include lower alcohols such as methanol and ethanol, other organic solvents such as acetone and acetonitrile, and water.

[0057]

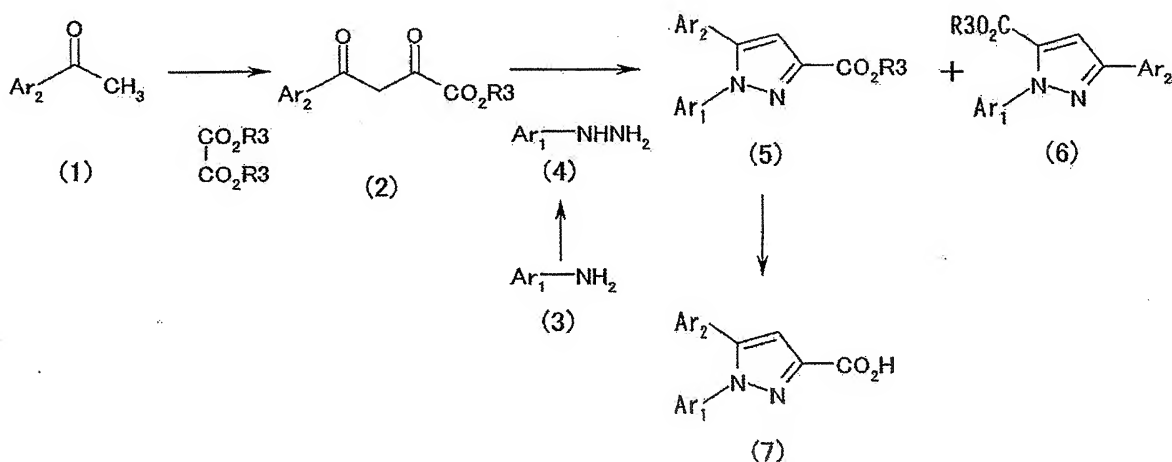

Typical process for producing the compounds (I) of the present invention is described below.

[0058]

In producing a compound (I) of the present invention, a pyrazolecarboxylic acid (7) produced by the procedure as described below may be used as an intermediate.

[0059]

[Chem 3]

[0060]

(In the reaction scheme, Ar_1 and Ar_2 are as defined above, and R_3 represents methyl group or ethyl group).

[0061]

A compound (2) may be produced by dissolving or suspending a compound (1) and a dialkyl oxalate in an adequate solvent such as N,N-dimethylformamide, adding sodium hydride under argon stream at a temperature of -20 to 20°C , and stirring the mixture.

[0062]

A compound (2) may also be produced by treating a compound (1) and a dialkyl oxalate in the presence of a sodium alkoxide (methoxide or ethoxide) in an alcohol (methanol or ethanol) solution. The reaction temperature is preferably in the range of from -10 to 100°C.

[0063]

A compound (2) can also be produced by dissolving a compound (1) in an inert solvent such as tetrahydrofuran, cooling the solution to -78°C, treating the solution with a base such as lithium bis(trimethylsilyl)amide, adding a dialkyl oxalate, and stirring the solution. The reaction temperature is preferably in the range of from -78 to 20°C.

[0064]

The compound (1) used may be either a commercially available product, or the one produced by the method described in the Referential Example or a similar method.

[0065]

A compound (5) can be produced by dissolving a compound (2) in an alcohol (methanol or ethanol), adding a hydrazine derivative (4) or its salt at room temperature, adding an adequate amount of acetic acid, and heating the mixture under reflux. The byproduct, position isomer (6), produced in the course of this step may be readily separated and removed from the compound (5) by column chromatography on silica gel.

[0066]

Alternatively, the reaction for producing the pyrazole ring may be accomplished by adding an adequate amount of triethylamine or conc. hydrochloric acid instead of adding acetic acid and heating the mixture

under reflux, and in some cases, compound (5) can be produced even without adding acetic acid, triethylamine, or conc. hydrochloric acid.

[0067]

In the reaction for producing the pyrazole ring, a 4,5-dihydro-5-hydroxy-1H-pyrazole derivative is sometimes produced as an intermediate together with a compound (5). In this case, the compound (5) may be efficiently recovered by dissolving the resulting mixture in a solvent such as methylene chloride or N,N-dimethylformamide, adding methanesulfonyl chloride, triethylamine, and 4-dimethylaminopyridine, and stirring the mixture.

[0068]

A pyrazolecarboxylic acid (7) may be produced by hydrolyzing a compound (5) by a method commonly used in the art.

[0069]

The hydrolysis may be conducted in the presence of a base or a Lewis acid. The base used may be a hydroxide of an alkaline metal (such as lithium, sodium, or potassium), and the reaction temperature in such a case is preferably in the range of from room temperature to 100°C. The Lewis acid use may be boron tribromide, and the reaction temperature in such a case is preferably in the range of from -20 to 100°C, and more preferably in the range of from -5 to 50°C.

[0070]

A compound (5) produced by the procedure as described above may be changed to another compound (5), for example, by modifying a substituent on Ar₁ using the knowledge common in the art of organic chemistry. In an embodiment, a compound (5) wherein the substituent on Ar₁ is a halogeno group such as chloro or bromo group may be dissolved

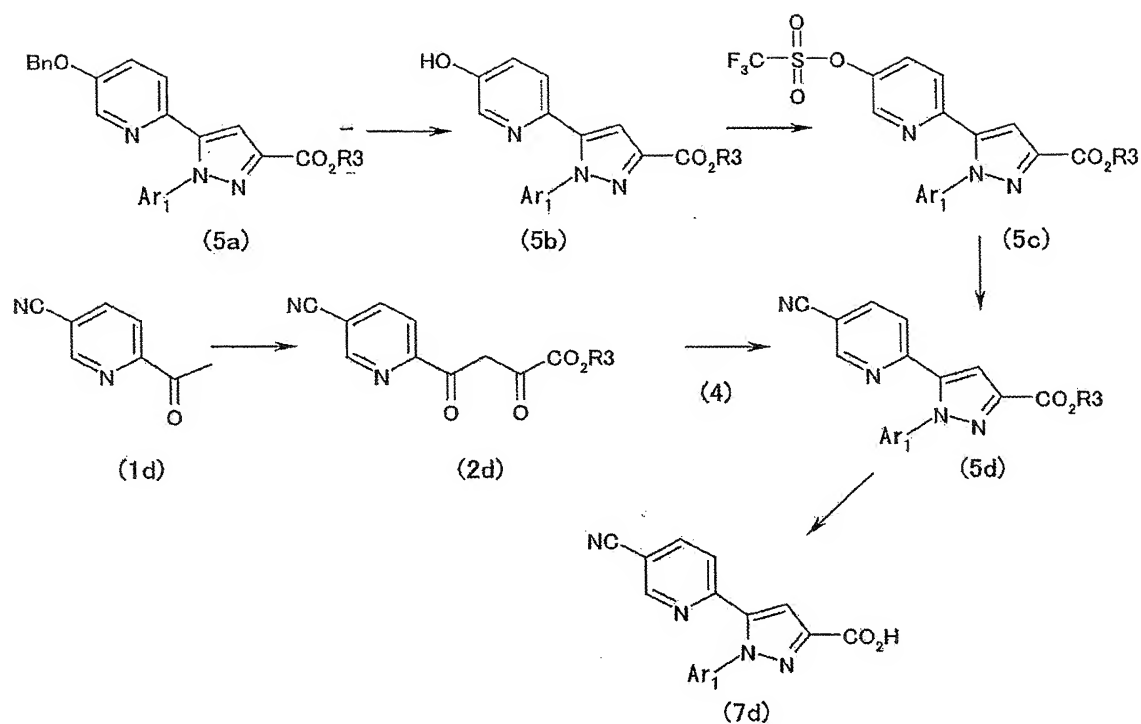

in methanol, and after adding sodium methoxide, the solution is heated under reflux to produce a compound (5) wherein the substituent on Ar₁ is methoxy group. In another embodiment, a compound (5) wherein the substituent on Ar₁ is a halogeno group such as chloro or bromo group may be dissolved in a mixed solvent of methanol and toluene, and after adding sodium methoxide and a catalyst such as copper (I) bromide, the solution is heated under reflux to produce a compound wherein the substituent on Ar₁ is methoxy group.

[0071]

The intermediate (5) of the compound (I) of the present invention produced by the procedure as described above may be further modified using the knowledge common in the art of organic chemistry to produce another compound (5). For example, a hydroxy derivative (5b), a trifluoromethanesulfonyloxy derivative (5c), a cyano derivative (5d), and the like may be produced from a benzyloxy derivative (5a).

[0072]

[Chem 4]

[0073]

(In the reaction scheme, Ar₁ is as defined above, Bn represents benzyl group, and R₃ represents methyl group or ethyl group).

[0074]

More specifically, hydroxy derivative (5b) may be produced by dissolving benzyloxy derivative (5a) in a solvent such as ethanol, and catalytically reducing the benzyloxy derivative (5a) by using 10% palladium on carbon as a catalyst.

[0075]

Trifluoromethanesulfonyloxy derivative (5c) may be produced by dissolving hydroxy derivative (5b) in a solvent such as methylene chloride for reaction with trifluoromethanesulfonyl anhydride in the

presence of a base such as pyridine at a temperature of from -50 to 50°C.

[0076]

A cyano derivative (5d) may be produced by dissolving a trifluoromethanesulfonyloxy derivative (5c) in a solvent such as dichloroethane, adding tri-n-butyltin cyanide and tetrakis (triphenylphosphine)palladium (0), and stirring the mixture. The reaction temperature is preferably in the range of from 10 to 100°C. The reaction conditions and the reagents used may be adequately selected based on the knowledge common in the art of organic chemistry.

[0077]

Alternatively, a cyano derivative (5d) may be produced by dissolving an acetylpyridine derivative (1d) in an inert solvent such as tetrahydrofuran, cooling the solution to -78°C, treating the solution with lithium bis(trimethylsilyl)amide, then adding a dialkyl oxalate, stirring the mixture to produce a compound (2d), dissolving the thus produced compound (2d) in 1N hydrochloric acid solution in ethanol, adding thereto a hydrazine derivative (4) at room temperature, and heating the mixture under reflux.

[0078]

The acetylpyridine derivative (1d) used may be produced by the method described in the Referential Example or a similar method.

[0079]

A pyrazolecarboxylic acid (7d) may be produced by dissolving a cyano derivative (5d) in tetrahydrofuran and water, adding thereto an equivalent amount of lithium hydroxide monohydrate, and stirring

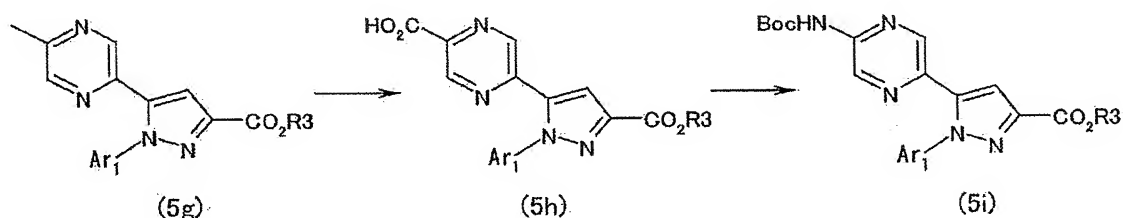

the mixture. The reaction temperature is preferably in the range of from 0 to 50°C.

[0080]

A carboxylic acid derivative (5h), an amino derivative (5i), and the like may be produced from a methylpyrazine derivative (5g) as shown below.

[0081]

[Chem 5]

[0082]

(In the reaction scheme, Ar₁ and R₃ are as defined above, and Boc represents tert-butoxycarbonyl group.)

[0083]

More specifically, a carboxylic acid derivative (5h) may be produced by dissolving a methylpyrazine derivative (5g) in a solvent such as pyridine, adding thereto selenium dioxide at room temperature, and heating the mixture under reflux.

[0084]

An amino derivative (5i) may be produced by dissolving a carboxylic acid derivative (5h) in a solvent such as 1,4-dioxane, adding thereto tert-butanol, triethylamine, and diphenylphosphoryl azide at room temperature, and heating the mixture under reflux. The reaction

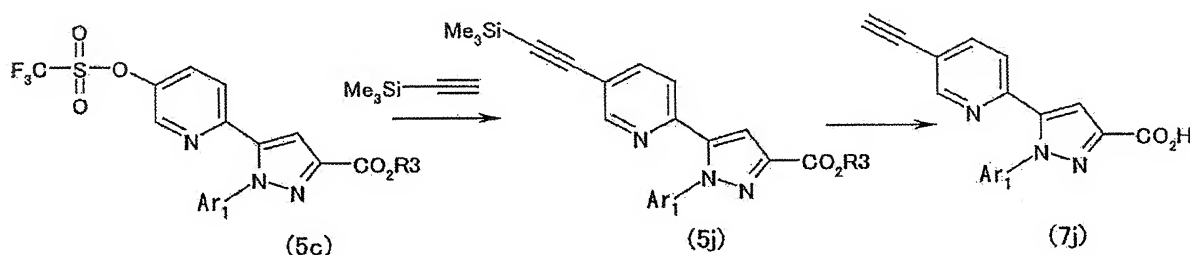

conditions and the reagents used may be adequately selected based on the knowledge common in the art of organic chemistry

[0085]

Furthermore, an ethynyl derivative (5j) or the like may be produced from a trifluoromethanesulfonyloxy derivative (5c) as shown below.

[0086]

[Chem 6]

[0087]

(In the reaction scheme, Ar₁ and R₃ are as defined above.)

[0088]

More specifically, an ethynyl derivative (5j) may be produced by dissolving a trifluoromethanesulfonyloxy derivative (5c) in N,N-dimethylformamide and triethylamine, adding thereto trimethylsilyl acetylene and bis(triphenylphosphine)palladium (II) dichloride, and stirring the mixture. The reaction temperature is preferably in the range of from 10 to 100°C. The reaction conditions and the reagents used may be adequately selected based on the knowledge common in the art of organic chemistry.

[0089]

A pyrazolecarboxylic acid derivative (7j) may be produced by dissolving an ethynyl derivative (5j) in ethanol and tetrahydrofuran,

and hydrolyzing the ethynyl derivative (5j) with sodium hydroxide. The reaction temperature is preferably in the range of from 0 to 100°C.

[0090]

The hydrazine derivative (4) or its salt used in the reaction for forming the pyrazole ring may be either a commercially available product, or the one produced using the technique described in the Referential Example by reacting a halogenated Ar_1 with hydrazine, or a similar method. More specifically, a hydrazine derivative (4) or its salt may be produced by dissolving an amine (3) in conc. hydrochloric acid, adding thereto sodium nitrite in an ice bath to produce a diazo derivative, and treating the diazo derivative with tin (II) chloride. The reaction temperature is preferably in the range of from -10 to 20°C.

[0091]

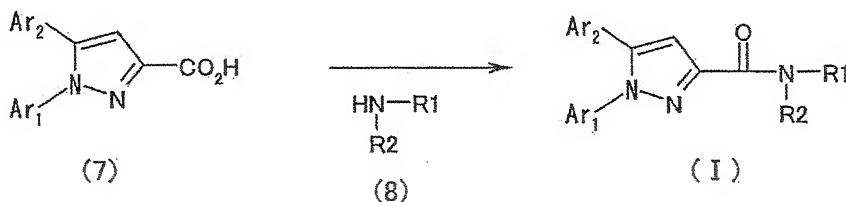

The amine (3) used may be either a commercially available compound or the one produced by the method described in the Referential Example or a similar method.

[0092]

A compound (I) of the present invention may be produced by condensing the pyrazolecarboxylic acid derivative (7) produced by the procedure as described above with an amine (8).

[0093]

[Chem 7]

[0094]

(In the reaction scheme, R1, R2, Ar₁, and Ar₂ are as defined above.)

[0095]

The condensation as described above may be accomplished by any of the methods generally used for peptide synthesis. The method commonly used for peptide synthesis include azide method, acid chloride method, acid anhydride method, DCC (dicyclohexylcarbodiimide) method, active ester method, carbodiimidazole method, DCC/HOBT (1-hydroxybenzotriazole) method, a method using water-soluble carbodiimide, and a method using diethyl cyanophosphate, and these methods are described, for example, in M. Bodanszky, Y.S. Klausner, and M.A. Ondetti, "Peptide Synthesis", A Wiley-interscience publication, New York, 1976; Gv. Pettit, "Synthetic Peptides", Elsevier Scientific Publication Company, New York, 1976; and Japanese Society of Chemistry ed. "Lectures on Experimental Chemistry 4th ed., vol. 22, Organic Synthesis IV", Maruzen Publishing, 1992. The solvents which may be used in such condensation include N,N-dimethylformamide, pyridine, chloroform, methylene chloride, tetrahydrofuran, 1,4-dioxane, acetonitrile, and a mixture thereof. The reaction temperature is preferably in the range of from -20 to 50°C, and more preferably from -10 to 30°C. The amine (8) used may be either a commercially available product or the one produced by the method described in the Referential Example or a similar method.

[0096]

When the amine (8) used in the condensation as described above has a functional group such as hydroxyl group, amino group, or carboxyl

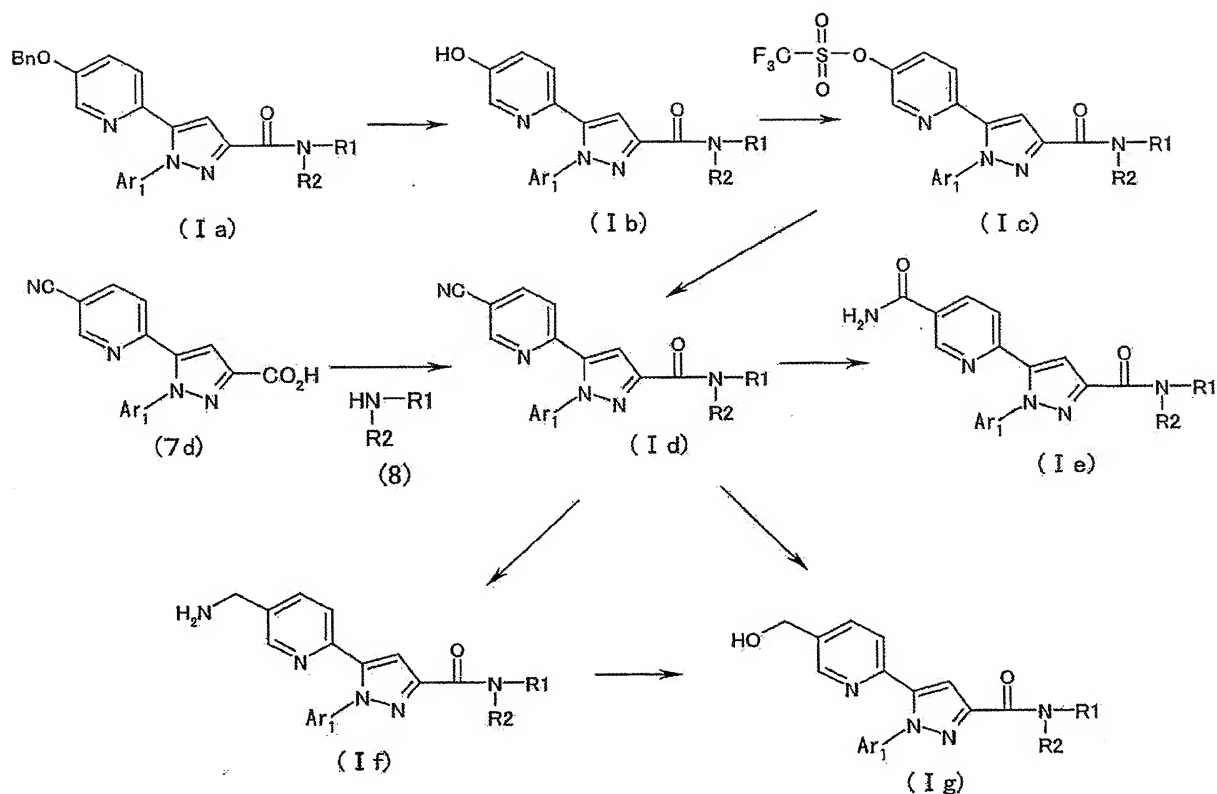

group, such functional group may require preliminary protection by using an adequate protective group. Typical protective groups which may be used for hydroxyl group include tert-butyl group and benzyl group, and typical protective group for amino group include trifluoroacetyl group, tert-butoxycarbonyl group, and benzyloxycarbonyl group. When the functional group is carboxyl group, the amine may be used in the condensation after deriving the carboxyl group into methyl ester or tert-butyl ester. These protective groups may be cleaved off under conditions appropriate for each protective group.

[0097]

The compound (I) of the present invention produced by the procedure as described above may be further modified by using the knowledge common in the art of organic chemistry to produce another compound (I) of the present invention. For example, a hydroxy derivative (Ib), a trifluoromethanesulfonyloxy derivative (Ic), a cyano derivative (Id), a carbamoyl derivative (Ie), an aminomethyl derivative (If), and a hydroxymethyl derivative (Ig) may be produced from a compound (Ia).

[0098]

[Chem 8]

[0099]

(In the reaction scheme, Ar₁, R₁, and R₂ are as defined above, Bn represents benzyl group, and Boc represents tert-butoxycarbonyl group.)

[0100]

More specifically, a hydroxy derivative (Ib) may be produced by dissolving a benzyloxy derivative (Ia) in a solvent such as ethanol, and catalytically reducing the benzyloxy derivative (Ia) by using 10% palladium on carbon as a catalyst.

[0101]

A compound (Ic) may be produced by dissolving a hydroxy derivative (Ib) in a solvent such as methylene chloride, and reacting it with

trifluoromethanesulfonic anhydride in the presence of a base such as pyridine at a temperature in the range of from -50 to 50°C.

[0102]

A cyano derivative (Id) may be produced by dissolving a compound (Ic) in a solvent such as dichloroethane, and reacting it with tri-n-butyltin cyanide and tetrakis(triphenylphosphine)palladium (0). The reaction temperature is preferably in the range of from 10 to 100°C. The reaction conditions and the reagents used may be adequately selected based on the knowledge common in the art of organic chemistry.

[0103]

Alternatively, a cyano derivative (Id) may be produced by condensing a cyano carboxylic acid derivative (7d) with an amine (8) by using a method commonly used in the art of peptide synthesis.

[0104]

A carbamoyl derivative (Ie) may be produced by dissolving a cyano derivative (Id) in adequate solvents such as methanol and tetrahydrofuran, and hydrolyzing the cyano derivative (Id) with sodium hydroxide. The reaction temperature is preferably in the range of from 0 to 100°C.

[0105]

Alternatively, a carbamoyl derivative (Ie) may be produced by converting a cyano derivative (Id) to a carboxylic acid derivative, and then reacting it with aqueous ammonia or ammonium chloride using an adequate condensing agent.

[0106]

An aminomethyl derivative (If) may be produced by dissolving a cyano derivative (Id) in 2.0M ammonia solution in ethanol, and

catalytically reducing the cyano derivative (Id) using a nickel-silica alumina as a catalyst (at 8 atm).

[0107]

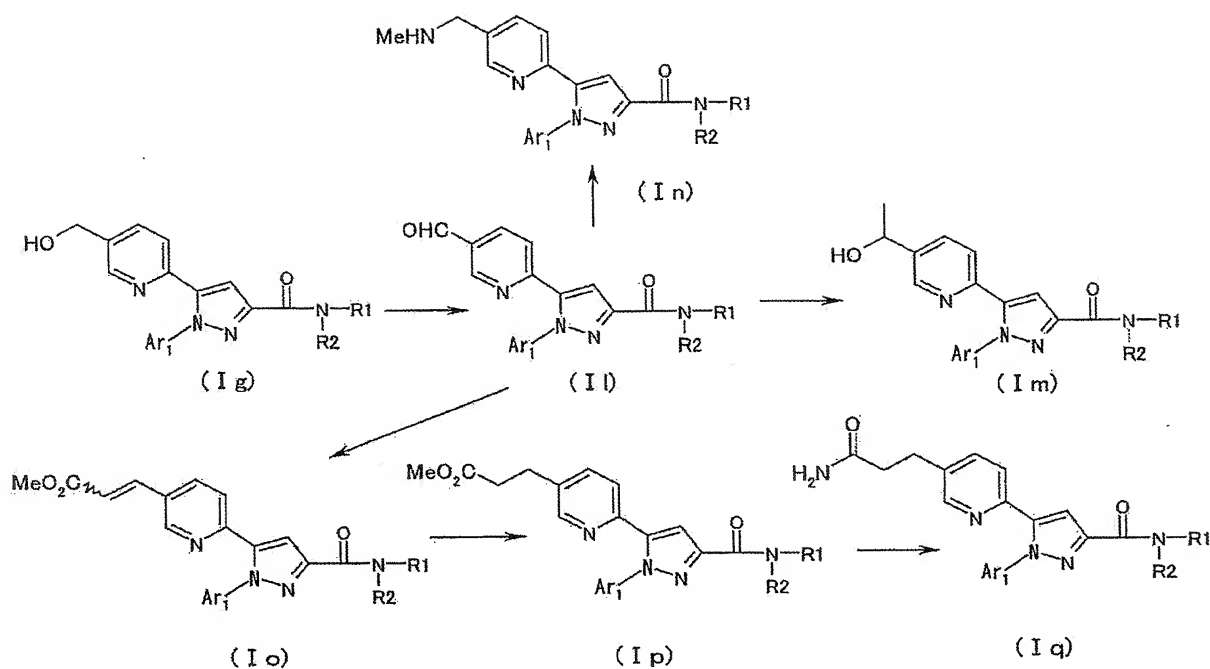

A hydroxymethyl derivative (Ig) may be produced by dissolving a cyano derivative (Id) in an inert solvent such as tetrahydrofuran, adding thereto diisobutylaluminum hydride, stirring the resulting mixture, treating the mixture under an acidic condition for conversion into an aldehyde derivative, and further reducing the aldehyde derivative with sodium borohydride. The reaction temperature is preferably in the range of from -10 to 50°C.

[0108]

A compound (I) of the present invention produced by the procedure as described above may also be further modified by using the knowledge common in the art of organic chemistry to produce another compound (I) of the present invention. For example, derivatives such as aldehyde, 1-hydroxy-1-ethyl, methylaminomethyl, acrylate, propionate, and propionamide derivatives (Il to Iq) may be produced from a compound (Ig).

[0109]

[Chem 9]

[0110]

(In the reaction scheme, Ar₁, R₁, and R₂ are as defined above.)

[0111]

More specifically, an aldehyde derivative (Il) may be produced by dissolving a hydroxymethyl derivative (Ig) in a solvent such as methylene chloride, adding Dess-Martin reagent (1,1,1-tris(acetoxy)-1,1-dihydro-1,2-benziodoxol-3-(1H)-one), and stirring the mixture. The reaction temperature is preferably in the range of from 0 to 50°C. The reaction conditions and the reagents used may be adequately selected based on the knowledge common in the art of organic chemistry.

[0112]

A 1-hydroxy-1-ethyl derivative (Im) may be produced by dissolving an aldehyde derivative (Il) in an inert solvent such as tetrahydrofuran,

cooling the solution to -78°C , and treating the solution with methyl magnesium bromide.

[0113]

An aminomethyl derivative (In) may be produced by dissolving an aldehyde derivative (Il), acetic acid, and methylamine in a solvent such as methanol, adding thereto cyano sodium borohydride, and stirring the mixture. The reaction temperature is preferably in the range of from 0 to 50°C .

[0114]

An acrylate derivative (Io) may be produced by adding an aldehyde derivative (Il) to a reaction liquid prepared by dissolving trimethyl phosphonoacetate in an inert solvent such as tetrahydrofuran, adding thereto sodium hydride, and stirring the mixture. The reaction temperature is preferably in the range of from 0 to 50°C .

[0115]

A propionate derivative (Ip) may be produced by dissolving an acrylate derivative (Io) in a solvent such as methanol, and catalytically reducing the acrylate derivative (Io) by using 10% palladium on carbon as a catalyst.

[0116]

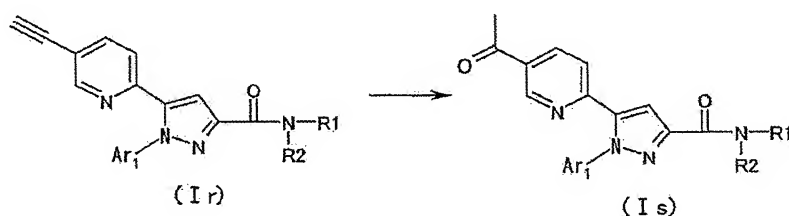

A propionamide derivative (Iq) may be produced by dissolving a propionate derivative (Ip) in tetrahydrofuran and water, adding thereto an equivalent amount of lithium hydroxide monohydrate, stirring the mixture for conversion into a propionic acid derivative, dissolving the resulting propionic acid derivative in a solvent such as N,N-dimethylformamide, adding thereto ammonium chloride or aqueous ammonia and an adequate condensing agent, and stirring the mixture.

[0117]

The compound (I) of the present invention produced by the procedure as described above may also be further modified by using the knowledge common in the art of organic chemistry to produce another compound (I) of the present invention. For example, an acetyl derivative (Is) may be produced from a compound (Ir).

[0118]

[Chem 10]

[0119]

(In the reaction scheme, Ar₁, R₁, and R₂ are as defined above.)

[0120]

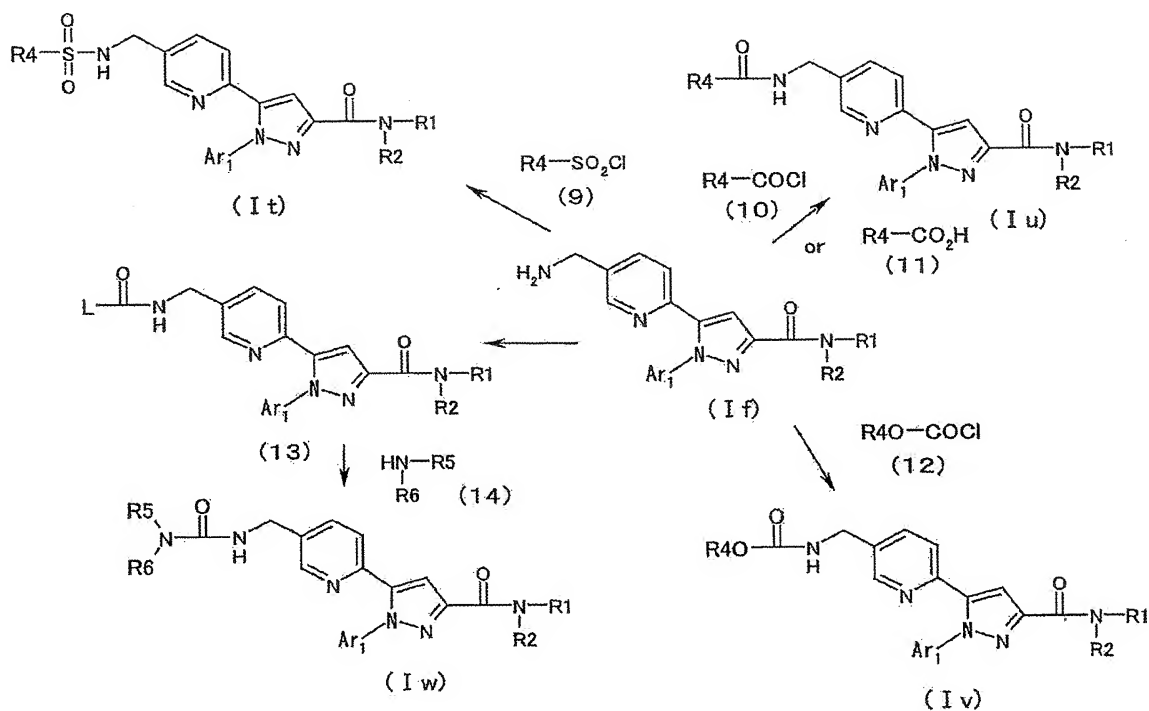

More specifically, an acetyl derivative (Is) may be produced by dissolving an acetylene derivative (Ir) in acetone and water (3:1 v/v), adding thereto mercuric sulfate and sulfuric acid at room temperature, and heating the mixture under reflux.

[0121]

The compound (I) of the present invention produced by the procedure as described above may also be further modified by using the knowledge common in the art of organic chemistry to produce another compound (I) of the present invention. For example, derivatives such as sulfoneamide, amide, urethane, urea derivatives may be produced from a compound (If).

[0122]

[Chem 11]

[0123]

(In the reaction scheme, Ar_1 , R_1 , and R_2 are as defined above; R_4 represents a lower alkyl group or an aryl group; R_5 and R_6 may independently represent hydrogen, a lower alkyl group, or an alicyclic heterocyclic group, or R_5 , R_6 , and N may together represent a 4- to 7-membered alicyclic heterocyclic group; and L represents a leaving group.)

[0124]

More specifically, a sulfoneamide derivative (It) may be produced by dissolving an aminomethyl derivative (If) in a solvent such as methylene chloride, adding thereto sulfonyl chloride derivative (9)

in the presence of an organic base such as triethylamine, and stirring the mixture. The reaction temperature is preferably in the range of from -10 to 50°C.

[0125]

An amide derivative (Iu) may be produced by condensing an aminomethyl derivative (If) with an acid chloride (10) or a carboxylic acid (11) by using a method commonly used for peptide synthesis. For example, an amide derivative (Iu) may be produced by dissolving an aminomethyl derivative (If) in a solvent such as methylene chloride, adding thereto an acid chloride (10) in the presence of an organic base such as triethylamine, and stirring the mixture. The reaction temperature is preferably in the range of from -10 to 50°C.

[0126]

An urethane derivative (Iv) may be produced by dissolving an aminomethyl derivative (If) in a solvent such as methylene chloride, and treating the solution with a chloroformate (12) in the presence of an organic base such as triethylamine. The reaction temperature is preferably in the range of from -10 to 50°C.

[0127]

An urea derivative (Iw) may be produced by dissolving an aminomethyl derivative (If) in a solvent such as methylene chloride, adding thereto 4-nitrophenyl chloroformate in the presence of an organic base such as triethylamine, stirring the mixture to produce a compound (13) wherein the leaving group L is 4-nitrophenyloxy group, and reacting the compound (13) with an amine (14). The reaction temperature is preferably in the range of from -10 to 50°C.

[0128]

Alternatively, an urea derivative (Iw) may be produced by treating an aminomethyl derivative (If) with an alkyl isocyanate in a solvent such as methylene chloride.

The sulfonyl chloride derivative (9), acid chloride (10), carboxylic acid (11), chloroformate (12), and amine (14) used in the procedure as described above may be either commercially available products or those produced by the methods described in the Referential Examples or similar methods.

[0129]

The compounds (I) of the present invention, the salts or the solvates thereof, or the solvates of the salts have a potent anti-platelet coagulation activity, and they exhibit effectiveness in a high shear stress-induced thrombosis model. Therefore, the compounds (I) of the present invention, the salts or the solvates thereof, or the solvates of the salts are useful in human and other mammals as a prophylactic and/or therapeutic agent for ischemic diseases caused by thrombus or embolus such as myocardial infarction, angina pectoris (chronic stable angina, unstable angina, etc.), ischemic cerebrovascular disorder (transient ischemic attack (TIA), cerebral infarction, etc.), peripheral vascular disease, embolism after replacement with an artificial vessel, thrombotic embolism after coronary artery intervention (coronary artery bypass grafting (CAGB), percutaneous transluminal coronary angioplasty (PTCA), stent placement, etc.), diabetic retinopathy and nephropathy, and embolism after replacement with an artificial heart valve, and also, as a prophylactic and/or therapeutic agent for thrombus and embolus associated with vascular operation, blood extracorporeal circulation, and the like.

[0130]

When a compound (I) of the present invention, its salt or solvate, or the solvate of its salt is used as a drug, it may be administered preferably at a dose of 0.1 mg to 1 g per day per adult, and more preferably at 0.5 mg to 500 mg per day per adult either as a single dose or several divided doses, although the dose may vary depending on the age, sex, symptoms of the patient and the like. If necessary, the compound/salt/solvate may also be administered at a dose exceeding such daily dose.

A drug containing a compound (I) of the present invention, its salt or solvate, or a solvate of such salt is not limited with regard to its administration route or dosage form, and it may be administered via any route and in any dosage form as desired. More specifically, it may be prepared by any preparation method commonly used in the pharmaceutical preparation by incorporating a pharmaceutically acceptable vehicle as desired, and it may be prepared in any dosage form suitable for the selected administration route.

Oral preparations include solid preparations such as tablet, powder, granules, pill, and capsule, as well as liquid preparations such as solution, syrup, elixir, suspension, and emulsion.

An injection may be prepared by filling a container with a solution of a compound (I), its salt or solvate, or a solvate of such salt. Alternatively, a solid prepared, for example, by freeze drying the solution is also usable as a preparation which is rehydrated before its use.

In the production of such preparation, pharmaceutically acceptable additives such as a binder, a disintegrant, a dissolution

promoter, a lubricant, a filler, and an excipient may be selected as desired for incorporation in the preparation.

[EXAMPLES]

[0131]

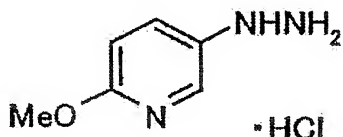

Next, production of typical compounds the present invention is described. Also demonstrated by conducting tests is that the compounds produced exhibits strong platelet coagulation inhibitory action without inhibiting COX-1 or COX-2.

[0132]

[Referential Example 1] 5-hydrazino-2-methoxypyridine hydrochloride

[0133]

[Chem 12]

[0134]

A solution of sodium nitrite (3.795 g) in water (20 ml) was added dropwise to a solution of 5-amino-2-methoxypyridine (6.21 g) in conc. hydrochloric acid (50 ml) over 60 minutes under ice cooling, and the mixture was stirred at the same temperature for 30 minutes. A solution of tin (II) chloride dihydrate (39.5 g) in conc. hydrochloric acid (30 ml) was added dropwise to the reaction liquid at an inner temperature of about 10°C over 30 minutes, and the mixture was stirred at room temperature for 2 hours. To the reaction liquid were added a solution

of sodium hydroxide (75 g) in water (300 ml) and diethylether under ice cooling, and the phases were separated. The aqueous layer was extracted twice with diethylether, and after saturating the aqueous layer with sodium chloride, the aqueous layer was again extracted with diethylether. The organic layers were combined, and dried over anhydrous sodium sulfate. After filtration, 1M solution of hydrochloric acid in ethanol (50 ml) was added to the filtrate, and the mixture was stirred. The resulting solid precipitate was collected by filtration, washed with diethylether, and dried to give the title compound (5.02 g, 57%).

[0135]

$^1\text{H-NMR}$ (400 MHz, DMSO-d_6) δ : 3.81 (3H, s), 6.82 (1H, d, $J = 8.8$ Hz), 7.57 (1H, dd, $J = 8.8, 2.9$ Hz), 7.97 (1H, d, $J = 2.9$ Hz), 8.55-9.20 (1H, br), 10.13-10.50 (3H, br).

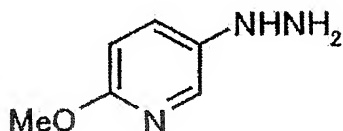

MS (ESI) m/z : 140 ($\text{M}+\text{H}$) $^+$.

[0136]

[Referential Example 2] 5-hydrazino-2-methoxypyridine

[0137]

[Chem 13]

[0138]

A solution of sodium nitrite (3.795 g) in water (20 ml) was added to a solution of 5-amino-2-methoxypyridine (6.207 g) in conc.

hydrochloric acid (50 ml) over 80 minutes under ice cooling, and the mixture was stirred at the same temperature for 30 minutes. A solution of tin (II) chloride dihydrate (39.5 g) in conc. hydrochloric acid (30 ml) was added dropwise to the reaction liquid at an inner temperature of about 10°C over 60 minutes, and the mixture was stirred at room temperature for 12.5 hours. To the reaction liquid were added a solution of sodium hydroxide (54 g) in water (200 ml) and chloroform under ice cooling. After removing the insoluble content by filtration, the aqueous layer was separated, then extracted twice with chloroform. The organic layers were combined and dried over anhydrous sodium sulfate. After filtration, the solvent was evaporated under reduced pressure to give the title compound (4.23 g, 60%) as a solid.

[0139]

$^1\text{H-NMR}$ (400 MHz, CDCl_3) δ : 3.50-3.68 (2H, br), 3.88 (3H, s), 4.86-5.03 (1H, br), 6.66 (1H, d, $J = 8.8$ Hz), 7.20 (1H, dd, $J = 8.8, 2.9$ Hz), 7.77 (1H, d, $J = 2.9$ Hz).

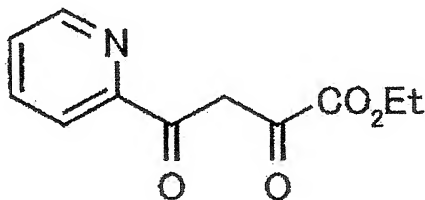

MS (ESI) m/z : 140 ($\text{M}+\text{H}$) $^+$.

[0140]

[Referential Example 3] Ethyl 4-(2-pyridyl)-2,4-dioxobutanoate

[0141]

[Chem 14]

[0142]

Under argon atmosphere, 2-acetylpyridine (1.39 ml) was added dropwise to a suspension of 60% sodium hydride (0.991 g) in N,N-dimethylformamide (30 ml), and the mixture was stirred for 5 minutes at 0°C and for another 30 minutes at room temperature. To the reaction liquid was added dropwise diethyl oxalate (3.36 ml) at 0°C, and the mixture was stirred for 10 minutes and for another 18 hours at room temperature. To the reaction liquid were added water and diethylether, and the aqueous layer was separated. The aqueous layer was neutralized with 1N aqueous hydrochloric acid (24.8 ml), and the solution was extracted with ethyl acetate. The organic layer was washed twice with water, and dried over anhydrous sodium sulfate. After filtration, the solvent was evaporated under reduced pressure, and the residue was purified by column chromatography on silica gel (methanol-chloroform) to give the title compound (1.12 g, 41%) as a solid.

[0143]

¹H-NMR (400 MHz, CDCl₃) δ: 1.40-1.43 (3H, m), 4.38-4.43 (2H, m), 7.51-7.54 (1H, m), 7.62 (1H, s), 7.89-7.93 (1H, m), 8.18 (1H, d, J = 8.0 Hz), 8.73 (1H, d, J = 4.4 Hz).

MS (EI) m/z: 221 (M⁺).

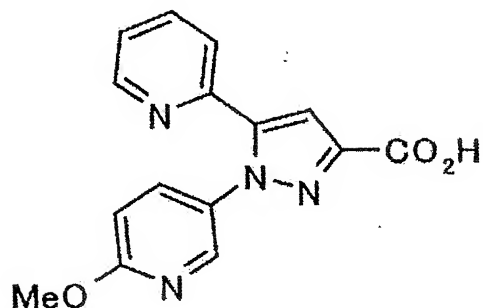

[0144]

[0152]

[Referential Example 5]

1-(6-Methoxy-3-pyridyl)-5-phenyl-1H-pyrazole-3-carboxylic acid

[0153]

[Chem 16]

[0154]

1) Ethyl 1-(6-methoxy-3-pyridyl)-5-phenyl-1H-pyrazole-3-carboxylate

To a solution of acetophenone (9.85 g) in N,N -dimethylformamide (80 ml) was added 60% sodium hydride (6.56 g) at 0°C , and the mixture was stirred for 30 minutes. A solution of diethyl oxalate (23.97 g)

in N,N-dimethylformamide (80 ml) was added dropwise to the reaction liquid over 10 minutes, and the mixture was stirred at room temperature for 13 hours. The reaction liquid was acidified by adding 1N hydrochloric acid (180 ml), and water and ethyl acetate were added and the phases were separated. The organic layer was washed with water and brine, and it was dried over anhydrous magnesium sulfate. After filtration, the solvent was evaporated under reduced pressure to give ethyl 4-phenyl-2,4-dioxobutanoate (22.96 g, measured) as an oily product. This product was used in the subsequent reaction without further purification. The thus obtained ethyl 4-phenyl-2,4-dioxobutanoate was dissolved in ethanol (200 ml), and to this was added 5-hydrazino-2-methoxypyridine (11.39 g) of Referential Example 2, and the mixture was heated under reflux for 4 hours. After cooling with air, the reaction solvent was evaporated under reduced pressure, and the residue was purified by column chromatography on silica gel (ethyl acetate-hexane) to give ethyl 1-(6-methoxy-3-pyridyl)-5-phenyl-1H-pyrazole-3-carboxylate (16.37 g, 61%) as an oily product.

[0155]

$^1\text{H-NMR}$ (400 MHz, CDCl_3) δ : 1.42 (3H, t, $J = 7.0$ Hz), 3.93 (3H, s), 4.45 (2H, q, $J = 7.0$ Hz), 6.73 (1H, d, $J = 8.8$ Hz), 7.04 (1H, s), 7.19-7.26 (2H, m), 7.30-7.37 (3H, m), 7.57 (1H, dd, $J = 8.8, 2.6$ Hz), 8.11 (1H, d, $J = 2.6$ Hz).

MS (ESI)m/z: 324 ($\text{M}+\text{H}$) $^+$.

[0156]

2) The title compound

To a solution of the ethyl 1-(6-methoxy-3-pyridyl)-5-phenyl-1H-pyrazole-3-carboxylate (16.37 g) in methanol (250 ml) was added 1N aqueous sodium hydroxide (126 ml), and the mixture was stirred for 30 minutes. The reaction solvent was evaporated under reduced pressure. Water and diethylether were added to the residue, and the aqueous layer was separated. After acidifying the aqueous layer by adding 1N aqueous hydrochloric acid (140ml), and the solution was extracted with ethyl acetate. The organic layer was washed with water and brine, and dried over anhydrous sodium sulfate. After filtration, the solvent was evaporated under reduced pressure to give the title compound (13.88 g, 92%) as a solid.

[0157]

¹H-NMR (400 MHz, CDCl₃) δ : 3.94 (3H, s), 6.75 (1H, d, J = 8.8 Hz), 7.10 (1H, s), 7.21-7.27 (2H, m), 7.32-7.39 (3H, m), 7.58 (1H, dd, J = 8.8, 2.6 Hz), 8.12 (1H, d, J = 2.6 Hz).

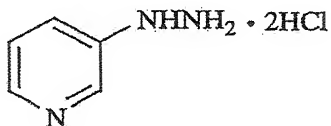

MS (ESI)m/z: 296 (M+H)⁺.

[0158]

[Referential Example 6] 3-Hydrazinopyridine hydrochloride

[0159]

[Chem 17]

[0160]

A solution of sodium nitrite (4.28 g) in water (20 ml) was added dropwise to a solution of 3-aminopyridine (5.15 g) in conc. hydrochloric acid (54 ml) at an inner temperature of 0 to 5°C over 30 minutes, and the mixture was stirred for another 5 minutes. The reaction liquid was added dropwise to a solution of tin (II) chloride dihydrate (43.68 g) in conc. hydrochloric acid (30 ml) at an inner temperature of 0 to 10°C over 1 hour, and the mixture was stirred for another 0.5 hour. The solid precipitate was collected by filtration, and this solid was washed with diethylether and dried under reduced pressure to give the title compound (16.38 g, measured).

[0161]

¹H-NMR (400 MHz, DMSO-d₆)δ: 7.93 (1H, dd, J = 8.8, 5.6 Hz), 8.09 (1H, dd, J = 8.8, 2.7 Hz), 8.43 (1H, d, J = 5.6 Hz), 8.51 (1H, d-like, J = 2.7 Hz).

MS (ESI)m/z: 109 (M)⁺.

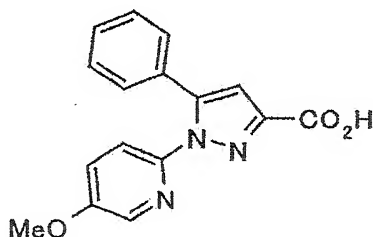

[0162]

[Referential Example 7]

1-(5-Methoxy-2-pyridyl)-5-phenyl-1H-pyrazole-3-carboxylic acid

[0163]

[Chem 18]

[0164]

1) 5-Amino-2-chloropyridine

Conc. hydrochloric acid (1 ml) was added to a solution of 2-chloro-5-nitropyridine (20 g) in a mixture of ethanol (160 ml) and water (40 ml). Iron which was reduced by hydrogen (70.5 g) was added in several portions to this mixture at room temperature and the mixture was stirred at 90°C for 1 hour. After cooling with air, the reaction liquid was filtered through celite, and the solvent was evaporated under reduced pressure. The residue was purified by chromatography on silica gel (ethyl acetate-hexane) to give the amine derivative (15.2 g, 94%) as a solid.

[0165]

$^1\text{H-NMR}$ (400 MHz, CDCl_3) δ : 3.71 (2H, br s), 6.96 (1H, dd, $J = 8.3, 2.9$ Hz), 7.08 (1H, d, $J = 8.3$ Hz), 7.85 (1H, d, $J = 2.9$ Hz).

LC-MSm/z: 129 ($\text{M}+\text{H}$) $^+$.

[0166]

2) 5-Acetoxy-2-chloropyridine

To a solution of the 5-amino-2-chloropyridine (18 g) in ethanol (360 ml) was added 48% aqueous tetrafluoroboric acid (40.5 ml), and tert-butyl nitrite (23.5 ml) was added dropwise at -5°C, and the mixture was stirred for 20 minutes. Diethylether was added to the reaction liquid, and the precipitate was collected by filtration and dried to give 6-chloropyridine-3-diazonium tetrafluoroborate (32 g, measured). A solution of this diazonium salt (32 g) in anhydrous acetic acid (160 ml) was gradually heated to 90°C, and the solution was stirred for 45 minutes. After cooling with air, the reaction solvent was evaporated under reduced pressure, and to the residue was added ethyl acetate and water, then the phases were separated. The organic layer was washed

with water and brine in this order, and dried over anhydrous magnesium sulfate. After filtration, the solvent was evaporated under reduced pressure, and the residue was purified by chromatography on silica gel (hexane-ethyl acetate) to give 5-acetoxy-2-chloropyridine (10 g, 42%) as a solid.

[0167]

$^1\text{H-NMR}$ (400 MHz, CDCl_3) δ : 2.33 (3H, s), 7.34 (1H, d, $J = 8.8$ Hz), 7.47 (1H, dd, $J = 8.8, 2.9$ Hz), 8.21 (1H, d, $J = 2.9$ Hz).

LC-MSm/z: 172 ($\text{M}+\text{H}$) $^+$.

[0168]

3) 2-Chloro-5-hydroxypyridine

Potassium carbonate (400 mg) was added to a solution of the 5-acetoxy-2-chloropyridine (10 g) in methanol (200 ml), and the mixture was stirred at room temperature for 20 hours. The reaction solvent was evaporated under reduced pressure, and the residue was purified by chromatography on silica gel (ethyl acetate) to give 2-chloro-5-hydroxypyridine (6.86 g, 91%) as a solid.

[0169]

$^1\text{H-NMR}$ (400 MHz, $\text{DMSO}-d_6$) δ : 7.24 (1H, dd, $J = 8.8, 2.9$ Hz), 7.29 (1H, d, $J = 8.8$ Hz), 7.91 (1H, d, $J = 2.9$ Hz), 10.22 (1H, br).

LC-MSm/z: 130 ($\text{M}+\text{H}$) $^+$.

[0170]

4) 2-Chloro-5-methoxypyridine

To a solution of the 2-chloro-5-hydroxypyridine (1.30 g) and methyl iodide (1.25 ml) in N,N -dimethylformamide (26 ml) was added dropwise 28% solution of sodium methoxide in methanol (2.0 ml), and the mixture was stirred at room temperature for 1.5 hours. Saturated

aqueous ammonium chloride and ethyl acetate were added to the reaction liquid, then the phases were separated. The organic layer was washed with brine and dried over anhydrous magnesium sulfate. After filtration, the solvent was evaporated under reduced pressure, and the residue was purified by chromatography on silica gel (hexane-ethyl acetate) to give 2-chloro-5-methoxypyridine (1.40 g, 98%) as a solid.

[0171]

$^1\text{H-NMR}$ (400 MHz, CDCl_3) δ : 3.85 (3H, s), 7.17-7.25 (2H, m), 8.05 (1H, d, $J = 2.9$ Hz).

LC-MSm/z: 144 ($\text{M}+\text{H}$) $^+$.

[0172]

5) 2-Hydrazino-5-methoxypyridine

A solution of the 2-chloro-5-methoxypyridine (4.0 g) in hydrazine monohydrate (30 ml) was stirred at 100°C for 24 hours. After cooling with air, the reaction solvent was evaporated under reduced pressure. To the residue was added chloroform and 1N aqueous sodium hydroxide and the phases were separated. The organic layer was dried over anhydrous magnesium sulfate. After filtration, the solvent was evaporated under reduced pressure to give

2-hydrazino-5-methoxypyridine (705 mg, 18%) as an oily product.

LC-MSm/z: 140 ($\text{M}+\text{H}$) $^+$.

[0173]

6) Ethyl 1-(5-methoxy-2-pyridyl)-5-phenyl-1H-pyrazole-3-carboxylate

A solution of the 2-hydrazino-5-methoxypyridine (705 mg) and the ethyl 2,4-dioxo-4-phenyl butanoate Referential Example 5(1) (1.12 g) in ethanol (25 ml) was heated under reflux for 19 hours. After cooling with air, the reaction solvent was evaporated under reduced

pressure. Ethyl acetate and saturated aqueous sodium bicarbonate were added to the residue and the phases were separated. The organic layer was washed with brine, and dried over anhydrous magnesium sulfate. After filtration, the solvent was evaporated under reduced pressure, and the residue was purified by chromatography on silica gel (hexane-ethyl acetate) to give ethyl 1-(5-methoxy-2-pyridyl)-5-phenyl-1H-pyrazole-3-carboxylate (705mg, 43%) as an amorphous product.

[0174]

$^1\text{H-NMR}$ (400 MHz, CDCl_3) δ : 1.42 (3H, t, $J = 7.1$ Hz), 3.88 (3H, s), 4.45 (2H, q, $J = 7.1$ Hz), 7.03 (1H, s), 7.22-7.32 (6H, m), 7.45 (1H, d, $J = 6.8$ Hz), 8.05 (1H, d, $J = 3.1$ Hz).

LC-MSm/z: 324 ($\text{M}+\text{H}$) $^+$.

[0175]

7) The title compound

To a solution of the ethyl 1-(5-methoxy-2-pyridyl)-5-phenyl-1H-pyrazole-3-carboxylate (700mg) in methanol (7 ml) and tetrahydrofuran (7 ml) was added 1N aqueous sodium hydroxide (3.5 ml), and the mixture was stirred at room temperature for 2 hours. To the reaction liquid was added 1N aqueous hydrochloric acid (3.6ml) under ice cooling, and water and ethyl acetate were added and phases were separated. The organic layer was washed with brine, and dried over anhydrous magnesium sulfate. After filtration, the solvent was evaporated under reduced pressure to give the title compound (602 mg, 94%) as a solid.

[0176]

$^1\text{H-NMR}$ (400 MHz, CDCl_3) δ : 3.89 (3H, s), 7.09 (1H, s), 7.23-7.35 (6H, m), 7.46 (1H, d, $J = 6.9$ Hz), 8.08 (1H, d, $J = 3.1$ Hz).

LC-MSm/z: 296 ($\text{M}+\text{H}$) $^+$.

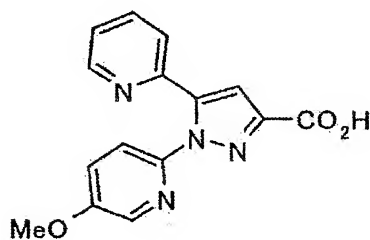

[0177]

[0178]

[Chem 19]

[0179]

1) 5-bromo-2-hydrazinopyridine

Hydrazine monohydrate (10 ml) was added to a solution of 2,5-dibromopyridine (10.0 g) in pyridine (100 ml) at room temperature, and the mixture was heated under reflux for 13 hours. After cooling with air, the reaction solvent was evaporated under reduced pressure. To the residue were added 0.5N aqueous sodium hydroxide and chloroform and phases were separated. The organic layer was dried over anhydrous sodium sulfate. After filtration, the solvent was evaporated under reduced pressure to give 5-bromo-2-hydrazinopyridine (7.61 g, 96%) as a solid.

[0180]

$^1\text{H-NMR}$ (400 MHz, DMSO-d_6) δ : 6.67 (1H, d, $J = 9.0$ Hz), 7.55 (1H, dd, $J = 9.0, 2.4$ Hz), 7.64 (1H, s), 8.00 (1H, d, $J = 2.4$ Hz).

EI-MSm/z: 188 (M^+).

[0181]

2) Ethyl

1-(5-bromo-2-pyridyl)-5-(2-pyridyl)-1H-pyrazole-3-carboxylate

To a suspension of the 5-bromo-2-hydrazinopyridine (7.12 g) and the ethyl 4-(2-pyridyl)-2,4-dioxobutanoate of Referential Example 4 (8.38 g) in ethanol (126 ml) was added acetic acid (8.67 ml) at room temperature, and the mixture was heated under reflux for 12 hours. After cooling with air, saturated aqueous sodium bicarbonate and ethyl acetate were added to the reaction liquid. The phases were separated, and the organic layer was dried over anhydrous sodium sulfate. After filtration, the solvent was evaporated under reduced pressure, and the residue was purified by column chromatography on silica gel (hexane-ethyl acetate) to give the dihydropyrazole derivative. To a solution of this dihydropyrazole derivative in ethanol (146 ml) was added conc. hydrochloric acid (4.9 ml) at room temperature, and the mixture was heated under reflux for 3 hours. After cooling with air, saturated aqueous sodium bicarbonate and ethyl acetate were added to the reaction liquid. The phases were separated, and the organic layer was dried over anhydrous sodium sulfate. After filtration, the solvent was evaporated under reduced pressure, and the residue was purified by column chromatography on silica gel (hexane-ethyl acetate) to give ethyl

1-(5-bromo-2-pyridyl)-5-(2-pyridyl)-1H-pyrazole-3-carboxylate

(11.6 g, 82%) as a solid.

[0182]

$^1\text{H-NMR}$ (400 MHz, CDCl_3) δ : 1.42 (3H, t, $J = 7.2$ Hz), 4.45 (2H, q, $J = 7.2$ Hz), 7.20 (1H, s), 7.23-7.25 (1H, m), 7.49 (1H, dd, $J = 7.8$, 0.7 Hz), 7.72-7.75 (2H, m), 7.95-7.97 (1H, m), 8.26 (1H, d, $J = 2.2$ Hz), 8.45-8.46 (1H, m).

EI-MSm/z: 373 (M^+).

[0183]

3) The title compound

Sodium methoxide (1.74 g) and copper (I) bromide (0.231 g) were added to a solution of the ethyl 1-(5-bromo-2-pyridyl)-5-(2-pyridyl)-1H-pyrazole-3-carboxylate (3.00 g) in a mixture of methanol (30 ml) and toluene (30 ml) at room temperature under argon atmosphere, and the mixture was heated under reflux for 47 hours. After cooling with air, water (50 ml) was added to the reaction liquid at room temperature, and the mixture was stirred for 1 hour and 30 minutes. To the reaction liquid were added water, acetic acid (10 ml), and a mixed solvent of methanol and chloroform (1:10), then the phases were separated. The organic layer was dried over anhydrous sodium sulfate. After filtration, the solvent was evaporated under reduced pressure to give the title compound (1.68 g, 71%) as a solid.

[0184]

$^1\text{H-NMR}$ (400 MHz, DMSO-d_6) δ : 4.17 (3H, s), 7.56-8.71 (8H, m), 13.35 (1H, s).

FAB-MSm/z: 297 ($\text{M}+\text{H}^+$).

[Referential Example 9]

1-(6-Methoxy-3-pyridazinyl)-5-(2-pyridyl)-1H-pyrazole-3-carboxylic acid

[0186]

[Chem 20]

[0187]

Method A

1) Ethyl 1-(6-chloro-3-pyridazinyl)-5-(2-pyridyl)-1H-pyrazole-3-carboxylate

A solution of 3-chloro-6-hydrazinopyridazine (1.59 g) and the ethyl 4-(2-pyridyl)-2,4-dioxobutanoate (2.45 g) of Referential Example 4 in ethanol (60 ml) was heated under reflux for 6 hours, and after adding conc. hydrochloric acid (1 ml) to the reaction liquid, the mixture was heated under reflux for another 1 hour. After cooling with air, the reaction solvent was evaporated under reduced pressure. Ethyl acetate and saturated aqueous sodium bicarbonate were added to the residue and the phases were separated. The organic layer was washed with brine, and dried over anhydrous magnesium sulfate. After filtration, the solvent was evaporated under reduced pressure, and the residue was purified by chromatography on silica gel (ethyl acetate-hexane) to give ethyl

1-(6-chloro-3-pyridazinyl)-5-(2-pyridyl)-1H-pyrazole-3-carboxylate (1.50 g, 41%) as a solid.

[0188]

$^1\text{H-NMR}$ (400 MHz, CDCl_3) δ : 1.44 (3H, t, $J = 7.0$ Hz), 4.46 (2H, q, $J = 7.0$ Hz), 7.23 (1H, s), 7.24-7.27 (1H, m), 7.62-7.65 (1H, m), 7.69 (1H, d, $J = 9.0$ Hz), 7.76-7.81 (1H, m), 8.10 (1H, d, $J = 9.0$ Hz), 8.40 (1H, d, $J = 4.6$ Hz).

LC-MSm/z: 330 ($\text{M}+\text{H}$) $^+$.

[0189]

2) Methyl 1-(6-methoxy-3-pyridazinyl)-5-(2-pyridyl)-1H-pyrazole-3-carboxylate

To a solution of the ethyl 1-(6-chloro-3-pyridazinyl)-5-(2-pyridyl)-1H-pyrazole-3-carboxylate (1.50 g) in methanol (45 ml) was added 28% solution of sodium methoxide in methanol (3 ml), and the mixture was heated under reflux for 2 hours. After cooling with air, the reaction liquid was evaporated under reduced pressure. Ethyl acetate and saturated aqueous sodium bicarbonate was added to the residue, then the phases were separated. The organic layer was dried over anhydrous magnesium sulfate. After filtration, the solvent was evaporated under reduced pressure, and the residue was purified by chromatography on silica gel (ethyl acetate-hexane) to give methyl 1-(6-methoxy-3-pyridazinyl)-5-(2-pyridyl)-1H-pyrazole-3-carboxylate (480 mg, 34%) as a solid.

[0190]

$^1\text{H-NMR}$ (400 MHz, CDCl_3) δ : 3.99 (3H, s), 4.10 (3H, s), 7.15 (1H, d, $J = 9.3$ Hz), 7.21-7.23 (1H, m), 7.24 (1H, s), 7.58-7.61 (1H, m), 7.73-7.78 (1H, m), 7.93 (1H, d, $J = 9.3$ Hz), 8.40-8.41 (1H, m).

LC-MSm/z: 312 ($\text{M}+\text{H}$) $^+$.

[0191]

3) The title compound

To a solution of the methyl 1-(6-methoxy-3-pyridazinyl)-5-(2-pyridyl)-1H-pyrazole-3-carboxylate (475 mg) in ethanol (10 ml) and tetrahydrofuran (10 ml) was added 1N aqueous sodium hydroxide (3 ml), and the mixture was stirred at room temperature for 20 hours. To the reaction liquid was added 1N aqueous hydrochloric acid (3 ml) for neutralization under ice cooling, and a mixed solvent of chloroform and methanol (10:1) was added to the reaction liquid. And then the phases were separated. The organic layer was dried over anhydrous magnesium sulfate. After filtration, the solvent was evaporated under reduced pressure to give the title compound (300 mg, 66%) as a solid.

[0192]

$^1\text{H-NMR}$ (400 MHz, DMSO-d_6) δ : 4.04 (3H, s), 7.32-7.35 (1H, m), 7.41 (1H, s), 7.49 (1H, d, $J = 9.3$ Hz), 7.80-7.82 (1H, m), 7.87-7.91 (1H, m), 7.99 (1H, d, $J = 9.3$ Hz), 8.35-8.36 (1H, m).

LC-MSm/z: 298 ($\text{M}+\text{H}$) $^+$.

[0193]

Method B

1) Methyl 4-(2-pyridyl)-2,4-dioxobutanoate

Under argon atmosphere, a solution of 2-acetylpyridine (2.56 g) in methanol (26 ml) was added to a solution of dimethyl oxalate

(5.00 g) and sodium methoxide (2.29 g) in methanol (26 ml) at room temperature, and the mixture was stirred for 15 minutes. The mixture was stirred for another 45 minutes at 60°C. After cooling with air, water and diethylether were added to the reaction solution, then the aqueous layer was separated. To the aqueous layer were added saturated aqueous ammonium chloride and chloroform, then the phases were separated. The organic layer was dried over anhydrous sodium sulfate. After filtration, the solvent was evaporated under reduced pressure to give methyl 4-(2-pyridyl)-2,4-dioxobutanoate (3.44 g, 79%) as a solid.

[0194]

¹H-NMR (400 MHz, CDCl₃)δ: 3.94 (3H, s), 7.54-7.50 (1H, m), 7.64 (1H, s), 7.93-7.89 (1H, m), 8.19-8.16 (1H, m), 8.74-8.72 (1H, m).

EI-MSm/z: 207 (M⁺).

[0195]

2) Methyl 1-(6-chloro-3-pyridazinyl)-5-(2-pyridyl)-1H-pyrazole-3-carboxylate

A solution of the methyl 4-(2-pyridyl)-2,4-dioxobutanoate (4.143 g) and 3-chloro-6-hydrazinopyridazine (2.891 g) in methanol (100 ml) was heated under reflux for 109 hours. To the reaction liquid was added conc. hydrochloric acid (2 ml), and the mixture was heated under reflux for another 6 hours. After cooling with air, saturated aqueous sodium bicarbonate and ethyl acetate were added to the reaction liquid, then the phases were separated. The organic layer was washed with water and brine and dried over anhydrous sodium sulfate. After filtration, the solvent was evaporated under reduced pressure to give methyl

1-(6-chloro-3-pyridazinyl)-5-(2-pyridyl)-1H-pyrazole-3-carboxylate (3.169 g, 50%) as a solid.

[0196]

¹H-NMR (400 MHz, CDCl₃)δ: 4.00 (3H, s), 7.24-7.28 (1H, m), 7.24 (1H, s), 7.64 (1H, dt, J = 7.8, 1.2 Hz), 7.70 (1H, d, J = 9.0 Hz), 7.79 (1H, td, J = 7.8, 1.7 Hz), 8.09 (1H, d, J = 9.0 Hz), 8.38-8.41 (1H, m).

ESI-MSm/z: 316 (M+H)⁺.

[0197]

3) Methyl 1-(6-methoxy-3-pyridazinyl)-5-(2-pyridyl)-1H-pyrazole-3-carboxylate

Sodium methoxide (1.530 g) was added to a solution of the methyl 1-(6-chloro-3-pyridazinyl)-5-(2-pyridyl)-1H-pyrazole-3-carboxylate (2.981 g) in methanol (190 ml) at room temperature, and the mixture was stirred for 19 hours. To the reaction liquid was added 1N aqueous hydrochloric acid (19 ml), and methanol was evaporated under reduced pressure. Water was added to the residue, and the insoluble content was collected by filtration and dried to give methyl 1-(6-methoxy-3-pyridazinyl)-5-(2-pyridyl)-1H-pyrazole-3-carboxylate (2.571 g, 87%) as a solid.

[0198]

4) The title compound

1N aqueous sodium hydroxide (15 ml) was added to a solution of the methyl 1-(6-methoxy-3-pyridazinyl)-5-(2-pyridyl)-1H-pyrazole-3-carboxylate (2.20 g) in a mixture of methanol (30 ml) and tetrahydrofuran (30 ml) at room temperature, and the mixture was stirred for 2.5 hours. To the reaction liquid was added a mixed solvent of 1N aqueous

hydrochloric acid (15 ml) for neutralization under ice cooling, and a mixed solvent of chloroform-methanol (10:1) was added to the reaction solution. The phases were separated. The organic layer was dried over anhydrous sodium sulfate. After filtration, the solvent was evaporated under reduced pressure, and isopropylether was added to the residue. The precipitated solid was collected by filtration to give the title compound (1.42 g, 47.6%).

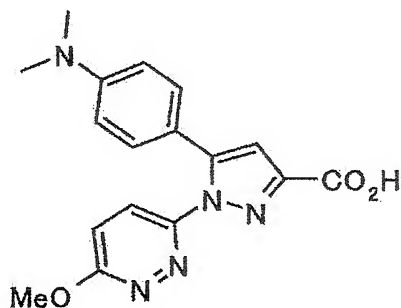

[0199]

[Referential Example 13] Lithium

1-(6-methoxy-3-pyridyl)-5-(3-pyridazinyl)-1H-pyrazole-3-carboxylate

[0222]

[Chem 24]

[0223]

1) Methyl 4-(3-pyridazinyl)-2,4-dioxobutanoate

A 1.0M solution of lithium bis(trimethylsilyl)amide in tetrahydrofuran (19 ml) was added dropwise to a solution of 3-acetylpyridazine (2.097 g) in tetrahydrofuran (50 ml) under argon atmosphere at -78°C , and the mixture was stirred for 1 hour. A solution of dimethyl oxalate (4.055 g) in tetrahydrofuran (35 ml) was added dropwise to the reaction liquid, and the mixture was stirred at 0°C for 2 hours. The reaction solvent was evaporated under reduced pressure, and water and diethylether were added to the residue, then the aqueous layer was separated. The aqueous layer was then acidified with 1N aqueous hydrochloric acid, and the solution was extracted with ethyl acetate. The organic layer was dried over anhydrous sodium sulfate. After filtration, the solvent was evaporated under reduced pressure to give methyl 4-(3-pyridazinyl)-2,4-dioxobutanoate (2.63 g, 73%) as a solid.

[0224]

$^1\text{H-NMR}$ (400 MHz, CDCl_3) δ : 3.97 (3H, s), 7.73 (1H, dd, $J = 8.5, 5.1$ Hz), 7.96 (1H, s), 8.28 (1H, dd, $J = 8.5, 1.8$ Hz), 9.38 (1H, dd, $J = 5.1, 1.8$ Hz).

ESI-MSm/z: 209 ($\text{M}+\text{H}$) $^+$.

[0225]

2) Methyl 1-(6-methoxy-3-pyridyl)-5-(3-pyridazinyl)-1H-pyrazole-3-carboxylate

The 5-hydrazino-2-methoxypyridine (726 mg) of Referential Example 2 was added to a solution of the methyl 4-(3-pyridazinyl)-2,4-dioxobutanoate (1.086 g) in methanol (10 ml), and the mixture was heated under reflux for 4 hours. After cooling with air, the reaction solvent was evaporated under reduced pressure, and the residue was purified by thin layer chromatography on silica gel (ethyl acetate) to give methyl 1-(6-methoxy-3-pyridyl)-5-(3-pyridazinyl)-1H-pyrazole-3-carboxylate (309 mg, 19%) as a solid.

[0226]

$^1\text{H-NMR}$ (400 MHz, CDCl_3) δ : 3.95 (3H, s), 4.00 (3H, s), 6.80 (1H, d, $J = 8.8$ Hz), 7.43 (1H, s), 7.51 (2H, d, $J = 3.4$ Hz), 7.70 (1H, dd, $J = 8.8, 2.7$ Hz), 8.11 (1H, d, $J = 2.7$ Hz), 9.15 (1H, t, $J = 3.4$ Hz).
ESI-MSm/z: 312 ($\text{M}+\text{H}$) $^+$.

[0227]

3) The title compound

Lithium hydroxide monohydrate (42 mg) was added to a solution of the methyl 1-(6-methoxy-3-pyridyl)-5-(3-pyridazinyl)-1H-pyrazole-3-carboxylate (309 mg) in methanol (20 ml), and the mixture was heated under reflux

for 18 hours. After cooling with air, the reaction solvent was evaporated under reduced pressure to give the title compound (322 mg, measured) as an amorphous product.

ESI-MSm/z: 298 (M+H)⁺.

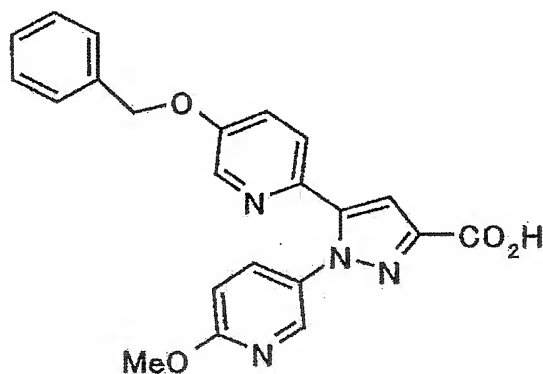

[0228]

[Referential Example 14]

5-(5-Benzyloxy-2-pyridyl)-1-(6-methoxy-3-pyridyl)-1H-pyrazole-3-carboxylic acid

[0229]

[Chem 25]

[0230]

1) 5-Benzyloxy-2-methylpyridine

Benzyl bromide (10.9 ml) was added to a solution of 3-hydroxy-6-methylpyridine (10.0 g) and potassium carbonate (38.0) in acetonitrile (200 ml) at room temperature, and the mixture was stirred for 12 hours. Water and ethyl acetate were added to the reaction liquid, then the phases were separated. The organic layer was dried over anhydrous sodium sulfate. After filtration, the solvent was evaporated

under reduced pressure, and the residue was purified by column chromatography on silica gel (ethyl acetate-hexane) to give 5-benzyloxy-2-methylpyridine (4.14 g, 23%) as an oily product.

[0231]

$^1\text{H-NMR}$ (400 MHz, CDCl_3) δ : 2.48 (3H, s), 5.08 (2H, s), 7.05 (1H, d, $J = 8.5$ Hz), 7.16 (1H, dd, $J = 8.5, 2.9$ Hz), 7.31-7.43 (5H, m), 8.26 (1H, d, $J = 2.9$ Hz).

EI-MS m/z : 199 (M^+).

[0232]

2) 1-(5-Benzyloxy-2-pyridyl)ethanone

Selenium dioxide (9.20 g) was added to a solution of the 5-benzyloxy-2-methylpyridine (4.13 g) in pyridine (83 ml) at room temperature, and the mixture was heated under reflux for 61 hours. After cooling with air, water and chloroform were added to the reaction liquid, then the phases were separated. The organic layer was dried over anhydrous magnesium sulfate. After filtration, the solvent was evaporated under reduced pressure, and triethylamine (6.35 ml) was added to a solution of the residue, N, O-dimethyl hydroxylamine hydrochloride (2.22 g), 1-ethyl-3-(3-dimethylaminopropyl)carbodiimide hydrochloride (4.37 g), and 1-hydroxybenzotriazole (3.08 g) in N,N-dimethylformamide (95 ml) at room temperature, and the mixture was stirred for 61 hours. Water and ethyl acetate were added to the reaction liquid and the phases were separated, and the organic layer was dried over anhydrous sodium sulfate. After filtration, the solvent was evaporated under reduced pressure, and the residue was purified by column chromatography on silica gel (ethyl acetate-hexane) to give

5-benzyloxypyridine-2-carboxylic acid methoxymethylamide (3.75 g, 66%) as an oily product. (FAB-MSm/z: 273(M+H)⁺.)

Under argon atmosphere, a 1.10M solution of methyl lithium in diethylether (13.7 ml) was added dropwise to a solution of the 5-benzyloxypyridine-2-carboxylic acid methoxymethylamide (3.74 g) in tetrahydrofuran (75 ml) at 0°C, and the mixture was stirred for 40 minutes. Water and ethyl acetate were added to the reaction liquid and the phases were separated, and the organic layer was dried over anhydrous sodium sulfate. After filtration, the solvent was evaporated under reduced pressure, and the residue was purified by column chromatography on silica gel (ethyl acetate-hexane) to give 1-(5-benzyloxy-2-pyridyl)ethanone (1.47 g, 47%) as an oily product.

[0233]

¹H-NMR (400 MHz, CDCl₃)δ: 2.67 (3H, s), 5.18 (2H, s), 7.30-7.45 (6H, m), 8.03 (1H, d, J = 8.8 Hz), 8.39 (1H, d, J = 2.7 Hz).

EI-MS m/z: 227 (M⁺).

[0234]

3) Ethyl 4-(5-benzyloxy-2-pyridyl)-2,4-dioxobutanoate

A solution of diethyl oxalate (1.75 ml) and the 1-(5-benzyloxy-2-pyridyl)ethanone (1.46 g) in ethanol (15 ml) were added to a solution of sodium ethoxide (0.874 g) in ethanol (15 ml) under argon atmosphere, and the mixture was stirred at room temperature for 7 hours and for another 1 hour at 60°C. After cooling with air, sodium ethoxide (0.874 g) and diethyl oxalate (1.75 ml) were added to the reaction liquid, and the mixture was stirred at 60°C for 1 hour. After cooling with air, water and diethylether were added to the reaction liquid, and the aqueous layer was separated. To the aqueous layer

were added saturated aqueous ammonium chloride and chloroform, and the phases were separated. The organic layer was dried over anhydrous sodium sulfate. After filtration, the solvent was evaporated under reduced pressure to give ethyl

4-(5-benzyloxy-2-pyridyl)-2,4-dioxobutanoate (1.38 g, 66%) as a solid.

[0235]

$^1\text{H-NMR}$ (400 MHz, CDCl_3) δ : 1.38-1.42 (3H, m), 4.35-4.42 (2H, m), 5.20 (2H, s), 7.35-7.44 (6H, m), 7.59 (1H, s), 8.14 (1H, d, $J = 8.8$ Hz), 8.44 (1H, d, $J = 2.7$ Hz).

EI-MS m/z : 327 (M^+).

[0236]

4) Ethyl

5-(5-benzyloxy-2-pyridyl)-1-(6-methoxy-3-pyridyl)-1H-pyrazole-3-carboxylate

Acetic acid (0.958 ml) was added to a solution of the ethyl 4-(5-benzyloxy-2-pyridyl)-2,4-dioxobutanoate (1.37 g) and the 5-hydrazino-2-methoxypyridine (0.699 g) of Referential Example 2 in ethanol (27 ml), and the mixture was heated under reflux for 12 hours. After cooling with air, saturated aqueous sodium bicarbonate and ethyl acetate were added to the reaction liquid and the phases were separated, and the organic layer was dried over anhydrous sodium sulfate. After filtration, the solvent was evaporated under reduced pressure, and the residue was purified by column chromatography on silica gel (ethyl acetate-hexane) to give ethyl

5-(5-benzyloxy-2-pyridyl)-1-(6-methoxy-3-pyridyl)-1H-pyrazole-3-carboxylate (1.50 g, 83%) as a solid.

[0237]

$^1\text{H-NMR}$ (400 MHz, CDCl_3) δ : 1.42 (3H, t, $J = 7.1$ Hz), 3.95 (3H, s), 4.45 (2H, q, $J = 7.1$ Hz), 5.10 (2H, s), 6.76 (1H, d, $J = 8.8$ Hz), 7.18-7.42 (8H, m), 7.66 (1H, dd, $J = 8.8, 2.7$ Hz), 8.10 (1H, d, $J = 2.7$ Hz), 8.28 (1H, d, $J = 2.7$ Hz).

FAB-MSm/z: 431 ($\text{M}+\text{H}$) $^+$.

[0238]

5) The title compound

1N sodium hydroxide (8.65 ml) was added to a solution of the ethyl

5-(5-benzyloxy-2-pyridyl)-1-(6-methoxy-3-pyridyl)-1H-pyrazole-3-carboxylate (1.49 g) in a mixture of methanol (30 ml) and tetrahydrofuran (30 ml) at room temperature, and the mixture was stirred for 90 minutes. After evaporation of the reaction solvent under reduced pressure, the residue was dissolved in water and chloroform, and 1N aqueous hydrochloric acid (8.65 ml) was added to the solution, and the phases were separated. The organic layer was dried over anhydrous sodium sulfate. After filtration, the solvent was evaporated under reduced pressure to give the title compound (1.27 g, 91%) as a solid.

[0239]

$^1\text{H-NMR}$ (400 MHz, CDCl_3) δ : 3.95 (3H, s), 5.11 (2H, s), 6.75-6.78 (1H, m), 7.22-7.41 (8H, m), 7.66 (1H, dd, $J = 8.8, 2.7$ Hz), 8.11 (1H, dd, $J = 2.7, 0.7$ Hz), 8.30 (1H, dd, $J = 2.7, 0.7$ Hz).

EI-MSm/z: 402 (M^+).

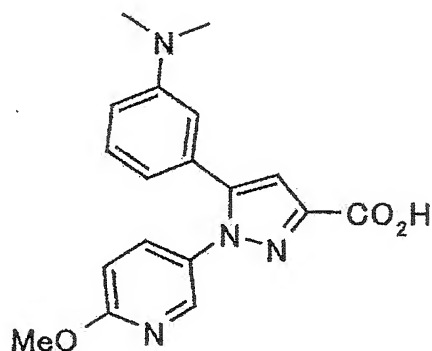

[0240]

[Referential Example 15]

5-(3-Dimethylaminophenyl)-1-(6-methoxy-3-pyridyl)-1H-pyrazole-3-carboxylic acid

[0241]

[Chem 26]

[0242]

1) Ethyl

5-(3-dimethylaminophenyl)-1-(6-methoxy-3-pyridyl)-1H-pyrazole-3-carboxylate

A solution of 1-(3-dimethylaminophenyl)-1-ethanone (1.63 g) in ethanol (20 ml) and diethyl oxalate (3.10 ml) were added to a solution of sodium ethoxide (1.63 g) in ethanol (20 ml), and the mixture was stirred at room temperature for 1 hour. To the reaction liquid was added the 5-hydrazino-2-methoxypyridine hydrochloride (2.52 g) of Referential Example 1, and the mixture was heated under reflux for 14.5 hours. After cooling with air, the reaction solvent was evaporated under reduced pressure. To the residue were added ethyl acetate and saturated aqueous sodium bicarbonate, and the phases were separated, and the organic layer was dried over anhydrous sodium sulfate. After filtration, the solvent was evaporated under reduced pressure, and the residue was purified by column chromatography on silica gel (ethyl

acetate-hexane) to give ethyl

5-(3-dimethylaminophenyl)-1-(6-methoxy-3-pyridyl)-1H-pyrazole-3-carboxylate (3.30 g, 90%) as an oily product.

[0243]

$^1\text{H-NMR}$ (400 MHz, CDCl_3) δ : 1.43 (3H, t, $J = 7.1$ Hz), 2.87 (6H, s), 3.93 (3H, s), 4.46 (2H, q, $J = 7.1$ Hz), 6.50 (1H, d, $J = 7.6$ Hz), 6.54-6.55 (1H, m), 6.69 (1H, dd, $J = 8.3, 2.4$ Hz), 6.73 (1H, d, $J = 8.8$ Hz), 7.03 (1H, s), 7.16 (1H, dd, $J = 8.1, 7.8$ Hz), 7.59 (1H, dd, $J = 8.8, 2.7$ Hz), 8.15 (1H, d, $J = 2.7$ Hz).

ESI-MSm/z: 367 (M+H) $^+$.

[0244]

2) The title compound

1N aqueous sodium hydroxide (22.5 ml) was added to a solution of the ethyl

5-(3-dimethylaminophenyl)-1-(6-methoxy-3-pyridyl)-1H-pyrazole-3-carboxylate (3.30 g) in methanol (70 ml), and the mixture was stirred at room temperature for 3.5 hours. The solid precipitate was collected by filtration to give sodium salt of the title compound (1.55 g, 47%). After evaporation of the methanol under reduced pressure, water was added to the residue. 1N aqueous hydrochloric acid (22.5 ml) and ethyl acetate were added to the solution, and the phases were separated, and the organic layer was dried over anhydrous magnesium sulfate. After filtration, the solvent was evaporated under reduced pressure to give the title compound (1.56 g, 51%) as an amorphous product.

[0245]

$^1\text{H-NMR}$ (400 MHz, CDCl_3) δ : 2.88 (6H, s), 3.94 (3H, s), 6.50-6.52 (1H, m), 6.55-6.56 (1H, m), 6.71 (1H, dd, $J = 8.3, 2.7$ Hz), 6.74 (1H, d,

$J = 8.8$ Hz), 7.09 (1H, s), 7.18 (1H, dd, $J = 8.3, 7.8$ Hz), 7.59 (1H, dd, $J = 8.8, 2.7$ Hz), 8.16 (1H, d, $J = 2.7$ Hz).

ESI-MSm/z: 339 (M+H)⁺.

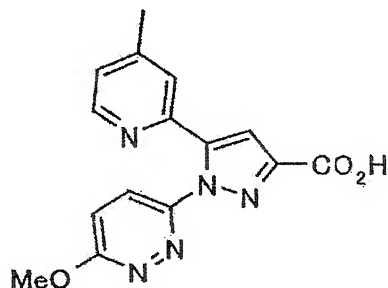

[0246]

[Referential Example 16]

1-(6-Methoxy-3-pyridazinyl)-5-(4-methyl-2-pyridyl)-1H-pyrazole-3-carboxylic acid

[0247]

[Chem 27]

[0248]

1) 1-(4-methyl-2-pyridyl)ethanone

A 1.58M solution of n-butyllithium in hexane (17 ml) was added dropwise over 10 minutes to a solution of 2-bromo-4-picoline (3.0 g) in diethylether (45 ml) at -78°C, and the solution was stirred for 20 minutes. N,N-dimethyl acetamide (2.5 ml) was added dropwise to the reaction liquid, and the temperature of the reaction liquid was gradually elevated to room temperature, and the mixture was stirred for 2 hours. Water and ethyl acetate were added to the reaction liquid and the phases were separated, and the organic layer was dried over anhydrous magnesium sulfate. After filtration, the solvent was

evaporated under reduced pressure, and the residue was purified by column chromatography on silica gel (hexane-ethyl acetate) to give 1-(4-methyl-2-pyridyl)ethanone (1.64 g, 70%) as an oily product.

[0249]

$^1\text{H-NMR}$ (400 MHz, CDCl_3) δ : 2.38 (3H, s), 2.66 (3H, s), 7.23 (1H, dd, $J = 4.88, 0.86$ Hz), 7.81 (1H, d, $J = 0.86$ Hz), 8.48 (1H, d, $J = 4.88$ Hz).

[0250]

2) Ethyl 4-(4-methyl-2-pyridyl)-2,4-dioxobutanoate

Diethyl oxalate (3.3ml) was added to a solution of sodium methoxide (1.66 g) in ethanol (50 ml) at room temperature, and the mixture was stirred for 10 minutes. The 1-(4-methyl-2-pyridyl)ethanone (1.64 g) was then added and the mixture was stirred for 30 minutes. After water and diethylether were added to the reaction liquid, the aqueous layer was separated. The aqueous layer was adjusted to pH 2 with 1N aqueous hydrochloric acid, and chloroform was added to the solution, and the phases were separated. The organic layer was dried over anhydrous magnesium sulfate. After filtration, the solvent was evaporated under reduced pressure to give ethyl

4-(4-methyl-2-pyridyl)-2,4-dioxobutanoate (2.35 g, 82%) as a solid.

[0251]

$^1\text{H-NMR}$ (400 MHz, CDCl_3) δ : 1.40 (3H, t, $J = 7.08$ Hz), 2.49 (3H, s), 4.39 (2H, q, $J = 7.08$ Hz), 7.38 (1H, d, $J = 4.88$ Hz), 7.47 (1H, br), 8.01 (1H, s), 8.60 (1H, d, $J = 4.88$ Hz).

[0270]

[Referential Example 19]

1-(5-Ethylthio-1,3,4-thiadiazol-2-yl)-5-(2-pyridyl)-1H-pyrazole-3-carboxylic acid

[0271]

[Chem 30]

[0272]

1) 2-Chloro-5-ethylthio-1,3,4-thiadiazole

To a solution of copper (0.40 g) in conc. hydrochloric acid (60 ml) was added 2-amino-5-ethylthio-1,3,4-thiadiazole (4.0 g), and a solution of sodium nitrite (1.88 g) in water (17 ml) was gradually added dropwise to the reaction liquid. The mixture was stirred for 10 minutes at 0°C, and for another 4 hours at room temperature. Water and chloroform were added to the reaction liquid and the phases were separated, and the organic layer was dried over anhydrous sodium sulfate. After filtration, the solvent was evaporated under reduced pressure, and the residue was purified by column chromatography on silica gel

(chloroform) to give 2-chloro-5-ethylthio-1,3,4-thiadiazole (2.99 g, 67%) as an oily product.

[0273]

$^1\text{H-NMR}$ (400 MHz, CDCl_3) δ : 1.44-1.48 (3H, m), 3.30-3.36 (2H, m).

FAB-MSm/z: 181 ($\text{M}+\text{H}$) $^+$.

[0274]

2) 5-Ethylthio-2-hydrazino-1,3,4-thiadiazole

Hydrazine monohydrate (10 ml) was added to a solution of the 2-chloro-5-ethylthio-1,3,4-thiadiazole (2.98 g) in ethanol (30 ml) at room temperature, and the mixture was heated under reflux for 1 hour. After cooling with air, the reaction solvent was evaporated under reduced pressure. Water and a mixed solvent of chloroform and methanol were added to the residue, and the phases were separated. The solvent of the organic layer was evaporated under reduced pressure to give 5-ethylthio-2-hydrazino-1,3,4-thiadiazole (2.60 g, 89%) as a solid.

[0275]

$^1\text{H-NMR}$ (400 MHz, CDCl_3) δ : 1.39 (3H, t, $J = 7.3$ Hz), 3.11 (2H, q, $J = 7.3$ Hz), 4.39 (2H, br s).

EI-MSm/z: 176 (M^+).

[0276]

3) Methyl

1-(5-ethylthio-1,3,4-thiadiazol-2-yl)-5-(2-pyridyl)-1H-pyrazole-3-carboxylate

The procedure of Referential Example 9, Method B(2) was repeated by using the methyl 4-(2-pyridyl)-2,4-dioxobutanoate (3.04 g) of Referential Example 9, Method B(1) and the

5-ethylthio-2-hydrazino-1,3,4-thiadiazole (2.59 g) to give methyl 1-(5-ethylthio-1,3,4-thiadiazol-2-yl)-5-(2-pyridyl)-1H-pyrazole-3-carboxylate (1.41 g, 28%) as a solid.

[0277]

$^1\text{H-NMR}$ (400 MHz, CDCl_3) δ : 1.43-1.47 (3H, m), 3.29-3.34 (2H, m), 3.98 (3H, m), 7.20 (1H, m), 7.30-7.33 (1H, m), 7.63-7.65 (1H, m), 7.76-7.81 (1H, m), 8.56-8.58 (1H, m).

EI-MSm/z: 347 (M^+).

[0278]

4) The title compound

1N sodium hydroxide (6.98 ml) was added to a solution of the methyl

1-(5-ethylthio-1,3,4-thiadiazol-2-yl)-5-(2-pyridyl)-1H-pyrazole-3-carboxylate (0.970 g) in a mixture of methanol (9.7 ml) and tetrahydrofuran (9.7 ml) at room temperature, and the mixture was stirred for 30 minutes. To the reaction liquid was added 1N aqueous hydrochloric acid (6.98 ml) and a mixed solvent of chloroform and methanol, and the phases were separated, and the solvent of the organic layer was evaporated under reduced pressure to give the title compound (0.929 g, 100%) as a solid.

[0279]

$^1\text{H-NMR}$ (400 MHz, DMSO-d_6) δ : 1.38 (3H, t, $J = 7.3$ Hz), 3.32 (2H, q, $J = 7.2$ Hz), 7.37 (1H, s), 7.40-7.43 (1H, m), 7.83-7.85 (1H, m), 7.90-7.94 (1H, m), 8.50-8.51 (1H, m), 13.48 (1H, br s).

EI-MSm/z: 333 (M^+).

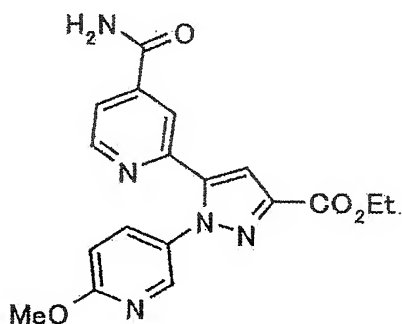

[0280]

[Referential Example 20] Ethyl

5-(4-carbamoyl-2-pyridyl)-1-(6-methoxy-3-pyridyl)-1H-pyrazole-3-carboxylate

[0290]

[Referential Example 22]

1-(6-Methoxy-3-pyridyl)-5-(2-pyrazinyl)-1H-pyrazole-3-carboxylic acid

[0291]

[Chem 33]

[0292]

A 1.0M solution of lithium bis(trimethylsilyl)amide in tetrahydrofuran (11.0 ml) was added to a solution of 1-(2-pyrazinyl)-1-ethanone (1.22 g) in tetrahydrofuran (10 ml) at -78°C , and the mixture was stirred for 55 minutes. Diethyl oxalate (2.05 ml) was then added to the solution and the temperature of the mixture was gradually elevated to room temperature. After stirring the mixture for 6.5 hours, 1N aqueous hydrochloric acid (11 ml), water, and diethylether were added to the reaction liquid and the phases were separated. The aqueous layer was then saturated with sodium chloride and extracted with ethyl acetate, and the combined organic layers were evaporated under reduced pressure to give crude ethyl 4-(2-pyrazinyl)-2,4-dioxobutanoate (1.83 g, 82%) as a solid. To a suspension of this crude product (1.58 g) in ethanol (20 ml) was added a solution prepared by adding triethylamine (1.9 ml) to a suspension of the 5-hydrazino-2-methoxypyridine hydrochloride (1.50 g) of Referential Example 1 in ethanol (80 ml), and the mixture was heated under reflux for 19 hours. Acetic acid (5 ml) was added to the reaction liquid, and the mixture was heated under reflux for 1.5 days. After cooling with air, ethyl acetate and saturated aqueous sodium bicarbonate

was added to the reaction liquid and the phases were separated, and the organic layer was dried over anhydrous sodium sulfate. After filtration, the solvent was evaporated under reduced pressure, and the residue was purified by column chromatography on silica gel (ethyl acetate-hexane) to give ethyl 1-(6-methoxy-3-pyridyl)-5-(2-pyrazinyl)-1H-pyrazole-3-carboxylate (1.05 g, 45%) as a solid. 1N aqueous sodium hydroxide (10.0 ml) was added to a solution of this ethyl 1H-pyrazole-3-carboxylate derivative (1.05 g) in ethanol (30 ml) at room temperature for 16 hours. 1N aqueous hydrochloric acid (15 ml), water, and ethyl acetate were added to the reaction liquid and the phases were separated, and the organic layer was dried over anhydrous magnesium sulfate. After filtration, the solvent was evaporated under reduced pressure to give the crude product of the title compound (0.883 g, 92%) as a solid. This crude product was used in the subsequent reaction without further purification.

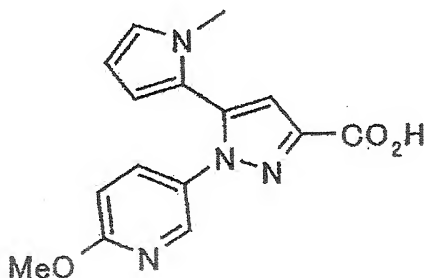

[0293]

[Referential Example 23]

1-(6-Methoxy-3-pyridyl)-5-(1-methyl-1H-2-pyrrolyl)-1H-pyrazole-3-carboxylic acid

[0294]

[Chem 34]

[0295]

The procedure of Referential Example 22 was repeated by using 1-(1-methyl-1H-2-pyrrolyl)-1-ethanone (1.19 ml) to give crude product of the title compound (2.57 g, quantitative) as an amorphous product.

[0296]

[Referential Example 24]

5-(4-Cyanophenyl)-1-(3-pyridyl)-1H-pyrazole-3-carboxylic acid

1) Ethyl 4-(4-bromophenyl)-2,4-dioxobutanoate

The procedure of Referential Example 16(2) was repeated by using 4-bromoacetophenone (8.50 g), diethyl oxalate (11.6 ml), and sodium ethoxide to give ethyl 4-(4-bromophenyl)-2,4-dioxobutanoate (10.4 g, 81%) as a solid.

[0297]

¹H-NMR (400 MHz, CDCl₃)δ: 1.40-1.43 (3H, m), 4.38-4.43 (2H, m), 7.03 (1H, s), 7.63-7.67 (2H, m), 7.84-7.87 (2H, m).

FAB-MSm/z: 299, 301 (M+H)⁺.

[0298]

2) Ethyl 5-(4-bromophenyl)-1-(3-pyridyl)-1H-pyrazole-3-carboxylate

The procedure of Referential Example 8(2) was repeated by using the ethyl 4-(4-bromophenyl)-2,4-dioxobutanoate (7.00 g) and the 3-hydrazinopyridine (2.55 g) of Referential Example 18(1) to give ethyl 5-(4-bromophenyl)-1-(3-pyridyl)-1H-pyrazole-3-carboxylate (3.83 g, 44%) as a solid.

[0299]

$^1\text{H-NMR}$ (400 MHz, CDCl_3) δ : 1.44 (3H, t, $J = 7.1$ Hz), 4.47 (2H, q, $J = 7.1$ Hz), 7.07-7.10 (3H, m), 7.34-7.38 (1H, m), 7.47-7.51 (2H, m), 7.71-7.74 (1H, m), 8.57-8.58 (1H, m), 8.62 (1H, dd, $J = 4.8, 1.6$ Hz).
 EI-MSm/z: 371, 373 (M^+).

[0300]

3) Ethyl 5-(4-cyanophenyl)-1-(3-pyridyl)-1H-pyrazole-3-carboxylate

A solution of the ethyl 5-(4-bromophenyl)-1-(3-pyridyl)-1H-pyrazole-3-carboxylate (1.50 g), zinc cyanide (0.284 g), and tetrakis (triphenylphosphine)palladium(0) (0.233 g) in N,N-dimethylformamide (30 ml) was stirred at 100°C for 18 hours under argon atmosphere. After cooling with air, zinc cyanate (2.35 g) and tetrakis (triphenylphosphine)palladium(0) (1.864 g) were added and the mixture was stirred at 100°C for 30 hours. After cooling with air, 2N aqueous ammonia solution, ethyl acetate and chloroform were added to the reaction liquid and the phases were separated, and the organic layer was washed with water and dried over anhydrous sodium sulfate. After filtration, the solvent was evaporated under reduced pressure, and the residue was purified by column chromatography on silica gel (ethyl acetate-chloroform) to give ethyl 5-(4-cyanophenyl)-1-(3-pyridyl)-1H-pyrazole-3-carboxylate (0.460 g, 36%) as an amorphous product.

[0301]

$^1\text{H-NMR}$ (400 MHz, CDCl_3) δ : 1.44 (3H, t, $J = 7.2$ Hz), 4.48 (2H, q, $J = 7.2$ Hz), 7.16 (1H, s), 7.33-7.36 (2H, m), 7.39 (1H, dd, $J = 8.2, 4.8$ Hz), 7.64-7.67 (2H, m), 7.73-7.76 (1H, m), 8.56 (1H, d, $J = 2.4$ Hz), 8.66 (1H, dd, $J = 4.8, 1.6$ Hz).
 EI-MSm/z: 318 (M^+).

[0302]

4) The title compound

A solution of lithium hydroxide monohydrate (66.0 mg) in water (4.5 ml) was added to a suspension of the ethyl 5-(4-cyanophenyl)-1-(3-pyridyl)-1H-pyrazole-3-carboxylate (0.455 g) in tetrahydrofuran (9 ml) at room temperature, and the mixture was stirred for 80 minutes. To the reaction liquid were added 1N aqueous hydrochloric acid (1.65 ml) and a mixed solvent of chloroform and methanol (10:1), and the phases were separated, and the solvent of the organic layer was evaporated under reduced pressure to give the title compound (0.384 g, 93%) as a solid.

[0303]

$^1\text{H-NMR}$ (400 MHz, DMSO-d_6) δ : 7.27 (1H, m), 7.48-7.55 (3H, m), 7.82-7.87 (3H, m), 8.56 (1H, d, $J = 2.4$ Hz), 8.65-8.66 (1H, m), 13.18 (1H, br s).

[0316]

[Referential Example 26] 1-Amino-1-cyclopentanecarboxamide trifluoroacetate salt

[0317]

[Chem 36]

[0318]

Di-tert-butyl dicarbonate (12.0 g) and 6N aqueous sodium hydroxide (9 ml) were added to a solution of 1-amino-1-cyclopentanecarboxylic acid (6.45 g) in tetrahydrofuran (60 ml), and the mixture was stirred at room temperature for 20 hours. The reaction solution was acidified (weak acidic) with conc. hydrochloric acid, and dichloromethane was added to the solution, and the phases were separated. The organic layer was dried over anhydrous magnesium sulfate. After filtration, the solvent was evaporated under reduced pressure to give

1-tert-butoxycarbonylamino-1-cyclopentanecarboxylic acid.

(FAB-MSm/z: 230 (M+H)⁺.)

To a solution of the resulting carboxylic acid derivative in dichloromethane (100 ml) was added 1-hydroxybenzotriazole (10.2 g), 1-ethyl-3-(3-dimethylaminopropyl)carbodiimide hydrochloride (14.4 g), 28% aqueous ammonia (5 ml), and triethylamine (11 ml), and the mixture was stirred at room temperature for 16 hours. Water and dichloromethane were added to the reaction liquid and the phases were separated, and the organic layer was dried over anhydrous magnesium sulfate. After filtration, the solvent was evaporated under reduced pressure to give

1-tert-butoxycarbonylamino-1-cyclopentanecarboxamide (2.85 g, 25%).
(FAB-MSm/z: 229 (M+H)⁺.)

Trifluoroacetic acid (4 ml) was added to a solution of the resulting carboxamide derivative (2.85 g) in dichloromethane (20 ml), and the mixture was stirred for 4 hours. The reaction solvent was evaporated under reduced pressure to give the title compound (2.16 g, 71%).

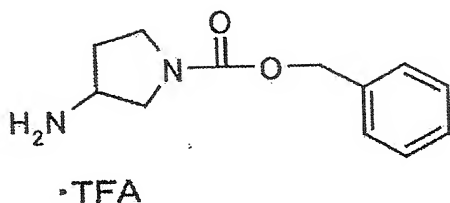

FAB-MSm/z: 129 (M+H)⁺.

[0319]

[Referential Example 27] 3-Aminopyrrolidine-1-carboxylic acid benzyl ester trifluoroacetate

[0320]

[Chem 37]

[0321]

- 1) 3-(N-tert-butoxycarbonyl)aminopyrrolidine-1-carboxylic acid benzyl ester

Benzyl chloroformate (1.43 ml) was added to a solution of pyrrolidine-3-carbamic acid tert-butyl ester (1.862 g) and triethylamine (1.39 ml) in dichloromethane (20 ml) under ice cooling, and the mixture was stirred at room temperature for 2 hours. The reaction solvent was evaporated under reduced pressure, and water and ethyl acetate were added to the residue, and the phases were separated. The organic layer was washed with 5% aqueous citric acid, water, and brine in this order, and dried over anhydrous sodium sulfate. After filtration, the solvent was evaporated under reduced pressure to give 3-(N-tert-butoxycarbonyl)aminopyrrolidine-1-carboxylic acid benzyl ester (2.676 g, 83%) as a solid.

[0322]

$^1\text{H-NMR}$ (400 MHz, CDCl_3) δ : 1.44 (9H, s), 1.74-1.89 (1H, br m), 2.07-2.19 (1H, br m), 3.19-3.31 (1H, br m), 3.42-3.53 (2H, br m), 3.62-3.70 (1H, m), 4.13-4.27 (1H, br), 4.52-4.66 (1H, br), 5.12 (2H, s), 7.25-7.41 (5H, m).

[0323]

- 2) The title compound

Anisole (2 ml) and trifluoroacetic acid (8 ml) were added to a solution of the 3-(N-tert-butoxycarbonyl)aminopyrrolidine-1-carboxylic acid benzyl ester (2.676 g) in dichloromethane (10 ml), and the mixture was stirred at room temperature for 1 hour. The reaction solvent was evaporated under reduced pressure to give the title compound (2.691 g, 96%) as a solid.

[0329]

[Referential Example 29] 5-(4-Hydroxymethyl-2-pyridyl)-1-(6-methoxy-3-pyridyl)-1H-pyrazole-3-carboxylic acid

[0330]

[Chem 39]

[0331]

1) 2-acetyl-4-methylpyridine

A 1.58M solution of n-butyllithium in hexane (22 ml) was added dropwise to a solution of 2-bromo-4-picoline (4 g) in diethylether (60 ml) over 5 minutes at -78°C , and the mixture was stirred for 5 minutes. N,N-dimethyl acetamide (3.3 ml) was added dropwise to the reaction liquid, and the mixture was stirred at room temperature for 14.5 hours. Water and ethyl acetate were added to the reaction liquid and the phases were separated, and the organic layer was dried over anhydrous magnesium sulfate. After filtration, the solvent was evaporated under reduced pressure, and the residue was purified by

column chromatography on silica gel (hexane-ethyl acetate) to give 2-acetyl-4-methylpyridine (1.86 g, 59%) as an oily product.

[0332]

$^1\text{H-NMR}$ (400 MHz, CDCl_3) δ : 2.42 (3H, s), 2.72 (3H, s), 7.29 (1H, dd, $J = 4.94, 0.67$ Hz), 7.86 (1H, d, $J = 0.67$ Hz), 8.54 (1H, d, $J = 4.94$ Hz).

[0333]

2) Ethyl 4-(4-methyl-2-pyridyl)-2,4-dioxobutanoate

The procedure of Referential Example 14(3) was repeated by using the 2-acetyl-4-methylpyridine (1.86 g) and diethyl oxalate (3.74 ml) to give ethyl 4-(4-methyl-2-pyridyl)-2,4-dioxobutanoate (3.82 g) as a solid.

[0334]

$^1\text{H-NMR}$ (400 MHz, CDCl_3) δ : 1.38 (3H, t, $J = 7.08$ Hz), 2.51 (3H, s), 4.36 (2H, q, $J = 7.08$ Hz), 7.43 (2H, br), 8.03 (1H, s), 8.65 (1H, d, $J = 5.01$ Hz).

3) Ethyl

5-(5-methyl-2-pyridyl)-1-(2-pyridyl)-1H-pyrazole-3-carboxylate

To a solution of the ethyl 4-(5-methyl-2-pyridyl)-2,4-dioxobutanoate (3.30 g) in ethanol (30 ml) were added 2-hydrazinopyridine (2.0 g) and conc. hydrochloric acid (2 ml), and the mixture was heated under reflux for 18 hours. After

cooling with air, chloroform and saturated sodium hydrogencarbonate solution were added to the reaction liquid and the phases were separated. The organic layer was dried over anhydrous magnesium sulfate. After filtration, the solvent was evaporated under reduced pressure, and the residue was purified by column chromatography on silica gel (methanol-chloroform) to give ethyl

5-(5-methyl-2-pyridyl)-1-(2-pyridyl)-1H-pyrazole-3-carboxylate (1.87 g).

[0377]

$^1\text{H-NMR}$ (400 MHz, CDCl_3) δ : 1.42 (3H, t, $J = 7.08$ Hz), 2.33 (3H, s), 4.45 (2H, q, $J = 7.08$ Hz), 7.20 (1H, s), 7.25 (1H, m), 7.33 (1H, d, $J = 7.93$ Hz), 7.52 (1H, d, $J = 7.93$ Hz), 7.76 (1H, d, $J = 8.05$ Hz), 7.85 (1H, dd, $J = 8.05, 1.84$ Hz), 8.28 (2H, s).

EI-MS m/z : 309 ($\text{M}+\text{H}$) $^+$.

[0378]

4) The title compound

Sodium ethoxide (830 mg) was added to a solution of the ethyl 5-(5-methyl-2-pyridyl)-1-(2-pyridyl)-1H-pyrazole-3-carboxylate (1.86 g) in ethanol (30 ml) at room temperature, and the mixture was stirred for 2 hours. Sodium ethoxide (700 mg) was then added to the solution, and the mixture was stirred for 30 minutes. Water and diethylether were added to the reaction liquid and the phases were separated, and the aqueous layer was acidified (to pH 4) with 1N aqueous hydrochloric acid, and the solution was extracted with chloroform. The organic layer was dried over anhydrous magnesium sulfate. After filtration, the solvent was evaporated under reduced pressure to give the title compound (1.17 g, 30% in two steps).

5-(5-Methyl-2-pyrazinyl)-1-(3-pyridyl)-1H-pyrazole-3-carboxylic acid

[0381]

[Chem 46]

[0382]

1) 5-Methylpyrazine-2-carboxylic acid N-methoxy-N-methylamide

Triethylamine (28.9 ml) was added to a solution of 5-methylpyrazine-2-carboxylic acid (13.0 g), N,O-dimethyl hydroxylamine hydrochloride (10.1 g), 1-(3-dimethylaminopropyl)-3-ethylcarbodiimide hydrochloride (19.8 g), and 1-hydroxybenzotriazole (14.0 g) in N,N-dimethylformamide (130 ml) at room temperature, and the mixture was stirred for 63 hours.

Water and ethyl acetate were added to the reaction liquid and the phases were separated, and the organic layer was dried over anhydrous sodium sulfate. After filtration, the solvent was evaporated under reduced pressure, and the residue was purified by column chromatography on silica gel (hexane-ethyl acetate) to give 5-methylpyrazine-2-carboxylic acid N-methoxy-N-methylamide (12.3 g, 72%) as an oily product.

[0383]

$^1\text{H-NMR}$ (400 MHz, CDCl_3) δ : 2.63 (3H, s), 3.41 (3H, s), 3.74 (3H, s), 8.46 (1H, s), 8.82 (1H, s).

[0426]

3) Ethyl

1-phenyl-5-(5-trifluoromethanesulfonyloxy-2-pyridyl)-1H-pyrazole-3-carboxylate

The procedure of Referential Example 39(3) was repeated by using the ethyl

5-(5-hydroxy-2-pyridyl)-1-phenyl-1H-pyrazole-3-carboxylate (1.98 g)

and trifluoromethanesulfonic anhydride (1.29 ml) to give ethyl 1-phenyl-5-(5-trifluoromethanesulfonyloxy-2-pyridyl)-1H-pyrazole-3-carboxylate (2.60 g, 92%) as an oily product.

[0427]

$^1\text{H-NMR}$ (400 MHz, CDCl_3) δ : 1.43 (3H, t, $J = 7.1$ Hz), 4.46 (2H, q, $J = 7.2$ Hz), 7.29-7.43 (7H, m), 7.57 (1H, dd, $J = 8.8, 2.7$ Hz), 8.51 (1H, d, $J = 2.7$ Hz).

[0428]

4) The title compound

The procedure of Referential Example 39(4) was repeated by using tri-*n*-butyl tin cyanide (7.42 g), tetrakis (triphenylphosphine)palladium(0) (10.17 g), and the ethyl 1-phenyl-5-(5-trifluoromethanesulfonyloxy-2-pyridyl)-1H-pyrazole-3-carboxylate (2.59 g) to give ethyl 5-(5-cyano-2-pyridyl)-1-phenyl-1H-pyrazole-3-carboxylate (2.708 g) as a solid. The procedure of Referential Example 39(4) was repeated by using this cyano derivative (2.68 g) and lithium hydroxide monohydrate (369 mg) to give the title compound (951 mg, 56%) as a solid. ESI-MS m/z : 291 ($\text{M}+\text{H}$) $^+$.

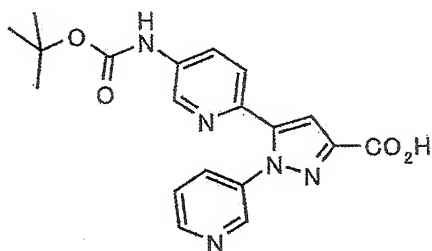

[0429]

[Referential Example 41]

5-[5-(tert-Butoxycarbonylamino)-2-pyridyl]-1-(3-pyridyl)-1H-pyrazole-3-carboxylic acid

[0430]

[Chem 51]

[0431]

1) 2-Acetyl-5-aminopyridine

Methyl magnesium bromide (0.93M solution in tetrahydrofuran, 200 ml) was added dropwise to a solution of 5-amino-2-cyanopyridine (10.13 g) in tetrahydrofuran (200 ml) under ice cooling and nitrogen atmosphere over 25 minutes, and the mixture was stirred at room temperature for 5 hours. Saturated aqueous ammonium chloride was added to the reaction liquid under ice cooling, and sulfuric acid (20 ml) was then added dropwise, and the mixture was stirred at room temperature for 80 minutes. A solution of sodium hydroxide (20 g) in water (100 ml) was added dropwise to the reaction liquid under ice cooling, and ethyl acetate was added to the solution and the phases were separated. The organic layer was washed with brine and dried over anhydrous sodium sulfate. After filtration, the solvent was evaporated under reduced pressure, and the residue was purified by column chromatography on silica gel (methanol-chloroform) to give 2-acetyl-5-aminopyridine (7.68 g, 66%) as a solid.

[0432]

$^1\text{H-NMR}$ (400 MHz, CDCl_3) δ : 2.64 (3H, s), 4.00-4.30 (2H, br), 6.98 (1H, dd, $J = 2.7, 8.5$ Hz), 7.91 (1H, dd, $J = 0.5, 8.5$ Hz), 8.06 (1H, dd, $J = 0.5, 2.7$ Hz).

ESI-MSm/z: 137 ($\text{M}+\text{H}$) $^+$.

[0433]

2) 2-Acetyl-5-(tert-butoxycarbonylamino)pyridine

A solution of di-tert-butoxy dicarbonate (11.10 g) in dichloromethane (30 ml) was added to a solution of 2-acetyl-5-aminopyridine (6.30 g) and 4-(dimethylamino)pyridine (5.65 g) in dichloromethane (150 ml) under ice cooling, and the mixture was stirred at room temperature for 1 hour. The solid precipitate was removed by filtration, and the solvent was evaporated under reduced pressure. The residue was purified by column chromatography on silica gel (methanol-chloroform) to give 2-acetyl-5-(tert-butoxycarbonylamino)pyridine (8.04 g, 73%) as a solid.

[0434]

$^1\text{H-NMR}$ (400 MHz, CDCl_3) δ : 1.54 (9H, s), 2.68 (3H, s), 6.74 (1H, br s), 8.03 (1H, d, $J = 8.5$ Hz), 8.11 (1H, dd, $J = 8.5, 2.4$ Hz), 8.46 (1H, dd, $J = 2.4, 0.5$ Hz).

ESI-MSm/z: 237 ($\text{M}+\text{H}$) $^+$.

[0435]

3) Ethyl

4-[5-(tert-butoxycarbonylamino)-2-pyridyl]-2,4-dioxobutanoate

Diethyl oxalate (9.2 ml) was added to a solution of sodium methoxide (4.63 g) in ethanol (340 ml). To the reaction liquid was added a solution of the 2-acetyl-5-(tert-butoxycarbonylamino)pyridine (8.04 g) in

ethanol (60 ml) at room temperature, and the mixture was stirred for 45 minutes and heated under reflux for 30 minutes. After cooling with air, the reaction solvent was evaporated under reduced pressure, and 5% aqueous citric acid and ethyl acetate were added to the residue and the phases were separated. The organic layer was washed with water and brine, and dried over anhydrous sodium sulfate. After filtration, the solvent was evaporated under reduced pressure, and the residue was purified by column chromatography on silica gel

(methanol-chloroform) to give ethyl

4-[5-(tert-butoxycarbonylamino)-2-pyridyl]-2,4-dioxobutanoate (1.70 g, 14.8%) as a solid.

[0436]

¹H-NMR (400 MHz, CDCl₃)δ: 1.41 (3H, t, J = 7.1 Hz), 1.55 (9H, s), 4.40 (2H, q, J = 7.1 Hz), 6.78 (1H, br s), 7.59 (1H, s), 8.14 (1H, d, J = 8.8 Hz), 8.19 (1H, dd, J = 8.8, 2.4 Hz), 8.51 (1H, d, J = 2.4 Hz). ESI-MSm/z: 337 (M+H)⁺.

[0437]

4) Ethyl

5-[5-(tert-butoxycarbonylamino)-2-pyridyl]-4,5-dihydro-5-hydroxy-1-(3-pyridyl)-1H-pyrazole-3-carboxylate

A solution of the ethyl

4-[5-(tert-butoxycarbonylamino)-2-pyridyl]-2,4-dioxobutanoate (1.59 g) and the 3-hydrazinopyridine (0.52 g) of Referential Example 32 in ethanol (100 ml) was heated under reflux for 17 hours. After cooling with air, the reaction solvent was evaporated under reduced pressure, and the residue was purified by column chromatography on silica gel (methanol-chloroform) to give ethyl

5-[5-(tert-butoxycarbonylamino)-2-pyridyl]-4,5-dihydro-5-hydroxy-1-(3-pyridyl)-1H-pyrazole-3-carboxylate (1.382 g, 68%) as an amorphous product.

[0438]

$^1\text{H-NMR}$ (400 MHz, CDCl_3) δ : 1.40 (3H, t, $J = 7.1$ Hz), 1.53 (9H, s), 3.47 (1H, d, $J = 19.0$ Hz), 3.63 (1H, d, $J = 19.0$ Hz), 4.39 (2H, q, $J = 7.1$ Hz), 6.71 (1H, br s), 6.78 (1H, s), 7.06 (1H, ddd, $J = 8.3, 4.6, 0.7$ Hz), 7.35 (1H, d, $J = 8.8$ Hz), 7.46 (1H, ddd, $J = 8.3, 2.7, 1.5$ Hz), 7.98-8.03 (1H, m), 8.14 (1H, dd, $J = 4.6, 1.5$ Hz), 8.19 (1H, dd, $J = 2.7, 0.7$ Hz), 8.49 (1H, dd, $J = 2.7, 0.5$ Hz).

[0439]

5) Ethyl

5-[5-(tert-butoxycarbonylamino)-2-pyridyl]-1-(3-pyridyl)-1H-pyrazole-3-carboxylate

Triethylamine (1.96 ml) and methanesulfonyl chloride (327 μl) were added to a solution of the ethyl 5-[5-(tert-butoxycarbonylamino)-2-pyridyl]-4,5-dihydro-5-hydroxy-1-(3-pyridyl)-1H-pyrazole-3-carboxylate (1.205 g) and 4-(dimethylamino)pyridine (344 mg) in N,N -dimethylformamide (30 ml) at room temperature, and the mixture was stirred for 4 hours. The reaction solvent was evaporated under reduced pressure, and water and ethyl acetate were added to the residue and the phases were separated. The organic layer was washed with water and brine, and dried over anhydrous sodium sulfate. After filtration, the solvent was evaporated under reduced pressure, and the residue was purified by column chromatography on silica gel (hexane-ethyl acetate), and then by thin

layer chromatography on silica gel (hexane-ethyl acetate) to give ethyl 5-[5-(tert-butoxycarbonylamino)-2-pyridyl]-1-(3-pyridyl)-1H-pyrazole-3-carboxylate (506 mg, 43%) as a solid.

[0440]

$^1\text{H-NMR}$ (400 MHz, CDCl_3) δ : 1.43 (3H, t, $J = 7.1$ Hz), 1.52 (9H, s), 4.46 (2H, q, $J = 7.1$ Hz), 6.59 (1H, br s), 7.23 (1H, s), 7.36 (2H, ddd, $J = 8.1, 4.6, 0.7$ Hz), 7.38 (2H, d, $J = 8.1$ Hz), 7.81 (1H, ddd, $J = 8.1, 2.4, 1.5$ Hz), 8.02-8.08 (1H, br m), 8.26 (1H, d, $J = 2.7$ Hz), 8.53 (1H, d, $J = 2.4$ Hz), 8.59 (1H, dd, $J = 4.9, 1.5$ Hz).

ESI-MSm/z: 410 ($\text{M}+\text{H}$) $^+$.

[0441]

6) The title compound

1N aqueous sodium hydroxide (3.7 ml) was added to a suspension of the ethyl

5-[5-(tert-butoxycarbonylamino)-2-pyridyl]-1-(3-pyridyl)-1H-pyrazole-3-carboxylate (505 mg) in ethanol (20 ml) at room temperature, and the mixture was heated under reflux for 10 minutes. After cooling with air, the solvent was evaporated under reduced pressure, and water and ethyl acetate were added to the residue and the aqueous layer was separated. The aqueous layer was acidified with 5% aqueous citric acid, and the solid precipitate was collected by filtration to give the title compound (357 mg, 75.8%) as a solid.

[0442]

$^1\text{H-NMR}$ (400 MHz, DMSO-d_6) δ : 1.48 (9H, s), 7.27 (1H, s), 7.50 (1H, dd, $J = 8.1, 4.9$ Hz), 7.65 (1H, d, $J = 8.5$ Hz), 7.79 (1H, ddd, $J = 8.1, 2.4, 1.5$ Hz), 7.96 (1H, dd, $J = 8.8, 2.4$ Hz), 8.41 (1H, d, $J = 2.4$

Hz), 8.50 (1H, d, $J = 2.4$ Hz), 8.60 (1H, dd, $J = 4.9, 1.2$ Hz), 9.71 (1H, s).

[0494]

1) 5-methoxypyridine-2-carboxylic acid N-methoxy-N-methylamide

Under argon atmosphere, a solution of 5-hydroxy-2-methylpyridine (30.0 g) in dimethyl sulfoxide (200 ml) was added dropwise to a suspension of sodium hydride (55% in oil, 12.6 g) in dimethyl sulfoxide (100 ml) over 20 minutes at 0°C, and the mixture was stirred for 35 minutes. At the same temperature, methyl iodide (18.0 ml) was added to the reaction liquid over 15 minutes, and the mixture was stirred at room temperature for 2 hours. Water and diethylether were added to the reaction liquid and the phases were separated, and the organic layer was dried over anhydrous sodium sulfate. After filtration, the solvent was evaporated

under reduced pressure to give 5-methoxy-2-methylpyridine (18.7 g). To a solution of this crude product (18.7 g) in pyridine (187 ml) was added selenium dioxide (33.7 g), and the mixture was heated under reflux for 62 hours. After cooling with air, water and chloroform were added to the reaction liquid and the phases were separated. The organic layer was dried over anhydrous sodium sulfate. After filtration, the solvent was evaporated under reduced pressure to give 5-methoxypyridine-2-carboxylic acid (19.1 g). To a suspension of the thus obtained crude product (19.1 g), N,O-dimethylhydroxyamine hydrochloride (16.3 g), and 3-(3-dimethylaminopropyl)-1-ethyl-carbodiimide hydrochloride (32.1 g), and 1-hydroxybenzotriazole (22.6 g) in dichloromethane (250 ml) was added triethylamine (46.6 ml) at 0°C, and the mixture was stirred for 30 minutes, and the mixture was further stirred at room temperature for 14 hours. Water and chloroform were added to the reaction liquid and the phases were separated, and the organic layer was dried over anhydrous sodium sulfate. After filtration, the solvent was evaporated under reduced pressure, and the residue was purified by column chromatography on silica gel (ethyl acetate-chloroform) to give 5-methoxypyridine-2-carboxylic acid N-methoxy-N-methylamide (15.3 g, 51%) as an oily product.

[0495]

¹H-NMR (400 MHz, CDCl₃)δ: 3.44 (3H, s), 3.79-3.84 (3H, m), 3.91 (3H, s), 7.24-7.28 (1H, m), 7.75 (1H, d, J = 8.5 Hz), 8.30 (1H, d, J = 2.9 Hz).

[0514]

2) The title compound

Sodium methoxide (1.60 g) was added to a suspension of the methyl 1-(6-chloro-3-pyridazinyl)-5-(2-pyrazinyl)-1H-pyrazole-3-carboxylate (6.25 g) in methanol (50 ml) and tetrahydrofuran (100 ml) at room temperature, and the mixture was stirred for 8 hours. 1N aqueous sodium hydroxide (40.0 ml) was added to the reaction liquid, and the mixture was stirred for 19 hours. Diethylether and water were added to the reaction liquid and the aqueous layer was separated, and the aqueous layer was acidified with hydrochloric acid, and the solution was extracted with diethylether. The aqueous layer was extracted with ethyl acetate, and the combined organic layers were dried over anhydrous sodium sulfate. After filtration, the solvent was evaporated under reduced pressure. Methanol and diethylether were added to the residue, and the resulting solid was collected to give the title compound (4.37 g, 74%) as a solid.

[0515]

¹H-NMR (400 MHz, DMSO-d₆) δ: 4.04 (3H, s), 7.51 (1H, d, J = 9.3 Hz), 7.55 (1H, s), 8.06 (1H, d, J = 9.3 Hz), 8.49 (1H, dd, J = 2.4, 1.5 Hz), 8.62 (1H, d, J = 2.4 Hz), 9.07 (1H, d, J = 1.5 Hz).

1) Ethyl

5-(5-amino-2-pyridyl)-1-(3-pyridyl)-1H-pyrazole-3-carboxylate

Conc. hydrochloric acid (0.59 ml) was added to a solution of the ethyl

5-[5-(tert-butoxycarbonylamino)-2-pyridyl]-4,5-dihydro-5-hydroxy-1-(3-pyridyl)-1H-pyrazole-3-carboxylate (1.205 g) of Referential Example 41(4) in ethanol (30 ml), and the mixture was heated under reflux for 14 hours. The reaction solvent was evaporated under reduced pressure, and saturated aqueous sodium bicarbonate and ethyl acetate were added to the residue and the phases were separated. The organic layer was dried over anhydrous sodium sulfate. After filtration, the solvent was evaporated under reduced pressure, and the residue was purified by column chromatography on silica gel (methanol-chloroform) to give ethyl

5-(5-amino-2-pyridyl)-1-(3-pyridyl)-1H-pyrazole-3-carboxylate (609 mg, 69%) as an oily product.

[0519]

¹H-NMR (400 MHz, CDCl₃)δ: 1.42 (3H, t, J = 7.1 Hz), 3.85 (2H, br s), 4.45 (2H, q, J = 7.1 Hz), 6.95 (1H, dd, J = 8.5, 2.9 Hz), 7.15 (1H, s), 7.20 (1H, d, J = 8.5 Hz), 7.35 (1H, ddd, J = 8.3, 4.9, 0.7 Hz),

[0520]

2) Ethyl

5-(5-fluoro-2-pyridyl)-1-(3-pyridyl)-1H-pyrazole-3-carboxylate

To a solution of the ethyl

5-(5-amino-2-pyridyl)-1-(3-pyridyl)-1H-pyrazole-3-carboxylate (604 mg) in ethanol (30 ml) was added 42% tetrafluoroboric acid (15 ml), and ethyl nitrite (15% ethanol solution, 3.9 ml) was added to the reaction liquid at 0°C, and the mixture was stirred for 20 minutes. Diethylether (200 ml) was added to the reaction liquid, and diethylether was removed by decantation. To the resulting viscous oily product was added toluene (50 ml), and the mixture was heated under reflux for 1 hour. After cooling with air, the reaction solvent was evaporated under reduced pressure, and saturated aqueous sodium bicarbonate and ethyl acetate were added to the residue and the phases were separated. The organic layer was dried over anhydrous sodium sulfate. After filtration, the solvent was evaporated under reduced pressure, and the residue was purified by thin layer chromatography on silica gel (hexane-ethyl acetate) to give ethyl

5-(5-fluoro-2-pyridyl)-1-(3-pyridyl)-1H-pyrazole-3-carboxylate
(282 mg, 46%) as a solid.

[0548]

[Referential Example 55]

5-(6-Methoxy-3-pyridyl)-1-(3-pyridyl)-1H-pyrazole-3-carboxylic acid

[0549]

[Chem 65]

[0550]

1) 3-Acetyl-6-methoxypyridine

To a solution of methyl 6-methoxynicotinate (20.07 g) in methanol (200 ml) was added 1N aqueous sodium hydroxide (140 ml) at room temperature, and the mixture was stirred for 16 hours. The solvent was evaporated under reduced pressure, and the residue was acidified (to pH 4) by adding 1N aqueous hydrochloric acid. The solid precipitate was collected by filtration to give 6-methoxynicotinic acid (15.12 g, 82%) (ESI-MSm/z : 154 ($\text{M}+\text{H}$) $^+$). To a solution of the thus obtained 6-methoxynicotinic acid (15.0 g) in dichloromethane (600 ml) were added N,O-dimethyl hydroxylamine hydrochloride (11.5 g),

1-(3-dimethylaminopropyl)-3-ethylcarbodiimide hydrochloride (41.0 g), 1-hydroxybenzotriazole (14.5 g), and triethylamine (54 ml) at room temperature, and the mixture was stirred for 16 hours. Water and dichloromethane were added to the reaction liquid and the phases were separated, and the aqueous layer was extracted with dichloromethane. The combined organic layers were washed with brine, and dried over anhydrous sodium sulfate. After filtration, the solvent was evaporated under reduced pressure, and the residue was purified by column chromatography on silica gel (acetone-chloroform) to give 6-methoxynicotinic acid N-methoxy-N-methylamide (19.2 g, measured) as an oily product (ESI-MSm/z: 197 (M+H)⁺). Methyl lithium (0.98M solution in diethylether, 135 ml) was added dropwise to a solution of this 6-methoxynicotinic acid N-methoxy-N-methylamide (19.21 g) in tetrahydrofuran (400 ml) over 30 minutes at -78°C, the mixture was stirred for another 30 minutes. Saturated aqueous ammonium chloride, water, and ethyl acetate were added to the reaction liquid and the phases were separated, and the aqueous layer was further extracted with ethyl acetate. The combined organic layers were washed with brine, and dried over anhydrous sodium sulfate. After filtration, the solvent was evaporated under reduced pressure, and diethylether was added to the residue. The solid precipitate was collected by filtration to give the title compound (10.86 g, 73%).

[0551]

¹H-NMR (400 MHz, CDCl₃)δ: 2.57 (3H, s), 4.01 (3H, s), 6.79 (1H, d, J = 8.8 Hz), 8.14 (1H, dd, J = 2.5, 8.8 Hz), 8.78 (1H, d, J = 2.5 Hz). ESI-MSm/z: 152 (M+H)⁺.

[0552]

2) Methyl 4-(6-methoxy-3-pyridyl)-2,4-dioxobutanoate

[Method A]

Sodium methoxide (0.229 g) was added to a solution of the 3-acetyl-6-methoxypyridine (0.309 g) and dimethyl oxalate (0.484 g) in methanol (15 ml) at room temperature, and the mixture was stirred for 1.5 hours. The mixture was stirred at 45°C for another 20 hours. After cooling with air, the solid precipitate was collected by filtration, washed with diethylether, and after the solid was dissolved in chloroform and water, the solution was acidified by 1N aqueous hydrochloric acid and the phases were separated. The aqueous layer was extracted with chloroform, and the combined organic layers were washed with brine, and dried over anhydrous sodium sulfate. After filtration, the solvent was evaporated under reduced pressure to give methyl 4-(6-methoxy-3-pyridyl)-2,4-dioxobutanoate (0.294 g, 61%) as a solid.

[0553]

$^1\text{H-NMR}$ (400 MHz, CDCl_3) δ : 3.94 (3H, s), 4.03 (3H, s), 6.83 (1H, d like, $J = 8.8$ Hz), 7.00 (1H, s), 8.15 (1H, dd, $J = 8.8, 2.5$ Hz), 8.84 (1H, d, $J = 2.5$ Hz).

ESI-MS m/z : 238 ($\text{M}+\text{H}$) $^+$.

[Method B]

Sodium hydride (55%, 0.185 g) was added to a solution of the 3-acetyl-6-methoxypyridine (0.321 g) in N,N -dimethylformamide (6.0 ml) at 0°C, and the mixture was stirred for 25 minutes. Dimethyl oxalate (0.498 g) was added to the reaction liquid at 0°C, and the mixture was stirred at room temperature for 1 hour. Water and diethylether were added to the reaction liquid and the aqueous layer was separated, and the aqueous layer was acidified (to pH 4) with 1N aqueous hydrochloric

acid, and the solution was extracted with ethyl acetate. The aqueous layer was further extracted with ethyl acetate, and the combined organic layers were washed with brine, and dried over anhydrous sodium sulfate. After filtration, the solvent was evaporated under reduced pressure to give methyl 4-(6-methoxy-3-pyridyl)-2,4-dioxobutanoate (0.504 g, measured) as a solid.

[0554]

3) Methyl

5-(6-methoxy-3-pyridyl)-1-(3-pyridyl)-1H-pyrazole-3-carboxylate

The 3-hydrazinopyridine (3.45 g) of Referential Example 32 was added to a solution of the methyl 4-(6-methoxy-3-pyridyl)-2,4-dioxobutanoate (6.80 g) in methanol (120 ml) at room temperature, and the mixture was heated under reflux for 30 minutes. After cooling with air, acetic acid (6.5 ml) was added and the mixture was heated under reflux for 14 hours. After cooling with air, the solvent of the reaction liquid was evaporated under reduced pressure. Water and chloroform were added to the residue, and the mixture was neutralized with 1N aqueous sodium hydroxide and the phases were separated. The aqueous layer was extracted with chloroform, and the combined organic layers were washed with brine, and dried over anhydrous sodium sulfate. After filtration, the solvent was evaporated under reduced pressure, and the residue was purified by column chromatography on silica gel (acetone-chloroform) to give methyl 5-(6-methoxy-3-pyridyl)-1-(3-pyridyl)-1H-pyrazole-3-carboxylate (4.53 g, 51%) as an oily product.

[0555]

$^1\text{H-NMR}$ (400 MHz, CDCl_3) δ : 3.99 (3H, s), 4.03 (3H, s), 6.71 (1H, d, J = 8.5 Hz), 7.06 (1H, s), 7.32-7.35 (2H, m), 7.72-7.80 (1H, m), 8.09 (1H, d, J = 8.5 Hz), 8.58 (1H, d, J = 2.4 Hz), 8.62 (1H, dd, J = 2.4, 4.8 Hz).

FAB-MSm/z: 311 ($\text{M}+\text{H}$) $^+$.

[0556]

4) The title compound

Lithium hydroxide monohydrate (0.730 g) was added to a solution of the methyl 5-(6-methoxy-3-pyridyl)-1-(3-pyridyl)-1H-pyrazole-3-carboxylate (4.89 g) in tetrahydrofuran (30 ml), methanol (15 ml), and water (30 ml) at room temperature, and the mixture was stirred for 1.5 hours. The reaction solvent was evaporated under reduced pressure, and the residue was acidified (to pH 6 to 5) with 1N aqueous hydrochloric acid. The solid precipitate was collected by filtration to give the title compound (3.278 g, 70%).

[0557]

$^1\text{H-NMR}$ (400 MHz, DMSO-d_6) δ : 3.86 (3H, s), 6.83 (1H, d, J = 8.8 Hz), 7.16 (1H, s), 7.52-7.60 (2H, m), 7.83-7.91 (1H, m), 8.17 (1H, d, J = 2.4 Hz), 8.58 (1H, d, J = 2.4 Hz), 8.64 (1H, dd, J = 4.9, 1.5 Hz).
ESI-MSm/z: 297 ($\text{M}+\text{H}$) $^+$.

[Referential Example 60]

1-(6-Methoxy-3-pyridyl)-5-(1H-pyrazole-3-yl)-1H-pyrazole-3-carboxylic acid

[0585]

[Chem 70]

[0586]

1) 1-{1-[(4-Methylphenyl)sulfonyl]-1H-pyrazol-3-yl}-1-ethanone

To a solution of 1-(1H-pyrazol-5-yl)-1-ethanone hydrochloride (2.93 g) in pyridine (60 ml) was added 4-methylbenzenesulfonyl chloride (5.72 g), and the mixture was heated under reflux for 3.5 hours. After cooling with air, the reaction solvent was evaporated under reduced pressure, and ethyl acetate and water were added to the residue and the phases were separated. The organic layer was washed with 1N aqueous hydrochloric acid, and dried over anhydrous sodium sulfate. After filtration, the solvent was evaporated under reduced pressure, and the residue was solidified from methanol, diethylether, and hexane

to give 1-{1-[(4-methylphenyl)sulfonyl]-1H-pyrazol-3-yl}-1-ethanone (1.89 g, 35%). The filtrate solvent was evaporated under reduced pressure, and the residue was solidified from methanol, diethylether, and hexane to give 1-{1-[(4-methylphenyl)sulfonyl]-1H-pyrazol-3-yl}-1-ethanone (2.09 g, 39%).

[0587]

$^1\text{H-NMR}$ (400 MHz, CDCl_3) δ : 2.45 (3H, s), 2.57 (3H, s), 6.83 (1H, d, J = 2.7 Hz), 7.36-7.38 (2H, m), 7.92-7.96 (2H, m), 8.10 (1H, d, J = 2.9 Hz).

ESI-MSm/z: 265 ($\text{M}+\text{H}$) $^+$.

[0588]

2) Ethyl

1-(6-methoxy-3-pyridyl)-5-{1-[(4-methylphenyl)sulfonyl]-1H-pyrazol-3-yl}-1H-pyrazole-3-carboxylate

Lithium bis(trimethylsilyl)amide (1.0M solution in tetrahydrofuran, 16.5 ml) was added to a suspension of the 1-{1-[(4-methylphenyl)sulfonyl]-1H-pyrazol-3-yl}-1-ethanone (3.97 g) in tetrahydrofuran (15 ml) over 35 minutes at -78°C , and diethyl oxalate (3.05 ml) was added to the reaction liquid. The mixture was stirred for 15 minutes, and stirring was continued for another 3.5 hours while resuming the room temperature. Diethylether and water were added to the reaction liquid and the aqueous layer was separated, and the aqueous layer was acidified by adding 1N aqueous hydrochloric acid and the solution was extracted with diethylether. The aqueous layer was further extracted with ethyl acetate, and the combined organic layers were dried over anhydrous sodium sulfate. After filtration,

the solvent was evaporated under reduced pressure, and dichloromethane was added to the residue. The resulting solid was removed by filtration, and the solvent was evaporated under reduced pressure to give ethyl 4-{1-[(4-methylphenyl)sulfonyl]-1H-pyrazol-3-yl}-2,4-dioxobutanoate (5.08 g, 92%) as an oily product. A solution of this ethyl butanoate derivative (5.08 g) and the 5-hydrazino-2-methoxypyridine (1.93 g) of Referential Example 2 in ethanol (70 ml) was heated under reflux for 14.5 hours. After cooling with air, ethyl acetate and saturated aqueous sodium bicarbonate were added to the reaction liquid and the phases were separated, and the organic layer was dried over anhydrous sodium sulfate. After filtration, the solvent was evaporated under reduced pressure, and the residue was purified by column chromatography on silica gel (ethyl acetate-hexane) to give ethyl 1-(6-methoxy-3-pyridyl)-5-{1-[(4-methylphenyl)sulfonyl]-1H-pyrazol-3-yl}-1H-pyrazole-3-carboxylate (2.58 g, 39%) as an amorphous product.

[0589]

¹H-NMR (400 MHz, CDCl₃) δ : 1.41 (3H, t, J = 7.1 Hz), 2.45 (3H, s), 4.01 (3H, s), 4.44 (2H, q, J = 7.1 Hz), 6.24 (1H, d, J = 2.7 Hz), 6.73 (1H, d, J = 8.8 Hz), 7.23 (1H, s), 7.31 (2H, d, J = 8.5 Hz), 7.58 (1H, dd, J = 8.8, 2.7 Hz), 7.76 (2H, d, J = 8.3 Hz), 8.04 (1H, d, J = 2.7 Hz), 8.15 (1H, d, J = 2.7 Hz).

ESI-MSm/z: 468 (M+H)⁺.

[0590]

3) The title compound

The procedure of Referential Example 48(2) was repeated by using the ethyl

1-(6-methoxy-3-pyridyl)-5-{1-[(4-methylphenyl)sulfonyl]-1H-pyrazol-3-yl}-1H-pyrazole-3-carboxylate (2.58 g) to give the title compound (1.33 g, 84%) as a solid.

[0591]

[0596]

2) Methyl 4-(6-methyl-3-pyridazinyl)-2,4-dioxobutanoate

Lithium bis(trimethylsilyl)amide (1.0M solution in tetrahydrofuran, 33 ml) was added to a solution of the 3-acetyl-6-methylpyridazine (4.03 g) in tetrahydrofuran (100 ml) at -78°C , and the mixture was stirred for 1 hour. A solution of dimethyl oxalate (7.0 g) in tetrahydrofuran (30 ml) was added to the reaction liquid at -78°C , and the mixture was stirred at 0°C for 2 hours. Water and diethylether were added to the reaction liquid and the aqueous layer was separated, and the aqueous layer was acidified (to pH 4) with 1N aqueous hydrochloric acid and the solution was extracted with chloroform. The aqueous layer was further extracted with chloroform, and the combined organic layers were washed with brine, and dried over anhydrous sodium sulfate. After filtration, the solvent was evaporated under reduced pressure to give methyl

4-(6-methyl-3-pyridazinyl)-2,4-dioxobutanoate (5.42 g, 82%) as a solid.

[0597]

$^1\text{H-NMR}$ (400 MHz, CDCl_3) δ : 2.78 (3H, s), 3.89 (3H, s), 7.47 (1H, d, J = 8.5 Hz), 7.84 (1H, s), 8.07 (1H, d, J = 8.5 Hz).

ESI-MS m/z : 223 ($\text{M}+\text{H}$) $^+$.

[0598]

3) Methyl

5-(6-methyl-3-pyridazinyl)-1-(3-pyridyl)-1H-pyrazole-3-carboxylate

The 3-hydrazinopyridine (3.00 g) of Referential Example 32 was added to a solution of the methyl 4-(6-methyl-3-pyridazinyl)-2,4-dioxobutanoate (5.42 g) in methanol (140 ml) at room temperature, and the mixture was heated under reflux for 30 minutes. After cooling with air, acetic acid (5.6 ml) was added and the mixture was heated under reflux for 14 hours. Conc. hydrochloric acid (1.2 ml) was then added and the mixture was heated under reflux for 24 hours. After cooling with air, pH of the reaction liquid was adjusted to 4 by adding 1N aqueous sodium hydroxide, and the reaction solvent was evaporated under reduced pressure. Chloroform and water were added to the residue and the phases were separated, and the aqueous layer was further extracted with chloroform. The combined organic layers were washed with brine, and dried over anhydrous sodium sulfate. After filtration, the solvent was evaporated under reduced pressure, and the residue was purified by column chromatography on silica gel (methanol-chloroform) to give methyl 5-(6-methyl-3-pyridazinyl)-1-(3-pyridyl)-1H-pyrazole-3-carboxylate

e (2.98 g, 41%) as a solid.

[0599]

^1H -NMR (400 MHz, CDCl_3) δ : 2.73 (3H, s), 4.00 (3H, s), 7.32-7.43 (3H, m), 7.46 (1H, d, $J = 8.7$ Hz), 7.86-7.92 (1H, m), 8.53 (1H, d like, $J = 2.5$ Hz), 8.62 (1H, dd, $J = 4.9, 1.5$ Hz).

[0612]

1) Ethyl

1-(6-methyl-3-pyridazinyl)-5-(5-methyl-2-pyridyl)-1H-pyrazole-3-carboxylate

Acetic acid (4.31 ml) was added to a solution of the ethyl 4-(5-methyl-2-pyridyl)-2,4-dioxobutanoate (3.54 g) of Referential Example 35(2) and the 3-hydrazino-6-methylpyridazine (1.87 g) of

Referential Example 63 in ethanol (71 ml) at room temperature, and the mixture was heated under reflux for 15 hours. To the reaction liquid was added conc. hydrochloric acid (4.7 ml), and the mixture was heated under reflux for 3 hours. After cooling with air, saturated aqueous sodium bicarbonate and chloroform were added to the reaction liquid and the phases were separated, and the organic layer was dried over anhydrous sodium sulfate. After filtration, the solvent was evaporated under reduced pressure, and the residue was purified by column chromatography on silica gel (chloroform-ethyl acetate) to give ethyl

1-(6-methyl-3-pyridazinyl)-5-(5-methyl-2-pyridyl)-1H-pyrazole-3-carboxylate (1.13 g, 23%) as a solid.

[0613]

[0617]

[Chem 75]

[0618]

1) 3-Methoxypyridazine

In hydrogen atmosphere, 10% palladium on carbon (wet., 3.12 g) was added to a solution of 3-chloro-6-methoxypyridazine (30.0 g) in methanol (200 ml) at room temperature, the mixture was stirred for 17 hours. After filtration of the reaction liquid, the solvent in the filtrate was evaporated under reduced pressure, and the residue was purified by column chromatography on silica gel (ethyl acetate) to give 3-methoxypyridazine (16.3 g, 71%) as an oily product.

[0619]

$^1\text{H-NMR}$ (400 MHz, CDCl_3) δ : 4.14 (3H, s), 6.98 (1H, d, $J = 9.0$ Hz), 7.37 (1H, dd, $J = 4.5, 4.4$ Hz), 8.84 (1H, d, $J = 4.4$ Hz).

[0620]

2) 3-Methoxypyridazine-1-oxide

To a solution of the 3-methoxypyridazine (16.2 g) in dichloromethane (300 ml) was added m-chlorobenzoic acid (44.0 g) at room temperature, and the mixture was stirred for 16 hours. A solution of sodium bicarbonate (9.27 g) in water (100 ml) was added to the reaction liquid, and the mixture was stirred for 15 minutes. Saturated aqueous sodium bicarbonate and chloroform were then added to the mixture, and the phases were separated, and the organic layer was dried over anhydrous sodium sulfate. After filtration, the solvent was evaporated under reduced pressure to give 3-methoxypyridazine-1-oxide (15.8 g, 85%) as a solid.

[0621]

$^1\text{H-NMR}$ (400 MHz, CDCl_3) δ : 4.02 (3H, s), 6.66 (1H, d, $J = 8.5$ Hz), 7.48 (1H, dd, $J = 8.5, 5.9$ Hz), 7.92 (1H, d, $J = 5.9$ Hz).

[0622]

3) 6-Cyano-3-methoxypyridazine

A mixture of 3-methoxypyridazine-1-oxide (9.89 g) and dimethyl sulfate (9.45 ml) was stirred at 80°C for 1 hour. After cooling with air, 1,4-dioxane (100 ml) was added to the reaction liquid, and a solution of potassium cyanate (8.77 g) in water (30 ml) was added at 0°C, and the mixture was stirred at room temperature for 4.5 hours. The reaction liquid was poured into saturated aqueous sodium bicarbonate, and the mixture was extracted with chloroform, and the organic layer was washed with water, then dried over anhydrous sodium sulfate. After filtration,

the solvent was evaporated under reduced pressure, and the residue was purified by column chromatography on silica gel (hexane-ethyl acetate) to give 6-cyano-3-methoxypyridazine (8.74 g, 72%) as a solid.

[0623]

$^1\text{H-NMR}$ (400 MHz, CDCl_3) δ : 4.24 (3H, s), 7.09 (1H, d, $J = 9.0$ Hz), 7.68 (1H, d, $J = 9.0$ Hz).

[0624]

4) 3-Acetyl-6-methoxypyridazine

Methyl magnesium iodide (0.84M solution in diethylether, 60 ml) was gradually added dropwise to a solution of the 6-cyano-3-methoxypyridazine (5.61 g) in a mixture of diethylether (100 ml) and benzene (20 ml) at -10°C , and the mixture was stirred at the same temperature for 1 hour. The reaction liquid was acidified (to pH 4) by adding 1N aqueous hydrochloric acid at 0°C and the aqueous layer was separated. The aqueous layer was made weakly basic (pH 9) by adding saturated aqueous sodium bicarbonate, and the solution was extracted with dichloromethane. The aqueous layer was extracted with dichloromethane, and the combined organic layers were washed with brine, and dried over anhydrous sodium sulfate. After filtration, the solvent was evaporated under reduced pressure, and the residue was purified by column chromatography on silica gel (ethyl acetate-hexane) to give 3-acetyl-6-methoxypyridazine (3.82 g, 61%) as a solid.

[0625]

$^1\text{H-NMR}$ (400 MHz, CDCl_3) δ : 2.82 (3H, s), 4.23 (3H, s), 7.06 (1H, d, $J = 9.3$ Hz), 8.04 (1H, d, $J = 9.3$ Hz).

FAB-MSm/z: 153 ($\text{M}+\text{H}$) $^+$.

[0626]

5) Methyl 4-(6-methoxy-3-pyridazinyl)-2,4-dioxobutanoate

Lithium bis(trimethylsilyl)amide (1.0M solution in tetrahydrofuran, 27 ml) was added to a solution of the 3-acetyl-6-methoxypyridazine (3.82 g) in tetrahydrofuran (100 ml) at -78°C, and the mixture was stirred for 1 hour. A solution of dimethyl oxalate (5.9 g) in tetrahydrofuran (20 ml) was added to the reaction liquid at -78°C, and the mixture was stirred at 0°C for 2 hours. Water and diethylether were added to the reaction liquid and the aqueous layer was separated, and the aqueous layer was acidified (to pH 4) with 1N aqueous hydrochloric acid, and the solution was extracted with chloroform. The aqueous layer was further extracted with chloroform, and the combined organic layers were washed with brine, and dried over anhydrous sodium sulfate. After filtration, the solvent was evaporated under reduced pressure to give methyl 4-(6-methoxy-3-pyridazinyl)-2,4-dioxobutanoate (5.38 g, 90%) as a solid.

[0627]

¹H-NMR (400 MHz, CDCl₃) δ: 3.93 (3H, s), 4.26 (3H, s), 7.12 (1H, d, J = 9.3 Hz), 7.86 (1H, s), 8.15 (1H, d, J = 9.3 Hz).

ESI-MSm/z: 239 (M+H)⁺.

[0628]

6) Methyl

5-(6-methoxy-3-pyridazinyl)-1-(3-pyridyl)-1H-pyrazole-3-carboxylate

The 3-hydrazinopyridine (2.82 g) of Referential Example 32 was added to a solution of the methyl 4-(6-methoxypyridazin-3-yl)-2,4-dioxobutanoate (5.38 g) in methanol

(150 ml) at room temperature, and the mixture was heated under reflux for 45 minutes. Acetic acid (5.2 ml) was added to the reaction liquid, and the mixture was heated under reflux for 14 hours. After cooling with air, the reaction liquid was neutralized with 1N aqueous sodium hydroxide, and the solvent was evaporated under reduced pressure. Chloroform and water were added to the residue and the phases were separated, and the aqueous layer was extracted with chloroform. The combined organic layers were brine, and dried over anhydrous sodium sulfate. After filtration, the solvent was evaporated under reduced pressure, and the residue was purified by column chromatography on silica gel (methanol-chloroform) to give methyl 5-(6-methoxy-3-pyridazinyl)-1-(3-pyridyl)-1H-pyrazole-3-carboxylate (0.348 g, 5.0%) as a solid. The solvent of the second fraction eluted with the same solvent was evaporated under reduced pressure to give methyl 5-hydroxy-5-(6-methoxy-3-pyridazinyl)-1-(3-pyridyl)-4,5-dihydro-1H-pyrazole-3-carboxylate (3.11 g, 44%) as an amorphous product.

5-hydroxy-5-(6-methoxy-3-pyridazinyl)-1-(3-pyridyl)-4,5-dihydro-1

H-pyrazole-3-carboxylate:

ESI-MSm/z: 330 (M+H)⁺.]

Triethylamine (3.04 ml), methanesulfonyl chloride (1.35 ml), and 4-(dimethylamino)pyridine (0.111 g) were added to a solution of the resulting methyl 5-hydroxy-5-(6-methoxy-3-pyridazinyl)-1-(3-pyridyl)-4,5-dihydro-1 H-pyrazole-3-carboxylate (2.88 g) in dichloromethane (80 ml) at room temperature, and the mixture was stirred for 2.5 hours. Methanol was added to the reaction liquid, and chloroform and water were added and the phases were separated. The aqueous layer was further extracted with chloroform, and the combined organic layers were washed with brine, and dried over anhydrous sodium sulfate. After filtration, the solvent was evaporated under reduced pressure, and the residue was purified by column chromatography on silica gel (acetone-chloroform) to give methyl

5-(6-methoxy-3-pyridazinyl)-1-(3-pyridyl)-1H-pyrazole-3-carboxylate (1.558 g, 57%) as a solid.

[0630]

7) The title compound

Lithium hydroxide monohydrate (62 mg) was added to a solution of the methyl

5-(6-methoxy-3-pyridazinyl)-1-(3-pyridyl)-1H-pyrazole-3-carboxylate (0.399 g) in a mixture of tetrahydrofuran (5 ml), methanol (10 ml), and water (5 ml), and the mixture was stirred at 40°C for 1 hour. After cooling with air, the reaction liquid was neutralized with 1N aqueous

hydrochloric acid, and the solvent was evaporated under reduced pressure. The residue was acidified (to pH 4) by adding 1N aqueous hydrochloric acid, and the solid precipitate was collected by filtration to give the title compound (0.303 g, 80%) as a solid.

[0631]

$^1\text{H-NMR}$ (400 MHz, DMSO-d_6) δ : 4.00 (3H, s), 7.34 (1H, d, $J = 7.8$ Hz), 7.49 (1H, s), 7.53 (1H, dd, $J = 4.8, 7.8$ Hz), 7.86-7.91 (1H, m), 7.99 (1H, d like, $J = 9.3$ Hz), 8.60 (1H, d, $J = 2.0$ Hz), 8.64 (1H, d like, $J = 4.8$ Hz).

[0657]

[Referential Example 70] 2-Amino-1-fluoro-2-(fluoromethyl)propane hydrochloride

[0658]

[Chem 80]

[0659]

1) 3,3'-Dichloropivaloyl chloride

A solution of the 3,3'-dichloropivaloic acid (49.95 g) in thionyl chloride (70 ml) was heated under reflux for 4 hours. After cooling with air, the reaction solvent was evaporated under reduced pressure, and the residue was purified by distillation under reduced pressure [bp 82-90°C, 15 to 16 mmHg] to give 3,3-dichloropivaloyl chloride (37.36 g, 68%).

[0660]

$^1\text{H-NMR}$ (400 MHz, CDCl_3) δ : 1.51 (3H, s), 3.80 (2H, d, $J = 12.0$ Hz), 3.92 (2H, d, $J = 11.7$ Hz).

[0661]

2) 3,3'-Difluoropivaloyl fluoride

A solution of the 3,3'-dichloropivaloyl chloride (15.0 g) and potassium fluoride (spray dried, 20.0 g) in sulforane (50 ml) was stirred at 200°C for 5.5 hours. After cooling with air to 90°C, toluene (30 ml) was added, and the mixture was purified by distillation at atmospheric pressure (bp 105-113°C) to give 3,3'-difluoropivaloyl fluoride (content in toluene, 19%; 19.34 g).

[0662]

$^1\text{H-NMR}$ (400 MHz, CDCl_3) δ : 1.35 (3H, d, $J = 1.0$ Hz), 4.50 (1H, d, $J = 9.2$ Hz), 4.58-4.64 (2H, m), 4.70 (1H, d, $J = 9.5$ Hz).

[0663]

3) The title compound

A solution of the 3,3'-difluoropivaloyl fluoride (toluene solution, 19.3 g) and trimethylsilylazide (2.99 ml) in toluene (30 ml) was stirred overnight at 80°C under argon atmosphere. After cooling with air, conc. hydrochloric acid (5 ml) was added to the reaction liquid, and the mixture was stirred at 60°C for 1 hour. After cooling with air, the reaction solvent was evaporated under reduced pressure, and the residue was solidified with methanol-diethylether to give the title compound (354 mg, 16%).

[0664]

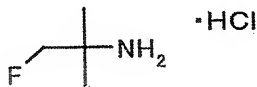

$^1\text{H-NMR}$ (400 MHz, CD_3OD) δ : 1.36 (3H, t, $J = 1.8$ Hz), 4.51-4.68 (4H, m).

[0665]

[Referential Example 71] 2-Amino-1-fluoro-2-methylpropane hydrochloride

[0666]

[Chem 81]

[0667]

1) N-Benzyl-2-amino-2-methyl-1-propanol

A solution of 2-amino-2-methyl-1-propanol (10.0 g), benzaldehyde (11.98 ml), and p-toluenesulfonic acid (10 mg) in benzene (300 ml) was heated under reflux for 4 hours using Dean-Stark apparatus. After cooling with air, the reaction solvent was evaporated under reduced pressure, and the residue was dissolved in methanol (200 ml). Cyano sodium borohydride (8.89 g) was added to the reaction liquid under ice cooling, and the mixture was stirred for 1.5 hours. The reaction solvent was evaporated under reduced pressure, and saturated aqueous sodium bicarbonate and ethyl acetate were added to the residue and the phases were separated. The organic layer was washed with brine, and dried over anhydrous magnesium sulfate. After filtration, the solvent was evaporated under reduced pressure, and the residue was purified by column chromatography on silica gel (dichloromethane-methanol-aqueous ammonia) to give N-benzyl-2-amino-2-methyl-1-propanol (10.36 g, 52%) as a solid.

[0668]

$^1\text{H-NMR}$ (400 MHz, CDCl_3) δ : 1.15 (6H, s), 1.86 (2H, br s), 3.35 (2H, s), 3.68 (2H, s), 7.30 (5H, s).

[0669]

2) 3-Benzyl-4,4-dimethyl-1,2,3-oxathiazole-2-oxide

A solution of thionyl chloride (1.49 ml) in dichloromethane (5 ml) was added dropwise to a solution of the N-benzyl-2-amino-2-methyl-1-propanol (3.32 g) and diisopropylethylamine (12.6 ml) in dichloromethane (50 ml) over 7 minutes at -20°C , and the mixture was stirred for 45 minutes. The reaction solvent was evaporated under reduced pressure, and the residue was purified by column chromatography on silica gel (hexane-ethyl

acetate) to give 3-benzyl-4,4-dimethyl-1,2,3-oxathiazole-2-oxide (3.91 g, 94%) as a solid.

[0670]

$^1\text{H-NMR}$ (400 MHz, CDCl_3) δ : 1.24 (3H, s), 1.45 (3H, s), 4.15 (1H, d, $J = 14.6$ Hz), 4.20 (1H, d, $J = 8.1$ Hz), 4.27 (1H, d, $J = 14.6$ Hz), 4.64 (1H, d, $J = 8.3$ Hz), 7.26-7.42 (5H, m).

[0671]

3) 3-Benzyl-4,4-dimethyl-1,2,3-oxathiazole-2,2-dioxide

Sodium periodate (2.73 g) was added to a solution of the 3-benzyl-4,4-dimethyl-1,2,3-oxathiazole-2-oxide (1.92 g) and ruthenium chloride hydrate (5 mg) in a mixture of acetonitrile (30 ml) and water (30 ml) at room temperature, and the mixture was stirred for 3 days. Water and diethylether were added to the reaction liquid and the phases were separated, and the organic layer was washed with brine, and dried over anhydrous sodium sulfate. After filtration, the solvent was evaporated under reduced pressure, and the residue was purified by column chromatography on silica gel (hexane-ethyl acetate) to give 3-benzyl-4,4-dimethyl-1,2,3-oxathiazole-2,2-dioxide (1.934 g, 94%) as an oily product.

[0672]

$^1\text{H-NMR}$ (400 MHz, CDCl_3) δ : 1.30 (6H, s), 4.26 (4H, d, $J = 1.2$ Hz), 7.26-7.44 (5H, m).

[0673]

4) N-Benzyl-2-amino-1-fluoro-2-methylpropane

Tetrabutylammonium fluoride (1.0M solution in tetrahydrofuran, 15.8 ml) was added to a solution of the

3-benzyl-4,4-dimethyl-1,2,3-oxathiazole-2,2-dioxide (1.91 g) in tetrahydrofuran (10 ml) at room temperature, and the mixture was stirred for 3 hours. The reaction liquid was evaporated under reduced pressure, and the residue was dissolved in diethylether (30 ml), and to this reaction liquid was added 20% aqueous sulfuric acid (10 ml) at room temperature, and the mixture was stirred overnight. Sodium bicarbonate was added in several portions to the reaction liquid for neutralization, and the mixture was extracted with diethylether. The organic layer was washed with brine, and dried over anhydrous sodium sulfate. After filtration, the solvent was evaporated under reduced pressure, and the residue was purified by column chromatography on silica gel (hexane-ethyl acetate) to give N-benzyl-2-amino-1-fluoro-2-methylpropane (700 mg, 49%) as an oily product.

[0674]

$^1\text{H-NMR}$ (400 MHz, CDCl_3) δ : 1.16 (6H, d, $J = 2.0$ Hz), 1.39 (1H, s), 3.73 (2H, s), 4.26 (2H, d, $J = 47.9$ Hz), 7.21-7.37 (5H, m).

[0675]

5) The title compound

To a solution of the N-benzyl-2-amino-1-fluoro-2-methylpropane (690 mg) in methanol (20 ml) were added 10% palladium on carbon (50 mg) and conc. hydrochloric acid (1 ml), and the mixture was stirred overnight at room temperature under hydrogen atmosphere (3.5 atm). Another portion of 10% palladium on carbon (100 mg) was added to the reaction liquid, and the mixture was stirred at 50°C for 6.5 hours under hydrogen atmosphere (4.0 atm). After cooling with air, the reaction liquid was filtered through celite, and the solvent was

evaporated under reduced pressure to give the title compound (506 mg, measured) as a solid.

[0676]

¹H-NMR (400 MHz, CD₃OD)δ: 1.37 (6H, s), 4.42 (2H, d, J = 37.2 Hz).

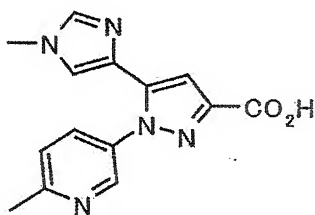

[0677]

[Referential Example 72]

5-(1-Methyl-1H-imidazol-4-yl)-1-(6-methyl-3-pyridyl)-1H-pyrazole-3-carboxylic acid

[0678]

[Chem 82]

[0679]

1) Ethyl 4-(1-methyl-1H-imidazol-4-yl)-2,4-dioxobutanoate

The procedure of Referential Example 36(3) was repeated by using 4-acetyl-1-methyl-1H-imidazole (0.75 g) and diethyl oxalate (1.64 ml, 12.08 mmol) to give ethyl 4-(1-methyl-1H-imidazol-4-yl)-2,4-dioxobutanoate (1.122 g, 83%) as a solid.

[0680]

¹H-NMR (400 MHz, CDCl₃)δ: 1.39 (3H, t, J = 7.2 Hz), 3.79 (3H, s), 4.37 (3H, q, J = 7.1 Hz), 7.15 (1H, s), 7.52 (1H, s), 7.70 (1H, s).

ESI-MSm/z: 225 (M+H)⁺.

[0681]

2) Ethyl

5-(1-methyl-1H-imidazol-4-yl)-1-(6-methyl-3-pyridyl)-1H-pyrazole-3-carboxylate

A solution of the ethyl

4-(1-methyl-1H-imidazole-4-yl)-2,4-dioxobutanoate (1.12 g) and the 5-hydrazino-2-methylpyridine (676 mg) of Referential Example 31 in 1N hydrochloric acid-ethanol (40 ml) was heated under reflux for 45 minutes. After cooling with air, chloroform and saturated aqueous sodium bicarbonate were added to the mixture, and the phases were separated, and the organic layer was dried over anhydrous sodium sulfate. After filtration, the solvent was evaporated under reduced pressure, and the residue was purified by thin layer chromatography on silica gel (methanol-chloroform) to give ethyl

5-(1-methyl-1H-imidazol-4-yl)-1-(6-methyl-3-pyridyl)-1H-pyrazole-3-carboxylate (705 mg, 45%) as a solid.

[0682]

¹H-NMR (400 MHz, CDCl₃) δ : 1.41 (3H, t, J = 7.2 Hz), 2.63 (3H, s), 3.64 (3H, s), 4.44 (2H, q, J = 7.1 Hz), 6.64 (1H, s), 7.15 (1H, s), 7.27 (1H, s), 7.40 (1H, s), 7.78 (1H, dd, J = 8.3, 2.7 Hz), 8.54 (1H, d, J = 2.7 Hz).

[0683]

3) The title compound

The procedure of Referential Example 42(5) was repeated by using ethyl

5-(1-methyl-1H-imidazol-4-yl)-1-(6-methyl-3-pyridyl)-1H-pyrazole-

3-carboxylate (694 mg) and lithium hydroxide monohydrate (112 mg) to give the title compound (444 mg, 70%) as a solid.

[0685]

[Referential Example 73]

5-(5-Cyano-2-pyridyl)-1-(3-pyridyl)-1H-pyrazole-3-carboxylic acid

[0686]

[Chem 83]

[0687]

Method A

1) Ethyl

5-(5-hydroxy-2-pyridyl)-1-(3-pyridyl)-1H-pyrazole-3-carboxylate

To a solution of the ethyl

5-(5-benzyloxy-2-pyridyl)-1-(3-pyridyl)-1H-pyrazole-3-carboxylate (4.63 g) of Referential Example 18(2) in ethanol (46 ml) and ethyl acetate (46 ml) was added 10% palladium on carbon (4.63 g), and the mixture was stirred at room temperature for 6 hours in the presence

of hydrogen. The catalyst was removed from the reaction liquid by filtration, and the solvent was evaporated under reduced pressure to give ethyl

5-(5-hydroxy-2-pyridyl)-1-(3-pyridyl)-1H-pyrazole-3-carboxylate (3.48 g, 97%) as a solid.

[0688]

$^1\text{H-NMR}$ (400 MHz, DMSO-d_6) δ : 1.32 (3H, t, $J = 7.1$ Hz), 4.33 (2H, q, $J = 7.1$ Hz), 7.20-7.25 (2H, m), 7.49 (1H, dd, $J = 8.2, 4.8$ Hz), 7.55 (1H, d, $J = 8.5$ Hz), 7.76-7.79 (1H, m), 7.93 (1H, d, $J = 2.9$ Hz), 8.49 (1H, d, $J = 2.7$ Hz), 8.58-8.60 (1H, m), 10.31 (1H, br s).

FAB-MSm/z: 311 ($\text{M}+\text{H}$) $^+$.

[0689]

2) Ethyl

1-(3-pyridyl)-5-(5-trifluoromethanesulfonyloxy-2-pyridyl)-1H-pyrazole-3-carboxylate

Trifluoromethanesulfonic anhydride (2.26 ml) was added dropwise to a solution of ethyl

5-(5-hydroxy-2-pyridyl)-1-(3-pyridyl)-1H-pyrazole-3-carboxylate (3.47 g) in a mixture of dichloromethane (69 ml) and pyridine (23 ml) at room temperature under argon atmosphere, and the mixture was stirred for 85 minutes. Water and chloroform were added to the reaction liquid and the phases were separated, and the organic layer was dried over anhydrous sodium sulfate. After filtration, the solvent was evaporated under reduced pressure, and the residue was purified by column chromatography on silica gel (ethyl acetate-chloroform) to give ethyl 1-(3-pyridyl)-5-(5-trifluoromethanesulfonyloxy-2-pyridyl)-1H-pyrazole-3-carboxylate (4.95 g, quantitative) as a solid.

[0690]

$^1\text{H-NMR}$ (400 MHz, CDCl_3) δ : 1.42-1.45 (3H, m), 4.45-4.50 (2H, m), 7.35 (1H, s), 7.38-7.42 (1H, m), 7.59-7.61 (1H, m), 7.67-7.70 (1H, m), 7.79-7.82 (1H, m), 8.41 (1H, d, $J = 2.7$ Hz), 8.56 (1H, d, $J = 2.4$ Hz), 8.65 (1H, dd, $J = 4.6, 1.5$ Hz).

FAB-MSm/z: 443 ($\text{M}+\text{H}$) $^+$.

[0691]

3) The title compound

Under argon atmosphere, a suspension of tri-*n*-butyl tin cyanide (14.1 g) and tetrakis(triphenylphosphine)palladium(0) (19.4 g) in 1,2-dichloroethane (133 ml) was heated under reflux for 2 hours, and a solution of ethyl

1-(3-pyridyl)-5-(5-trifluoromethanesulfonyloxy-2-pyridyl)-1H-pyrazole-3-carboxylate (4.94 g) in 1,2-dichloroethane (109 ml) was added dropwise to the reaction liquid, and the mixture was heated under reflux for 13 hours. After cooling with air, saturated aqueous sodium bicarbonate was added to the reaction liquid, and the mixture was filtered through celite. Water and chloroform were added to the filtrate and the phases were separated, and the organic layer was dried over anhydrous sodium sulfate. After filtration, the solvent was evaporated under reduced pressure, and the residue was purified by column chromatography on silica gel (ethyl acetate-chloroform) to give ethyl

5-(5-cyano-2-pyridyl)-1-(3-pyridyl)-1H-pyrazole-3-carboxylate. A solution of lithium hydroxide monohydrate (0.470 g) in water (43 ml) was added dropwise to a suspension of the resulting ethyl ester derivative in tetrahydrofuran (87 ml) at room temperature, and the

mixture was stirred for 40 minutes. Water and chloroform were added to the reaction liquid and the aqueous layer was separated, and the aqueous layer was neutralized by adding 1N aqueous hydrochloric acid (11.2 ml), and a mixed solvent of methanol and chloroform (1:10) was added to the solution, and the phases were separated. The solvent was evaporated under reduced pressure to give the title compound (2.52 g, 77%) as a solid.

[0692]

$^1\text{H-NMR}$ (400 MHz, DMSO-d_6) δ : 7.50-7.54 (1H, m), 7.62 (1H, s), 7.85-7.87 (1H, m), 8.04 (1H, d, $J = 8.3$ Hz), 8.41-8.44 (1H, m), 8.58 (1H, d, $J = 2.4$ Hz), 8.65 (1H, d, $J = 4.6$ Hz), 8.80-8.81 (1H, m), 13.23 (1H, s).

FAB-MSm/z: 292 ($\text{M}+\text{H}$) $^+$.

Method B

[0693]

1) 2-Acetyl-5-cyanopyridine

Ammonium peroxodisulfate (10.3 g) was gradually added to a solution of 3-cyanopyridine (3.12 g), pyruvic acid (6.23 ml), and silver nitrate (1.27 g) in a mixture of dichloromethane (150 ml) and water (150 ml) at room temperature. Sulfuric acid (3.2 ml) was gradually added to the reaction liquid under ice cooling, and the mixture was stirred at 40°C for 1.5 hours. To the reaction liquid was added 1N aqueous sodium hydroxide to make the solution basic under ice cooling, and the solution was extracted with dichloromethane. The organic layer was dried over anhydrous sodium sulfate. After filtration, the solvent was evaporated under reduced pressure, and the residue was purified

by column chromatography on silica gel (ethyl acetate-hexane) to give 2-acetyl-5-cyanopyridine (903 mg, 21%) as a solid.

[0694]

$^1\text{H-NMR}$ (400 MHz, CDCl_3) δ : 2.75 (3H, s), 8.13-8.16 (2H, m), 8.95 (1H, d, $J = 1.2$ Hz).

[0695]

2) Ethyl 4-(5-cyano-2-pyridyl)-2,4-dioxobutanoate

The procedure of Referential Example 36(3) was repeated by using 2-acetyl-5-cyanopyridine (900 mg) and diethyl oxalate (1.67 ml) to give ethyl 4-(5-cyano-2-pyridyl)-2,4-dioxobutanoate (1.188 g, 78%) as a solid.

[0696]

$^1\text{H-NMR}$ (400 MHz, CDCl_3) δ : 1.43 (3H, t, $J = 7.1$ Hz), 4.42 (2H, q, $J = 7.1$ Hz), 7.69 (1H, s), 8.18 (1H, dd, $J = 8.2, 2.1$ Hz), 8.26 (1H, d, $J = 8.1$ Hz), 8.98 (1H, s).

[0697]

3) Ethyl

5-(5-cyano-2-pyridyl)-1-(3-pyridyl)-1H-pyrazole-3-carboxylate

The procedure of Referential Example 72(2) was repeated by using the ethyl 4-(5-cyano-2-pyridyl)-2,4-dioxobutanoate (1.72 g) and the 3-hydrazinopyridine (0.92 g) of Referential Example 32 to give ethyl 5-(5-cyano-2-pyridyl)-1-(3-pyridyl)-1H-pyrazole-3-carboxylate (1.01 g, 45%) as a solid.

[0698]

$^1\text{H-NMR}$ (400 MHz, CDCl_3) δ : 1.44 (3H, t, $J = 7.1$ Hz), 4.48 (2H, q, $J = 7.2$ Hz), 7.41-7.43 (1H, m), 7.42 (1H, s), 7.61 (1H, d, $J = 8.1$ Hz),

7.82 (1H, d, $J = 8.1$ Hz), 8.00 (1H, dd, $J = 8.2, 2.1$ Hz), 8.54 (1H, d, $J = 2.7$ Hz), 8.67-8.68 (2H, m).

[0699]

4) The title compound

The procedure of Referential Example 72(3) was repeated by using ethyl

5-(5-cyano-2-pyridyl)-1-(3-pyridyl)-1H-pyrazole-3-carboxylate (5.69 g) and lithium hydroxide monohydrate (823 mg) to give the title compound (5.19 g, measured) as a solid.

[0700]

$^1\text{H-NMR}$ (400 MHz, DMSO-d_6) δ : 7.53 (1H, dd, $J = 8.1, 4.9$ Hz), 7.63 (1H, s), 7.87 (1H, d, $J = 8.3$ Hz), 8.05 (1H, d, $J = 8.3$ Hz), 8.44 (1H, dd, $J = 8.3, 2.2$ Hz), 8.59 (1H, d, $J = 2.4$ Hz), 8.65 (1H, d, $J = 4.6$ Hz), 8.82 (1H, d, $J = 2.2$ Hz).

[0701]

[Referential Example 74] Ethyl

5-(4-cyanophenyl)-1-(3-pyridyl)-1H-pyrazole-3-carboxylate (An alternative for the synthesis of Referential Example 24(3))

1) Ethyl 4-(4-cyanophenyl)-2,4-dioxobutanoate

Lithium bis(trimethylsilyl)amide (1.0M solution in tetrahydrofuran, 14.1 ml) was added dropwise to a solution of 4-acetyl benzonitrile (1.0 g) in tetrahydrofuran (50 ml) at -78°C over 10 minutes under argon atmosphere, and the mixture was stirred for another 30 minutes. Diethyl oxalate (1.41 ml) was added dropwise to the reaction liquid, and the mixture was stirred for 10 minutes, and at room temperature for another 0.5 hours. 1N aqueous hydrochloric acid and ethyl acetate were added to the reaction liquid and the phases were

separated, and the organic layer was dried over anhydrous magnesium sulfate. After filtration, the solvent was evaporated under reduced pressure to give ethyl 4-(4-cyanophenyl)-2,4-dioxobutanoate (1.7 g, measured) as a solid.

[0702]

$^1\text{H-NMR}$ (400 MHz, CDCl_3) δ : 1.42 (3H, t, $J = 7.08$ Hz), 4.42 (2H, q, $J = 7.08$ Hz), 7.07 (1H, s), 7.81 (2H, d, $J = 8.30$ Hz), 8.08 (2H, d, $J = 8.30$ Hz).

EI-MSm/z: 245 (M^+).

[0703]

2) The title compound

Acetic acid (2.16 ml) was added to a solution of the ethyl 4-(4-cyanophenyl)-2,4-dioxobutanoate (3.0 g) and the 3-hydrazinopyridine (2.46 g) of Referential Example 32 in ethanol (300 ml), and the mixture was heated under reflux for 16 hours. After cooling with air, conc. hydrochloric acid (1.5 ml) was added to the reaction liquid, and the mixture was heated under reflux for 0.5 hours. After cooling with air, saturated aqueous sodium bicarbonate and chloroform were added to the reaction liquid and the phases were separated, and the organic layer was dried over anhydrous magnesium sulfate. After filtration, the solvent was evaporated under reduced pressure, and the residue was purified by column chromatography on silica gel (2% methanol-dichloromethane) to give the title compound (2.15 g, 55%) as a solid.

EI-MSm/z: 318 (M^+).

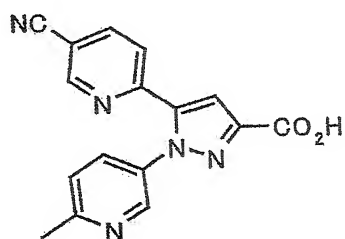

[0704]

[Referential Example 75]

5-(5-Cyano-2-pyridyl)-1-(6-methyl-3-pyridyl)-1H-pyrazole-3-carboxylic acid

[0705]

[Chem 84]

[0706]

1) Ethyl

5-(5-benzyloxy-2-pyridyl)-1-(6-methyl-3-pyridyl)-1H-pyrazole-3-carboxylate

The procedure of Referential Example 9(4) was repeated by using the ethyl 4-(5-benzyloxy-2-pyridyl)-2,4-dioxobutanoate (2.62 g) of Referential Example 14(3) and the 5-hydrazino-2-methylpyridine (0.986 g) of Referential Example 31 to give ethyl 5-(5-benzyloxy-2-pyridyl)-1-(6-methyl-3-pyridyl)-1H-pyrazole-3-carboxylate (1.74 g, 52%) as a solid.

[0707]

$^1\text{H-NMR}$ (400 MHz, CDCl_3) δ : 1.42 (3H, t, $J = 7.1$ Hz), 2.60 (3H, s), 4.46 (2H, q, $J = 7.1$ Hz), 5.10 (2H, s), 7.19-7.42 (9H, m), 7.72 (1H, dd, $J = 8.3, 2.4$ Hz), 8.26 (1H, d, $J = 2.9$ Hz), 8.38 (1H, d, $J = 2.4$ Hz).
FAB-MSm/z: 415 ($\text{M}+\text{H}$) $^+$.

[0708]

2) Ethyl

5-(5-hydroxy-2-pyridyl)-1-(6-methyl-3-pyridyl)-1H-pyrazole-3-carboxylate

To a solution of the ethyl 5-(5-benzyloxy-2-pyridyl)-1-(6-methyl-3-pyridyl)-1H-pyrazole-3-carboxylate (1.73 g) in a mixture of ethanol (34 ml) and ethyl acetate (34 ml) was added 10% palladium on carbon (1.73 g), and the mixture was stirred at room temperature in the presence of hydrogen gas for 3.5 hours. The reaction liquid was separated by filtration, and the solvent was evaporated under reduced pressure to give ethyl 5-(5-hydroxy-2-pyridyl)-1-(6-methyl-3-pyridyl)-1H-pyrazole-3-carboxylate (1.28 g, 95%) as a solid.

3) The title compound

Trifluoromethanesulfonic anhydride (0.791 ml) was added dropwise to a solution of the ethyl 5-(5-hydroxy-2-pyridyl)-1-(6-methyl-3-pyridyl)-1H-pyrazole-3-carboxylate (1.27 g) in a mixture of dichloromethane (25 ml) and pyridine (8.3 ml) at room temperature under argon atmosphere, and the mixture was stirred for 1 hour. To the reaction liquid was added another portion of the anhydrous trifluoromethanesulfonic anhydride (0.791 ml), and

the mixture was stirred for 1 hour. Water and chloroform were added to the reaction liquid and the phases were separated, and the organic layer was dried over anhydrous sodium sulfate. After filtration, the solvent was evaporated under reduced pressure, and the residue was purified by column chromatography on silica gel (ethyl acetate-chloroform) to give ethyl 1-(6-methyl-3-pyridyl)-5-(5-trifluoromethanesulfonyloxy-2-pyridyl)-1H-pyrazole-3-carboxylate (1.77 g, 99%) as a solid.

[0711]

$^1\text{H-NMR}$ (400 MHz, CDCl_3) δ : 1.42-1.45 (3H, m), 2.63 (3H, s), 4.44-4.50 (2H, m), 7.24 (1H, d, $J = 8.3$ Hz), 7.34 (1H, s), 7.55-7.57 (1H, m), 7.65-7.70 (2H, m), 8.43-8.45 (2H, m).

FAB-MSm/z: 457 ($\text{M}+\text{H}$) $^+$.

A suspension of tri-n-butyl tin cyanide (4.88 g) and tetrakis (triphenylphosphine)palladium(0) (6.68 g) in 1,2-dichloroethane (48 ml) was heated under reflux for 2 hours under argon atmosphere, and to the reaction liquid was added dropwise a solution of ethyl 1-(6-methyl-3-pyridyl)-5-(5-trifluoromethanesulfonyloxy-2-pyridyl)-1H-pyrazole-3-carboxylate (1.76 g) in 1,2-dichloroethane (39 ml), and the mixture was stirred at 80°C for 23 hours. After cooling with air, saturated aqueous sodium bicarbonate was added to the reaction liquid, and the mixture was filtered through celite, and water and chloroform were added to the filtrate and the phases were separated. The organic layer was dried over anhydrous sodium sulfate. After filtration, the solvent was evaporated under reduced pressure, and the residue was purified by column chromatography on silica gel (ethyl acetate-chloroform) to give ethyl

5-(5-cyano-2-pyridyl)-1-(6-methyl-3-pyridyl)-1H-pyrazole-3-carboxylate (2.07 g). A solution of lithium hydroxide monohydrate (0.162 g) in water (21 ml) was added dropwise to a suspension of the resulting ethyl ester derivative in tetrahydrofuran (41 ml) at room temperature, and the mixture was stirred for 1.5 hours. Water and chloroform were added to the reaction liquid and the aqueous layer was separated. The aqueous layer was neutralized with 1N aqueous hydrochloric acid (3.86 ml), and the solid precipitate was collected by filtration to give the title compound (0.750 g, 64%) as a solid.

[0712]

$^1\text{H-NMR}$ (400 MHz, DMSO-d_6) δ : 2.54 (3H, s), 7.36 (1H, d, $J = 8.3$ Hz), 7.57 (1H, s), 7.71-7.73 (1H, m), 7.99 (1H, d, $J = 8.3$ Hz), 8.40-8.43 (2H, m), 8.84 (1H, d, $J = 1.2$ Hz), 13.20 (1H, br s).

[0750]

[Chem 91]

[0751]

1) 5-Ethyl-N-methoxy-N-methyl-2-pyridinecarboxamide

Selenium dioxide (8.32 g) was added to a solution of 5-ethyl-2-methylpyridine (6.06 g) in pyridine (70 ml), and the mixture was stirred at 85°C for 19.5 hours, and then heated under reflux for 28 hours. After cooling with air, the reaction liquid was filtered, and the solvent was evaporated under reduced pressure. Water was added to the residue, and the mixture was filtered through celite, and the solvent was evaporated under reduced pressure to give a crude 5-ethyl-2-pyridinecarboxylic acid (5.79 g, 76%) as a solid.

Triethylamine (10.7 ml) and

1-(3-dimethylaminopropyl)-3-ethylcarbodiimide hydrochloride (11.0 g) were added to a suspension of this crude 5-ethyl-2-pyridinecarboxylic acid (5.79 g), N,O-dimethylhydroxylamine hydrochloride (5.61 g), and 1-hydroxybenzotriazole (8.81 g) in N,N-dimethylformamide (100 ml) at room temperature, and the mixture was stirred for 16 hours. The reaction solvent was evaporated under reduced pressure, and ethyl acetate and

saturated aqueous sodium bicarbonate were added to the residue and the phases were separated. The aqueous layer was extracted twice with ethyl acetate, and the combined organic layers were dried over anhydrous sodium sulfate. After filtration, the solvent was evaporated under reduced pressure, and the residue was purified by column chromatography on silica gel (ethyl acetate-hexane) to give 5-ethyl-N-methoxy-N-methyl-2-pyridinecarboxamide (6.66 g, 89%) as an oily product.

[0752]

$^1\text{H-NMR}$ (400 MHz, CDCl_3) δ : 1.28 (3H, t, $J = 7.6$ Hz), 2.71 (2H, q, $J = 7.6$ Hz), 3.42 (3H, s), 3.77 (3H, s), 7.62 (2H, br s), 8.46 (1H, s). ESI-MS m/z : 195 ($\text{M}+\text{H}$) $^+$.

2) 1-(5-Ethyl-2-pyridyl)-1-ethanone

Methyl lithium (0.98M solution in diethylether, 38.5 ml) was added to a solution of the 5-ethyl-N-methoxy-N-methyl-2-pyridinecarboxamide (6.65 g) in tetrahydrofuran (100 ml) at -78°C , and the mixture was stirred for 15 minutes, and at room temperature for another 3 hours. Saturated aqueous sodium bicarbonate and ethyl acetate were added to the reaction liquid and the phases were separated, and the aqueous layer was further extracted with ethyl acetate. The combined organic layers were dried over anhydrous sodium sulfate. After filtration, the solvent was evaporated under reduced pressure, and the residue was purified by column chromatography on silica gel (ethyl acetate-hexane) to give 1-(5-ethyl-2-pyridyl)-1-ethanone (4.63 g, 90%) as an oily product.

[0753]

^1H -NMR (400 MHz, CDCl_3) δ : 1.29 (3H, t, $J = 7.6$ Hz), 2.71 (3H, s), 2.74 (2H, q, $J = 7.6$ Hz), 7.63–7.66 (1H, m), 7.98 (1H, d, $J = 8.1$ Hz), 8.52–8.53 (1H, m).

ESI-MSm/z: 150 ($\text{M}+\text{H}$) $^+$.

3) The title compound

Lithium bis(trimethylsilyl)amide (1.0M solution in tetrahydrofuran, 12.2 ml) was added to a solution of 1-(5-ethyl-2-pyridyl)-1-ethanone (1.52 g) in tetrahydrofuran (10 ml) at -78°C , and the mixture was stirred for 30 minutes. Dimethyl oxalate (1.77 g) was added to the reaction liquid, and the mixture was stirred at the same temperature for 10 minutes, and the stirring was continued for another 2.5 hours while the temperature was gradually resumed to room temperature. Diethylether and water were added to the reaction liquid and the aqueous layer was separated, and 1N aqueous hydrochloric acid (13 ml) was added to the aqueous layer, and the aqueous layer was extracted three times with dichloromethane. The combined organic layers were dried over anhydrous sodium sulfate. After filtration, the solvent was evaporated under reduced pressure to give crude methyl 4-(5-ethyl-2-pyridyl)-2,4-dioxobutanoate (2.12 g, 89%).

3-chloro-6-hydrazinopyridazine (1.30 g) was added to a solution of this crude methyl 4-(5-ethyl-2-pyridyl)-2,4-dioxobutanoate (2.12 g) in methanol, and the mixture was heated under reflux for 15.5 hours. Conc. hydrochloric acid (0.375 ml) was added to the reaction liquid, and the mixture was heated under reflux for 2 hours. Another portion of conc. hydrochloric acid (0.375 ml) was added to the reaction liquid, and the mixture was heated under reflux for 18 hours. After cooling with air, ethyl acetate and saturated aqueous sodium bicarbonate were

added to the reaction liquid and the phases were separated, and the aqueous layer was further extracted with ethyl acetate. The combined organic layers were dried over anhydrous sodium sulfate. After filtration, the solvent was evaporated under reduced pressure, and the residue was purified by column chromatography on silica gel (ethyl acetate-hexane) to give the title compound (0.934 g, 30%) as a solid.

[Chem 100]

[0800]

1) Methyl 4-(5-methyl-2-pyrazinyl)-2,4-dioxobutanoate

The procedure of Referential Example 85(1) was repeated by using the 1-(5-methyl-2-pyrazinyl)-1-ethanone (7.24 g) of Referential Example 36(2), dimethyl oxalate (12.6 g), and lithium bis(trimethylsilyl)amide (1.0M solution in tetrahydrofuran, 58.5 ml) to give methyl 4-(5-methyl-2-pyrazinyl)-2,4-dioxobutanoate (7.84 g, 66%) as a solid.

[0801]

$^1\text{H-NMR}$ (400 MHz, DMSO-d_6) δ : 2.63 (3H, s), 3.87 (3H, s), 7.41 (1H, br s), 8.73 (1H, s), 9.13 (1H, s).

EI-MSm/z: 222 (M^+).

2) Methyl

1-(6-chloro-3-pyridazinyl)-5-(5-methyl-2-pyrazinyl)-1H-pyrazole-3-carboxylate

The procedure of Referential Example 9, Method B(2) was repeated by using methyl 4-(5-methyl-2-pyrazinyl)-2,4-dioxobutanoate (7.83 g) and 3-chloro-6-hydrazinopyridazine (5.09 g) to give methyl 1-(6-chloro-3-pyridazinyl)-5-(5-methyl-2-pyrazinyl)-1H-pyrazole-3-carboxylate (6.60 g, 56%) as a solid.

[0802]

$^1\text{H-NMR}$ (400 MHz, DMSO-d_6) δ : 2.53 (3H, s), 3.92 (3H, s), 7.63 (1H, s), 8.20-8.29 (2H, m), 8.37 (1H, m), 8.99 (1H, d, $J = 1.5$ Hz).

EI-MSm/z: 330 (M^+).

3)

1-(6-methoxy-3-pyridazinyl)-5-(5-methyl-2-pyrazinyl)-1H-pyrazole-3-carboxylic acid

Under argon atmosphere, sodium methoxide (3.22 g) was added to a suspension of methyl

1-(6-chloro-3-pyridazinyl)-5-(5-methyl-2-pyrazinyl)-1H-pyrazole-3-carboxylate (6.58 g) in methanol (132 ml) at room temperature, and the mixture was heated under reflux for 2 hours. After cooling with air, water (132 ml) was added, and the mixture was stirred at room temperature for 1 hour. 1N aqueous hydrochloric acid (50 ml) was added to the reaction liquid, and the mixture was stirred at room temperature for 10 minutes, and the solid precipitate was collected by filtration to give

1-(6-methoxy-3-pyridazinyl)-5-(5-methyl-2-pyrazinyl)-1H-pyrazole-3-carboxylic acid (5.50 g, 89%) as a solid.

[0803]

$^1\text{H-NMR}$ (400 MHz, DMSO-d_6) δ : 2.51 (3H, s), 4.05 (3H, s), 7.48-7.50 (2H, m), 8.04 (1H, d, $J = 9.3$ Hz), 8.37 (1H, m), 8.91 (1H, d, $J = 1.5$ Hz), 13.28 (1H, br s).

EI-MSm/z: 312 (M^+).

4) Methyl

1-(6-methoxy-3-pyridazinyl)-5-(5-methyl-2-pyrazinyl)-1H-pyrazole-3-carboxylate

Under argon atmosphere at 0°C, (trimethylsilyl)dizaomethane (2.0M solution in hexane, 6.72 ml) was added dropwise to a suspension of

1-(6-methoxy-3-pyridazinyl)-5-(5-methyl-2-pyrazinyl)-1H-pyrazole-3-carboxylic acid (3.50 g) in a mixture of dichloromethane (70 ml) and methanol (35 ml), and the mixture was stirred for 1.5 hours. Another portion of the (trimethylsilyl)dizaomethane (2.0M solution in hexane, 6.72 ml) was added to the reaction liquid, and the mixture was stirred for 2 hours. The solvent was evaporated under reduced pressure, and the residue was purified by column chromatography on silica gel (ethyl acetate-chloroform) to give methyl

1-(6-methoxy-3-pyridazinyl)-5-(5-methyl-2-pyrazinyl)-1H-pyrazole-3-carboxylate (3.41 g, 93%) as a solid.

[0804]

¹H-NMR (400 MHz, CDCl₃)δ: 2.59 (3H, s), 4.00 (3H, s), 4.11 (3H, s), 7.18 (1H, d, J = 9.3 Hz), 7.27-7.29 (1H, m), 7.98-8.01 (1H, m), 8.29 (1H, m), 8.71 (1H, d, J = 1.5 Hz).

EI-MSm/z: 326 (M⁺).

5) Methyl

5-(5-carboxy-2-pyrazinyl)-1-(6-methoxy-3-pyridazinyl)-1H-pyrazole-3-carboxylate

The procedure of Referential Example 57(1) was repeated by using the methyl

1-(6-methoxy-3-pyridazinyl)-5-(5-methyl-2-pyrazinyl)-1H-pyrazole-3-carboxylate (3.40 g) and selenium dioxide (4.62 g) to give methyl 5-(5-carboxy-2-pyrazinyl)-1-(6-methoxy-3-pyridazinyl)-1H-pyrazole-3-carboxylate (2.57 g, 69%) as a solid.

[0805]

$^1\text{H-NMR}$ (400 MHz, DMSO-d_6) δ : 3.92 (3H, s), 4.05 (3H, s), 7.52 (1H, d, $J = 9.3$ Hz), 7.77 (1H, s), 8.10 (1H, d, $J = 9.3$ Hz), 8.98 (1H, d, $J = 1.5$ Hz), 9.21 (1H, d, $J = 1.5$ Hz).

EI-MSm/z: 356 (M^+).

6) Methyl

5-(5-tert-butoxycarbonylamino-2-pyrazinyl)-1-(6-methoxy-3-pyridazinyl)-1H-pyrazole-3-carboxylate

The procedure of Referential Example 57(2) was repeated by using 5-(5-carboxy-2-pyrazinyl)-1-(6-methoxy-3-pyridazinyl)-1H-pyrazole-3-carboxylic acid (2.56 g), diphenylphosphorylazide (1.70 ml), and tert-butanol (1.51 ml) to give methyl 5-[5-(tert-butoxycarbonylamino)-2-pyrazinyl]-1-(6-methoxy-3-pyridazinyl)-1H-pyrazole-3-carboxylate (0.886 g, 29%) as a solid.

[0806]

$^1\text{H-NMR}$ (400 MHz, CDCl_3) δ : 1.54 (9H, s), 4.00 (3H, s), 4.12 (3H, s), 7.17 (1H, d, $J = 9.3$ Hz), 7.24-7.27 (1H, m), 7.57 (1H, s), 7.95 (1H, d, $J = 9.3$ Hz), 8.48 (1H, d, $J = 1.5$ Hz), 9.11 (1H, d, $J = 1.5$ Hz).
EI-MSm/z: 427 (M^+).

7) The title compound

To a suspension of methyl 5-[5-(tert-butoxycarbonylamino)-2-pyrazinyl]-1-(6-methoxy-3-pyridazinyl)-1H-pyrazole-3-carboxylate (0.880 g) in a mixture of tetrahydrofuran (18 ml) and methanol (18 ml) was added 1N aqueous solution of sodium hydroxide (5.15 ml) at room temperature for 4 hours. The reaction liquid was neutralized by adding 1N aqueous hydrochloric acid (5.15 ml), and water (250 ml) was added to the reaction liquid.

The solid precipitate was collected by filtration to give the title compound (0.732 g, 86%) as a solid.

[0807]

$^1\text{H-NMR}$ (400 MHz, DMSO-d_6) δ : 1.48 (9H, s), 4.05 (3H, m), 7.44 (1H, m), 7.49 (1H, dd, $J = 9.3, 1.0$ Hz), 8.02 (1H, dd, $J = 9.3, 1.0$ Hz), 8.71 (1H, m), 8.82 (1H, m), 10.39 (1H, s).

EI-MSm/z: 413 (M^+).

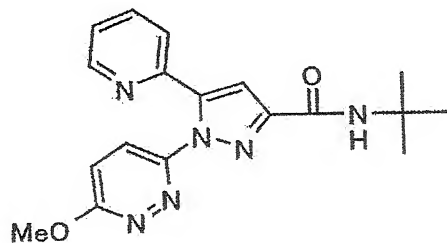

[0808]

[Example 1]

N-tert-Butyl-1-(6-methoxy-3-pyridazinyl)-5-(2-pyridyl)-1H-pyrazole-3-carboxamide

[0809]

[Chem 101]

[0810]

To a solution of the 1-(6-methoxy-3-pyridazinyl)-5-(2-pyridyl)-1H-pyrazole-3-carboxylic acid (0.250 g) of Referential Example 9, 1-ethyl-3-(3-dimethylaminopropyl)carbodiimide hydrochloride (0.177 g), and 1-hydroxybenzotriazole (0.125 g) in N,N -dimethylformamide (5 ml) was added tert-butylamine (0.0967 ml) and triethylamine (0.129 ml), and the mixture was stirred at room temperature for 43 hours.

Water and ethyl acetate were added to the reaction liquid and the phases were separated, and the organic layer was dried over anhydrous sodium sulfate. After filtration, the solvent was evaporated under reduced pressure, and the residue was purified by thin layer chromatography on silica gel (ethyl acetate-chloroform) to give the title compound (0.185 g, 63%) as a solid.

[0811]

$^1\text{H-NMR}$ (400 MHz, CDCl_3) δ : 1.48 (9H, s), 4.12 (3H, s), 6.83 (1H, s), 7.12 (1H, d, $J = 9.0$ Hz), 7.18-7.21 (1H, m), 7.20 (1H, s), 7.59-7.61 (1H, m), 7.72-7.76 (2H, m), 8.35-8.37 (1H, m).

1)

6-[5-tert-Butylcarbamoyl-2-(6-methoxy-3-pyridyl)-2H-pyrazol-3-yl]-3-pyridyl trifluoromethanesulfonate

Under argon atmosphere, trifluoromethanesulfonic anhydride (1.24 ml) was added dropwise to a solution of the N-tert-butyl-5-(5-hydroxy-2-pyridyl)-1-(6-methoxy-2-pyridyl)-1H-pyrazole-3-carboxamide (2.47 g) of Example 6 and pyridine (1.79 ml) in dichloromethane (49 ml) at room temperature, and the mixture was stirred for 1 hour. Water and chloroform were added to the reaction liquid and the phases were separated, and the organic layer was dried over anhydrous sodium sulfate. After filtration, the solvent was evaporated under reduced pressure, and the residue was purified by

column chromatography on silica gel (ethyl acetate-hexane) to give trifluoromethanesulfonate derivative (2.83 g, 84%) as a solid.

[0846]

$^1\text{H-NMR}$ (400 MHz, CDCl_3) δ : 1.47 (9H, s), 3.97 (3H, s), 6.79 (1H, dd, $J = 8.8$, 0.7 Hz), 6.81 (1H, br s), 7.25-7.27 (1H, m), 7.56-7.66 (3H, m), 8.11-8.12 (1H, m), 8.41 (1H, d, $J = 2.4$ Hz).

EI-MSm/z: 499 (M^+).

[0847]

2) The title compound

Under argon atmosphere, and at room temperature, a suspension of tri-n-butyltin cyanide (5.62 g) and tetrakis (triphenylphosphine)palladium(0) (7.70 g) in 1,2-dichloroethane (61 ml) was heated under reflux for 2 hours. After cooling with air, a solution of 6-[5-tert-butylcarbamoyl-2-(6-methoxy-3-pyridyl)-2H-pyrazol-3-yl]-3-pyridyl trifluoromethanesulfonate (2.22 g) in 1,2-dichloroethane (50 ml) was added dropwise to the reaction liquid, and the mixture was heated under reflux for another 22 hours. After cooling with air, saturated aqueous sodium bicarbonate was added to the reaction liquid, and the mixture was stirred. The reaction liquid was filtered through celite, and the chloroform was added to the filtrate and the phases were separated. The organic layer was dried over anhydrous sodium sulfate. After filtration, the solvent was evaporated under reduced pressure, and the residue was purified by column chromatography on silica gel (ethyl acetate-hexane) to give the title compound (1.50 g, 90%) as a solid.

[0848]

$^1\text{H-NMR}$ (400 MHz, CDCl_3) δ : 1.47 (9H, s), 3.97 (3H, s), 6.79–6.81 (2H, m), 7.33 (1H, s), 7.57–7.60 (2H, m), 7.95–7.97 (1H, m), 8.09 (1H, d, $J = 2.9$ Hz), 8.68 (1H, d, $J = 2.2$ Hz).

EI-MSm/z: 376 (M^+).

[0928]

[Example 26]

N-tert-Butyl-5-(5-hydroxymethyl-2-pyridyl)-1-(3-pyridyl)-1H-pyrazole-3-carboxamide

[0929]

[Chem 130]

[0930]

1) The title compound

Under argon atmosphere, a 1.01M solution of diisobutylaluminum hydride in toluene (4.25 ml) was added dropwise to a suspension of the N-tert-butyl-5-(5-cyano-2-pyridyl)-1-(3-pyridyl)-1H-pyrazole-3-carboxamide (0.929 g) of Example 23 in tetrahydrofuran (19 ml) at 0°C, and the mixture was stirred for 70 minutes. Another portion of the 1.01M solution of diisobutylaluminum hydride in toluene (4.25 ml) was added dropwise, and the mixture was stirred for 80 minutes. A 4N aqueous hydrochloric acid (10 ml) was added to the reaction liquid, and the mixture was stirred at room temperature for 45 minutes, and water and chloroform were added to the reaction liquid and the phases were separated. The organic layer was dried over anhydrous sodium sulfate. The aqueous layer obtained in this phase separation process was designated [Solution A], and it was used in the next step (2). After filtration, the solvent was evaporated under reduced pressure, and to a solution of the residue in methanol (19 ml) was added sodium borohydride (0.223 g) at room temperature under argon atmosphere, and the mixture was stirred at room temperature for 13 hours. Saturated

aqueous sodium bicarbonate and chloroform were added to the reaction liquid and the phases were separated, and the organic layer was dried over anhydrous sodium sulfate. After filtration, the solvent was evaporated under reduced pressure, and the residue was purified by thin layer chromatography on silica gel (methanol-chloroform) to give the title compound (0.152 g, 16%) as a solid.

[0931]

$^1\text{H-NMR}$ (400 MHz, CDCl_3) δ : 1.48 (9H, s), 4.71-4.72 (2H, m), 6.85 (1H, br s), 7.18 (1H, d, $J = 0.7$ Hz), 7.34-7.37 (1H, m), 7.48 (1H, d, $J = 8.1$ Hz), 7.73-7.78 (2H, m), 8.39-8.40 (1H, m), 8.51 (1H, d, $J = 2.7$ Hz), 8.57 (1H, d, $J = 4.2$ Hz).

FAB-MSm/z: 352 ($\text{M}+\text{H}$) $^+$.

Elementary analysis: for $\text{C}_{19}\text{H}_{21}\text{N}_5\text{O}_2 \cdot 0.25\text{H}_2\text{O}$

Calculated: C, 64.12; H, 6.09; N, 19.68.

Found: C, 64.23; H, 6.10; N, 19.68.

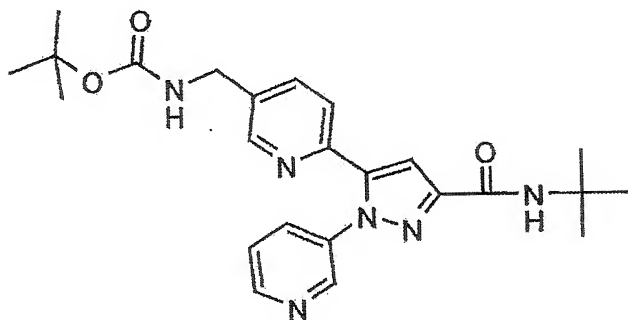

[0932]

[1096]

[Example 64]

N-(1-Hydroxymethylcyclohexan-1-yl)-1-(6-methoxy-3-pyridazinyl)-5-(2-pyridyl)-1H-pyrazole-3-carboxamide

[1097]

[Chem 169]

[1098]

Triethylamine (1.40 ml) and isobutylchloroformate (1.30 ml) were added to a solution of 1-[(tert-butoxycarbonyl)amino]cyclohexanecarboxylic acid (2.43 g) in tetrahydrofuran (20 ml) at -10°C , and the mixture was stirred for 20 minutes. A solution of sodium borohydride (1.14 g) in water (15 ml) was added to the reaction liquid, and the mixture was stirred for 1.5 hours. Water and ethyl acetate were added to the reaction liquid and the phases were separated, and the organic layer was dried over anhydrous magnesium sulfate. After filtration, the solvent was evaporated under reduced pressure, and the residue was purified by column chromatography on silica gel (ethyl acetate-n-hexane) to give 1-(hydroxymethyl)cyclohexylcarbamic acid tert-butyl ester (1.50 g, 65%) as a solid. This carbamic acid derivative (1.50 g) was dissolved in a 4N solution of hydrochloric acid in 1,4-dioxane (20 ml), and the mixture was stirred at room temperature for 7.5 hours. The reaction solvent was evaporated under reduced pressure, and to the residue were added the 1-(6-methoxy-3-pyridazinyl)-5-(2-pyridyl)-1H-pyrazole-3-carboxylic acid (1.30 g) of Referential Example 9, 1-hydroxybenzotriazole (0.803 g), and N,N-dimethylformamide (30 ml). Next, triethylamine (1.83 ml)

and 1-(3-dimethylaminopropyl)-3-ethylcarbodiimide hydrochloride (1.01 g) were added to this suspension at room temperature, and the mixture was stirred for 18.5 hours. The reaction solvent was evaporated under reduced pressure, and ethyl acetate and saturated aqueous sodium bicarbonate were added to the residue and the phases were separated. The aqueous layer was extracted with ethyl acetate, and the combined organic layers were dried over anhydrous sodium sulfate. After filtration, the solvent was evaporated under reduced pressure, and the residue was purified by column chromatography on silica gel (hexane-ethyl acetate) to give the title compound (991 mg, 36%) as a solid.

[1099]

[Chem 200]

[1222]

1)

N-tert-Butyl-5-[5-(tert-butoxycarbonylamino)-2-pyrazinyl]-1-(3-pyridyl)-1H-pyrazole-3-carboxamide

The procedure of Example 1 was repeated by using the 5-[5-(tert-butoxycarbonylamino)-2-pyrazinyl]-1-(3-pyridyl)-1H-pyrazole-3-carboxylic acid (0.279 g) of Referential Example 57 and tert-butylamine (0.152 ml) to give N-tert-butyl-5-[5-(tert-butoxycarbonylamino)-2-pyrazinyl]-1-(3-pyridyl)-1H-pyrazole-3-carboxamide (0.236 g, 74%) as a solid.

[1223]

$^1\text{H-NMR}$ (400 MHz, CDCl_3) δ : 1.50 (9H, s), 1.53 (9H, s), 6.83 (1H, s), 7.24 (1H, m), 7.36-7.39 (2H, m), 7.74-7.77 (1H, m), 8.40 (1H, d, $J = 1.0$ Hz), 8.58 (1H, d, $J = 2.4$ Hz), 8.63 (1H, dd, $J = 4.9, 1.0$ Hz), 9.09-9.10 (1H, m).

EI-MSm/z: 437 (M^+).

[1224]

2) The title compound

Trifluoroacetic acid (2.3 ml) was added to a solution of N-tert-butyl-5-[5-(tert-butoxycarbonylamino)-2-pyrazinyl]-1-(3-pyridyl)-1H-pyrazole-3-carboxamide (0.230 g) in dichloromethane (4.6

ml) at 0°C, and the mixture was stirred for 90 minutes, and the mixture was stirred for another 90 minutes at room temperature. Saturated aqueous sodium bicarbonate and chloroform were added to the reaction liquid and the phases were separated, and the organic layer was dried over anhydrous sodium sulfate. After filtration, the solvent was evaporated under reduced pressure, and the residue was purified by column chromatography on silica gel (methanol-chloroform) to give the title compound (0.160 g, 89%) as a solid.

[1225]

¹H-NMR (400 MHz, CDCl₃)δ: 1.49 (9H, s), 4.78 (2H, s), 6.83 (1H, s), 7.14 (1H, m), 7.37 (1H, dd, J = 8.2, 4.8 Hz), 7.75-7.80 (2H, m), 8.19 (1H, d, J = 1.2 Hz), 8.58-8.61 (2H, m).

EI-MSm/z: 337 (M⁺).

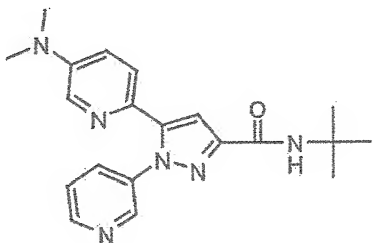

[1226]

[Example 96]

N-tert-Butyl-5-(5-dimethylamino-2-pyridyl)-1-(3-pyridyl)-1H-pyrazole-3-carboxamide

[1227]

[Chem 201]

[1228]

To a solution of the N-tert-butyl-5-(5-amino-2-pyridyl)-1-(3-pyridyl)-1H-pyrazole-3-carboxamide (95 mg) of Example 71 in ethanol (10 ml) were added 1N aqueous hydrochloric acid (127 μ l), 37% aqueous formalin (361 μ l), and platinum oxide (IV) (32 mg), and the mixture was vigorously shaken at room temperature for 1 hour under hydrogen (3.5 atm) atmosphere. The catalyst in the reaction liquid was removed by filtration, and the solvent was evaporated under reduced pressure. Ethyl acetate and saturated aqueous sodium bicarbonate were added to the residue and the phases were separated, and the organic layer was washed with brine and dried over anhydrous sodium sulfate. After filtration, the solvent was evaporated under reduced pressure, and the residue was purified by thin layer chromatography on silica gel (methanol-chloroform) to give the title compound (32 mg, 41%) as a solid.

[1229]

[Example 123]

N-tert-Butyl-5-(5-cyano-2-pyridyl)-1-(3-pyridyl)-1H-pyrazole-3-carboxamide (An alternative for the synthesis of Example 23)

The procedure of Example 7 was repeated by using the 5-(5-cyano-2-pyridyl)-1-(3-pyridyl)-1H-pyrazole-3-carboxylic acid (3.50 g) of Referential Example 73 and tert-butylamine (2.53 ml) to give the title compound (3.40 g, 82%) as a solid.

[1347]

¹H-NMR (400 MHz, CDCl₃)δ: 1.49 (9H, s), 6.82 (1H, s), 7.37 (1H, s), 7.41 (1H, q, J = 4.4 Hz), 7.67 (1H, d, J = 8.3 Hz), 7.74 (1H, d, J = 6.6 Hz), 8.01 (1H, dd, J = 8.2, 2.1 Hz), 8.55 (1H, d, J = 2.2 Hz), 8.63-8.67 (2H, m).

[1348]

[Example 124]

N-tert-Butyl-5-(5-hydroxymethyl-2-pyridyl)-1-(3-pyridyl)-1H-pyrazole-3-carboxamide (An alternative for the synthesis of Example 26)

Nickel-silica/alumina (content, about 65%; 1.0 g) was added to a solution of the N-tert-butyl-5-(5-cyano-2-pyridyl)-1-(3-pyridyl)-1H-pyrazole-3-carboxamide (2.04 g) of Example 123 in a 2M solution of ammonia in ethanol (50 ml), and the mixture was stirred in an autoclave under hydrogen atmosphere (8 atm) at 120°C for 2.5 hours. After cooling with air, the reaction liquid was filtered through celite, and the solvent was evaporated under reduced pressure. The residue was dissolved in water (100 ml) and acetic acid (20 ml), and sodium nitrite (2.03 g) was added at room temperature, and the mixture was stirred for 2 hours. After adding chloroform (150 ml) to the ice cold reaction liquid, sodium bicarbonate was gradually added until the bubbling stopped to render the solution basic. The organic layer was separated, and the aqueous layer was extracted with a mixed solvent of methanol-chloroform (1:10).

The combined organic layers were dried over anhydrous sodium sulfate. After filtration, the solvent was evaporated under reduced pressure, and the residue was purified by column chromatography on silica gel (methanol-chloroform) to give the title compound (820 mg, 39%).

[1349]

$^1\text{H-NMR}$ (400 MHz, CDCl_3) δ : 1.49 (9H, s), 2.30 (1H, s), 4.73 (2H, s), 6.85 (1H, s), 7.19 (1H, s), 7.36 (1H, dd, $J = 8.1, 4.9$ Hz), 7.49 (1H, d, $J = 8.1$ Hz), 7.74-7.79 (2H, m), 8.40 (1H, s), 8.52 (1H, d, $J = 2.4$ Hz), 8.59 (1H, dd, $J = 4.8, 1.6$ Hz).

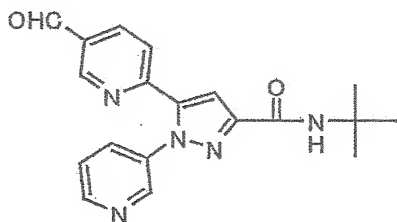

[1350]

[Example 125]

N-tert-Butyl-5-(5-formyl-2-pyridyl)-1-(3-pyridyl)-1H-pyrazole-3-carboxamide

[1351]

[Chem 228]

[1352]

To a solution of the N-tert-butyl-5-(5-hydroxymethyl-2-pyridyl)-1-(3-pyridyl)-1H-pyrazole-3-carboxamide (807 mg) of Example 124 in dichloromethane (50 ml) was added

1,1,1-tris(acetoxy)-1,1-dihydro-1,2-benziodoxol-3-(1H)-one

(Dess-Martin reagent, 1.21 g) at room temperature, and the mixture was stirred overnight. 1N aqueous sodium hydroxide (50 ml) and chloroform were added to the reaction liquid and the phases were separated, and the organic layer was dried over anhydrous sodium sulfate. After filtration, the solvent was evaporated under reduced pressure, and the residue was purified by column chromatography on silica gel (hexane-ethyl acetate) to give the title compound (676 mg, 84%) as an amorphous product.

[1353]

$^1\text{H-NMR}$ (400 MHz, CDCl_3) δ : 1.50 (9H, s), 6.84 (1H, s), 7.38-7.42 (1H, m), 7.39 (1H, d, $J = 4.9$ Hz), 7.71 (1H, d, $J = 8.1$ Hz), 7.77 (1H, t, $J = 4.2$ Hz), 8.22 (1H, dd, $J = 8.2, 2.1$ Hz), 8.56 (1H, d, $J = 2.4$ Hz), 8.65 (1H, dd, $J = 4.9, 1.5$ Hz), 8.84 (1H, d, $J = 2.2$ Hz), 10.07 (1H, s).

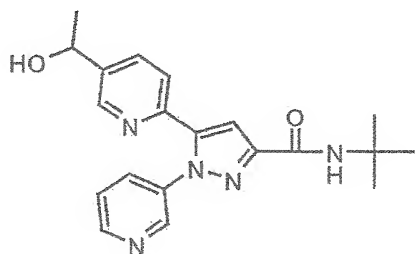

[1354]

[Example 126]

N-tert-Butyl-5-[5-(1-hydroxyethyl)-2-pyridyl]-1-(3-pyridyl)-1H-pyrazole-3-carboxamide

[1355]

[Chem 229]

[1356]

Methyl magnesium bromide (0.90M solution in tetrahydrofuran, 286 μ l) was added dropwise to a solution of the N-tert-butyl-5-(5-formyl-2-pyridyl)-1-(3-pyridyl)-1H-pyrazole-3-carboxamide (75.0 mg) of Example 125 in tetrahydrofuran (5 ml) at -78°C under argon atmosphere, and the mixture was stirred for 18 minutes. Water and chloroform were added to the reaction liquid and the phases were separated, and the organic layer was dried over anhydrous sodium sulfate. After filtration, the solvent was evaporated under reduced pressure, and the residue was purified by thin layer chromatography on silica gel (ethyl acetate) to give the title compound (34 mg, 43%) as an oily product.

[1357]

1)

N-Ethyl-N-methyl-5-(5-hydroxy-2-pyridyl)-1-(6-methoxy-3-pyridyl)-1H-pyrazole-3-carboxamide

To a solution of the N-ethyl-N-methyl-5-(5-benzyloxy-2-pyridyl)-1-(6-methoxy-3-pyridyl)-1H-pyrazole-3-carboxamide (1.05 g) of Example 171 in ethanol (20 ml) and ethyl acetate (20 ml) was added 10% palladium on carbon (50% wet, 700 mg), and the mixture was stirred for 1 hour under hydrogen atmosphere. After removing the catalyst by filtration, the solvent was evaporated under reduced pressure to give N-ethyl-N-methyl-5-(5-hydroxy-2-pyridyl)-1-(6-methoxy-3-pyridyl)-1H-pyrazole-3-carboxamide (840 mg, measured) as a solid.

[1545]

$^1\text{H-NMR}$ (400 MHz, CDCl_3) δ : 1.20-1.28 (3H, m), 3.09 (1/2 x 3H, s), 3.35 (1/2 x 3H, s), 3.58 (1/2 x 2H, q, $J = 7.1$ Hz), 3.79 (1/2 x 2H, q, $J = 7.1$ Hz), 3.90 (1/2 x 3H, s), 3.91 (1/2 x 3H, s), 6.68 (1H, d, $J = 8.8$ Hz), 6.89 (1H, d, $J = 6.8$ Hz), 7.05-7.10 (2H, m), 7.46-7.50 (1H, m), 8.06-8.10 (2H, m).

EI-MSm/z: 353 (M^+).

2) The title compound

Potassium carbonate (235 mg) and 2-bromoacetamide (141 mg) were added to a solution of the N-ethyl-N-methyl-5-(5-hydroxy-2-pyridyl)-1-(6-methoxy-3-pyridyl)-1H-pyrazole-3-carboxamide (300 mg) in N,N-dimethylformamide (5 ml) at room temperature, and the mixture was stirred for 20 hours. Water and ethyl acetate were added to the reaction liquid and the phases were separated, and the organic layer was dried over anhydrous magnesium sulfate. After filtration, the solvent was evaporated under reduced pressure, and the residue was purified by thin layer chromatography on silica gel (methanol-dichloromethane) to give the title compound (120 mg, 37%) as a solid.

[1546]

$^1\text{H-NMR}$ (400 MHz, DMSO-d_6) δ : 1.11-1.21 (3H, m), 2.99 (1/2 x 3H, s), 3.29 (1/2 x 3H, s), 3.47 (1/2 x 2H, q, $J = 6.8$ Hz), 3.71 (1/2 x 2H, q, $J = 6.8$ Hz), 3.89 (3H, s), 4.54 (2H, s), 6.87 (1H, d, $J = 8.8$ Hz), 7.06 (1H, d, $J = 11.5$ Hz), 7.40-7.43 (2H, m), 7.58-7.70 (3H, m), 8.13-8.30 (2H, m).

EI-MSm/z: 410 (M^+).

[Example 185]

N-Ethyl-N-methyl-5-[5-(3,3-dimethylureidomethyl)-2-pyridyl]-1-(6-methoxy-3-pyridyl)-1H-pyrazole-3-carboxamide

[1597]

[Chem 286]

[1598]

Triethylamine (0.15 ml) and N,N-dimethylcarbamic chloride (110 μ l) were added to a solution of the N-ethyl-N-methyl-5-(5-aminomethyl-2-pyridyl)-1-(6-methoxy-3-pyridyl)-1H-pyrazole-3-carboxamide (340 mg) of Example 184(1) in dichloromethane (20 ml) at room temperature, and the mixture was stirred for 15 hours. Water was added to the reaction liquid and the phases were separated, and the organic layer was dried over anhydrous magnesium sulfate. After filtration, the solvent was evaporated under reduced pressure, and the residue was purified by thin layer chromatography on silica gel (methanol-dichloromethane) to give the title compound (190 mg, 46%) as a solid.

EI-MSm/z: 368 (M^+).

[1649]

[Test Example 1] Inhibitory effect on platelet coagulation

Human blood was collected by using 1/10 volume of 3.13% sodium citrate as an anticoagulant, and the blood was centrifuged at 180 g for 10 minutes to separate platelet rich plasma (PRP), which was the upper layer. After collecting the upper layer PRP, the remaining lower layer was centrifuged at 1600 g for 10 minutes, and platelet poor plasma (PPP) in the upper layer was collected. 1 μl solution of the compound of the Examples was added to 200 μl of the PRP, and after allowing

the sample to stand at 37°C for 2 minutes, 2 μ l of collagen was added in order to induce platelet coagulation. Platelet coagulation rate was measured with PAM-12C (SSR Engineering). Light transmittance of the PPP was used as the value indicating 100% coagulation, and the coagulation rate was measured at various concentrations of the compounds of the Examples to calculate the value of IC_{50} . The results are shown in Table 1.

[1650]

[Test Example 2] Inhibitory effects on cyclooxygenase-1 (COX-1) and cyclooxygenase-2 (COX-2)

Inhibitory activity against COX-1 and COX-2 of the compounds produced in the Examples was measured by using COX Inhibitor Screening Assay Kit (Catalog Nos. 560101 and 560121) purchased from Cayman Chemical Company.

Before starting the measurement, reaction buffer, heme, arachidonic acid, $SnCl_2$, EIA buffer, washing buffer, prostaglandin (PG) screening EIA standard, PG screening acetylcholine esterase (AChE), tracer (chromogenic enzyme HRP conjugate), and PG screening EIA antiserum were prepared ready for use.

(1) Production of $PGF_2\alpha$ by COX-1 or COX-2

The reaction mixture containing the compound of the Examples (50 μ M) and COX-1 or COX-2 was allowed to stand at 37°C for 10 minutes, and after adding 10 μ l of arachidonic acid, the solution was again allowed to stand at 37°C for 2 minutes. After the reaction, the reaction was terminated by adding 50 μ l of 1N-hydrochloric acid, and 100 μ l solution of $SnCl_2$ was added, and the reaction mixture was allowed to stand at room temperature for 5 minutes.

(2) Quantitative determination of $\text{PGF}_2\alpha$ by ELISA

50 μl of antiserum (rabbit anti- $\text{PGF}_2\alpha$ antibody) was placed in the wells of 96 well plate that had been coated with mouse anti-rabbit IgG, and 50 μl of the 2000-fold diluted $\text{PGF}_2\alpha$ -containing liquid described above and 50 μl of AchE tracer were added to the well in this order, and the mixture was allowed to stand at room temperature for 18 hours. The wells were washed 5 times with the washing buffer to remove an excessive AchE tracer, and 200 μl of Ellman reagent was added. After leaving the plate in a dark room for 60 minutes, absorbance was measured at 405 nm.

(3) Calculation of inhibitory activity of the compound of the Examples

A calibration curve was obtained by using the PG screening EIA standard, and the amount of $\text{PGF}_2\alpha$ produced was determined from the absorption. Inhibitory rate at 50 μM of the compound of the Examples against COX-1 or COX-2 was calculated. The results are shown in Table 1.

It is to be noted that the inhibitory rate was calculated in relation to the amount of the $\text{PGF}_2\alpha$ produced by the reaction liquid free from the compounds of the Examples, which was taken 100%.

[1651]

Table 1

Compound (Example No.)	Inhibition of collagen-induced platelet coagulation, IC ₅₀ (μM)	Inhibitory effect against COX-1 at 50 μM (% inhibition)	Inhibitory effect against COX-2 at 50 μM (% inhibition)
4	0. 1 2	- 1. 5	- 1. 9
8	0. 0 1 8	- 3. 3	3. 9
1 3	0. 0 1 8	1 3. 9	9. 2
1 5	0. 0 2 9	3 9. 5	6. 9
2 2	0. 2 1	0. 8	4. 2
2 5	0. 0 1 8	4. 7	8. 2
2 6	0. 0 6 5	5. 5	8. 2
2 8	0. 0 0 8 9	5. 4	7. 6
4 0	0. 0 6 5	7 2	1 4. 8
4 4	0. 1 4	4. 3	3. 6
4 8	0. 1 9	3. 6	8. 7
5 6	0. 0 9 2	- 1. 2	- 1. 7
6 5	0. 0 2	1 1. 6	- 1. 6
7 1	0. 0 2 3 1	7. 9	N.T.
7.4	0. 1 7	3 8. 8	N.T.
8 5	0. 0 5 4	N.T.	N.T.
9 5	0. 1 6	- 9. 1	N.T.
9 8	0. 0 4 3	- 2 0. 4	N.T.

1 3 2	0. 0 3 2	N.T.	N.T.
1 3 7	0. 2 3	- 5. 1	N.T.
1 3 8	0. 1 6	0. 7	N.T.
1 3 9	0. 0 7 1	- 2 5. 8	N.T.
1 5 2	0. 1 1	- 8. 7	N.T.

[1652]

As demonstrated in Table 1, the compound (I) of the present invention, its salt or solvate, or a solvate of such salt potentially inhibited platelet coagulation without inhibiting neither COX-1 nor COX-2.
